1. About this Guide

1.1. Document History

Product Version	Date (Release date)	Description
BizViz Data Preparation 1.0	August 31 st , 2017	First Release of the document
BizViz Data Preparation 1.1	December 11 th , 2017	Updated document
BizViz Data Preparation 1.2	April 15 th , 2018	Updated document

1.2. Overview

This guide covers:

- Introduction and steps to use the Big Data BizViz ETL plugin
- Configuration details for the Data Preparation components

1.3. Target Audience

This guide is aimed at business users of all skill levels who deal with vast amounts of data and requires data preparation to be attempted before getting informative insights from the collated business datasets.

2. Introduction

2.1. Introducing the Big Data BizViz Data Preparation

The BDB Data Preparation is a self-service data preparation tool that empowers data-driven Business users with powerful capabilities to extract, transform, and merge new data sources. The tool offers a range of components to transform and merge the selected dataset. Users can get analytics-ready data faster to generate valuable insights in less time.

2.2. Prerequisites and Supported Devices

- A browser that supports HTML5
- Operating System: Windows 7
- Basic understanding of the BizViz Server

3. Getting Started with the BDB Data Preparation

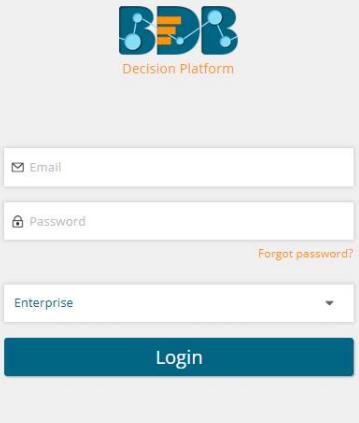

3.1. Accessing the BDB Data Preparation

This section explains how to access the BizViz Platform and a variety of plugins that it offers:

- i) Open BizViz Enterprise Platform Link: <http://apps.bdbbizviz.com/app/>
- ii) Enter your credentials to log in to the platform.
- iii) Click 'Login'

Welcome to Big Data BizViz (BDB)

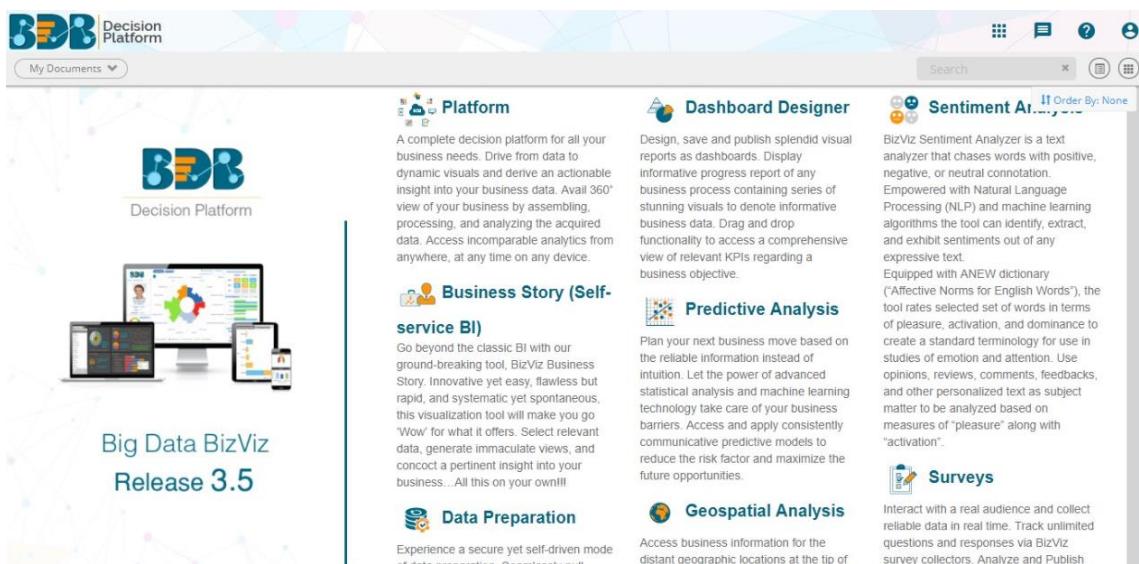

- Big Data Pipeline Framework
- Dashboard Designer
- ETL (Self-Service Data Preparation)
- Geospatial Analysis (Location Intelligence)
- Predictive Analysis
- Play (Beta Release)
- Self-Service BI (Business Story)
- Social Media Browser
- Sentiment Analysis
- Survey

The login form features the BDB logo at the top left. Below it are fields for 'Email' and 'Password', both with their respective icons. A 'Forgot password?' link is located to the right of the password field. A dropdown menu labeled 'Enterprise' is positioned below the password field. At the bottom right is a large teal 'Login' button.

Copyright © 2015-2018 BDB (BizViz Technologies Pvt Ltd)

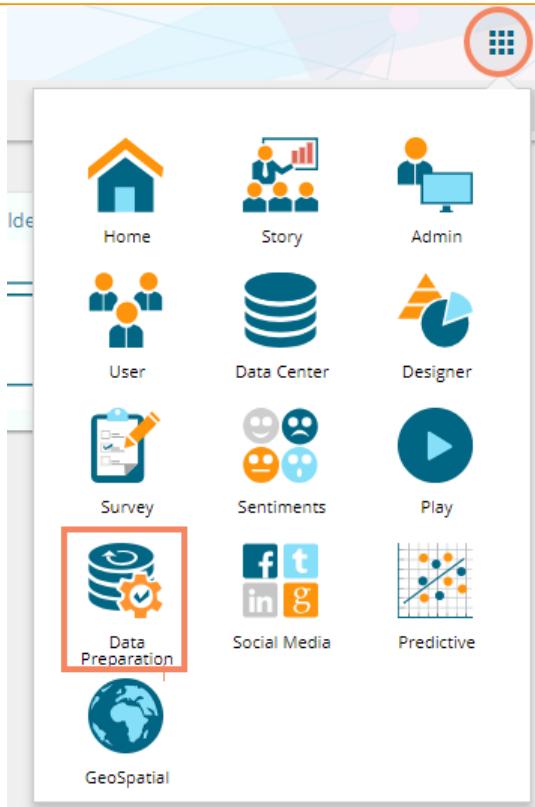

- iv) BizViz Platform home page will open.

The screenshot shows the BizViz Platform home page. At the top, there's a navigation bar with the BDB logo, a 'My Documents' dropdown, and various icons for search, dashboard, and user profile. The main content area has a light blue background with a network-like pattern. On the left, there's a large image of a computer monitor displaying various charts and graphs, with the text 'Big Data BizViz Release 3.5' overlaid. To the right, there are several sections with icons and titles:

- Platform**: A complete decision platform for all your business needs. Drive from data to dynamic visuals and derive an actionable insight into your business data. Avail 360° view of your business by assembling, processing, and analyzing the acquired data. Access incomparable analytics from anywhere, at any time on any device.
- Dashboard Designer**: Design, save and publish splendid visual reports as dashboards. Display informative progress report of any business process containing series of stunning visuals to denote informative business data. Drag and drop functionality to access a comprehensive view of relevant KPIs regarding a business objective.
- Business Story (Self-service BI)**: Go beyond the classic BI with our ground-breaking tool, BizViz Business Story. Innovative yet easy, flawless but rapid, and systematic yet spontaneous, this visualization tool will make you go 'Wow' for what it offers. Select relevant data, generate immaculate views, and concoct a pertinent insight into your business... All this on your own!!
- Predictive Analysis**: Plan your next business move based on the reliable information instead of intuition. Let the power of advanced statistical analysis and machine learning technology take care of your business barriers. Access and apply consistently communicative predictive models to reduce the risk factor and maximize the future opportunities.
- Data Preparation**: Experience a secure yet self-driven mode of data preparation.
- Geospatial Analysis**: Access business information for the distant geographic locations at the tip of your fingers.
- Sentiment Analyzer**: BizViz Sentiment Analyzer is a text analyzer that chases words with positive, negative, or neutral connotation. Empowered with Natural Language Processing (NLP) and machine learning algorithms the tool can identify, extract, and exhibit sentiments out of any expressive text. Equipped with ANEW dictionary ("Affective Norms for English Words"), the tool rates selected set of words in terms of pleasure, activation, and dominance to create a standard terminology for use in studies of emotion and attention. Use opinions, reviews, comments, feedbacks, and other personalized text as subject matter to be analyzed based on measures of "pleasure" along with "activation".
- Surveys**: Interact with a real audience and collect reliable data in real time. Track unlimited questions and responses via BizViz survey collectors. Analyze and Publish.

- v) Click on the 'App' menu option
 vi) All the available plugins will be listed in the displayed window
 vii) Select the 'Data Preparation' plugin

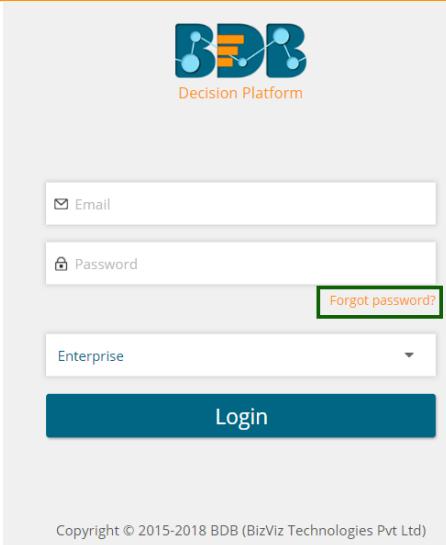

- i) Users will be redirected to the Data preparation landing page.
- ii) Users will find four major modules on the Data Preparation landing page:
 - a. My Workspace (Default Component)
 - b. Job
 - c. Trash
 - d. Scheduler

This document will describe all the major components and the related workflows at details.

3.2. Forgot Password Option

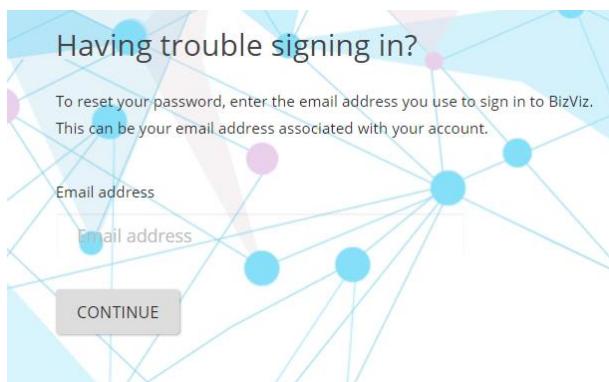

Users are provided with a choice to change the password on the Login page of the platform.

- i) Navigate to the Login page.
- ii) Click 'Forgot Password?' option.

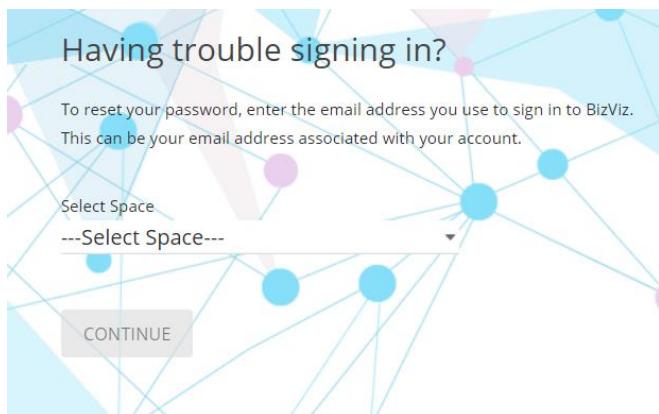

The image shows the BDB Decision Platform login interface. It features a logo with three interconnected nodes and the text 'Decision Platform'. Below the logo are two input fields: 'Email' and 'Password'. To the right of the password field is a green button labeled 'Forgot password?'. Underneath the password field is a dropdown menu set to 'Enterprise'. At the bottom is a large blue 'Login' button. At the very bottom of the page, there is a small copyright notice: 'Copyright © 2015-2018 BDB (BizViz Technologies Pvt Ltd)'.

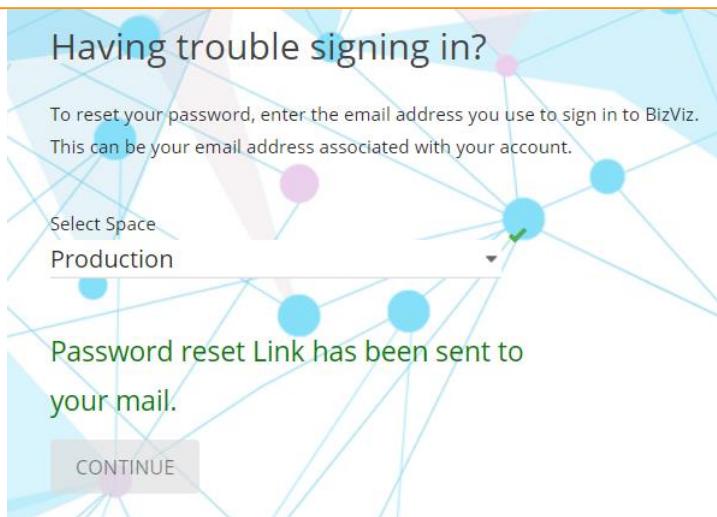

- iii) Users will be redirected to a new window.
- iv) Provide the email id that is registered with BDB to send the reset password link.
- v) Click the 'Continue' option.

- vi) Users will be redirected to select a space if needed and click the 'Continue' option.

- vii) A notification will appear stating that the reset password link has been sent to the registered email.

- viii) Click the link from your registered email
- ix) Users will be redirected to the ‘Reset Password’ page to set a new password
- x) Set a new password
- xi) Confirm the newly set password
- xii) Click ‘RESET PASSWORD’ option

- xiii) The password will be successfully reset for the selected BDB account.

4. Basic Features

The landing page of Data Preparation launches workspace view. ‘**My Workspace**’ will be displayed by default.

4.1. Workflow Editor

‘**My Workspace**’ is a placeholder for the workflows which are created using various data preparation components. Users can create the workflows using the workflow editor.

- i) Navigate to the ‘**Workspace**’ page.
- ii) Click ‘**New**’

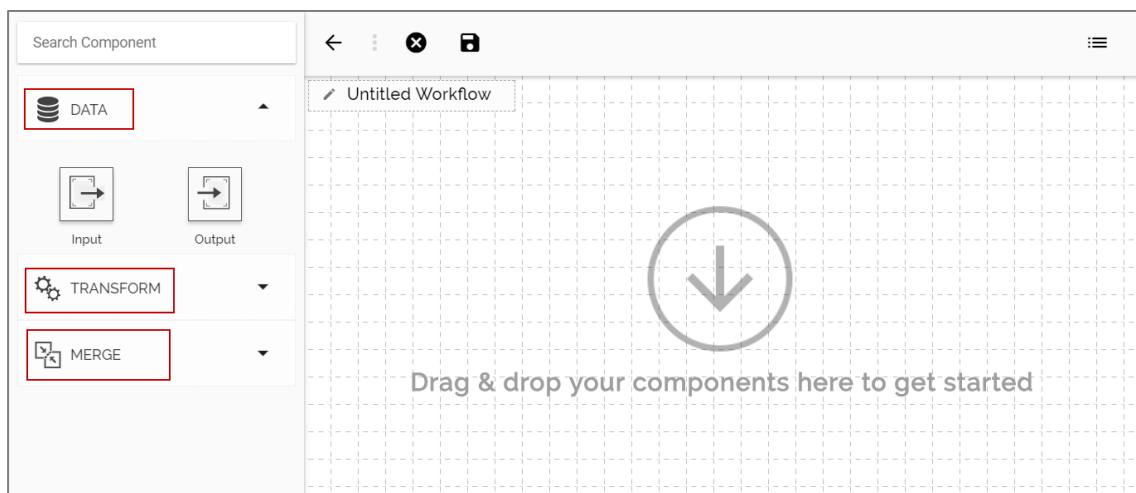

Data preparation 1.2.0

NEW

My Workspace (0)

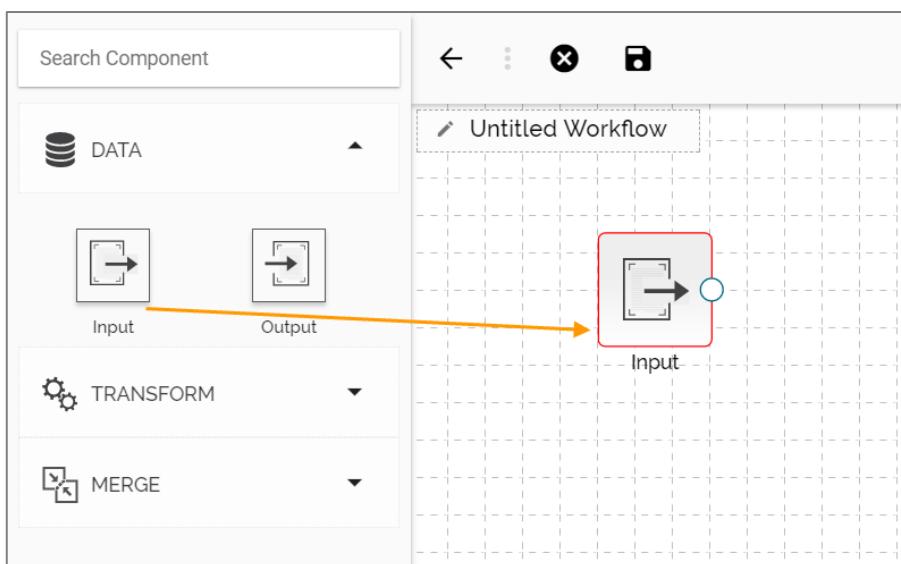

- My Workspace
- Job
- Trash
- Scheduler

- iii) Users will be redirected to the ‘Workflow Editor.’
- iv) The Workflow editor exposes users to 3 main aspects to autonomously prepare data:
 - a. Data
 - b. Transform
 - c. Merge

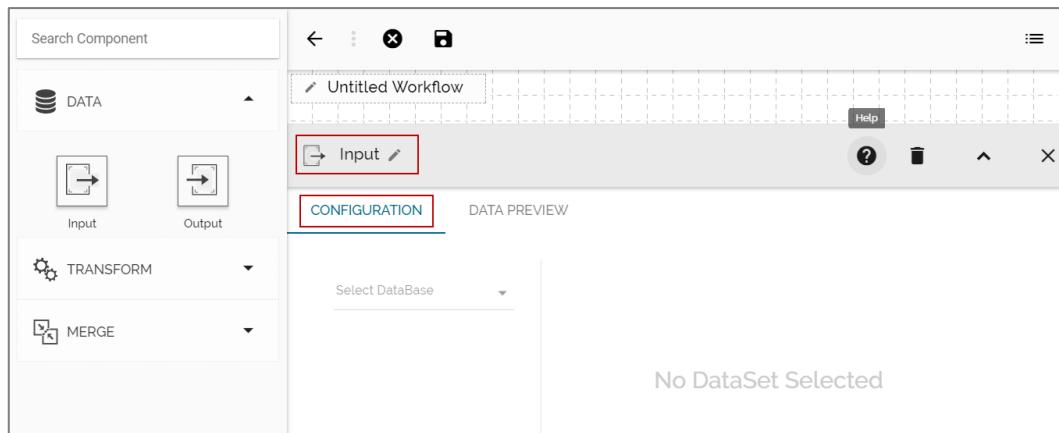

4.2. Extracting Data: Full and Incremental

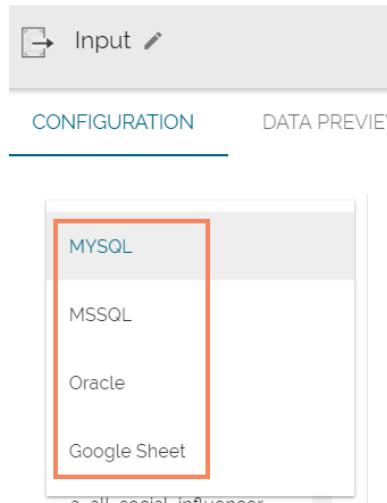

- i) Navigate to the Workflow Editor.
- ii) The ‘Data’ option will be selected by default.
- iii) Drag and Drop the ‘Input’ component onto the workflow editor.

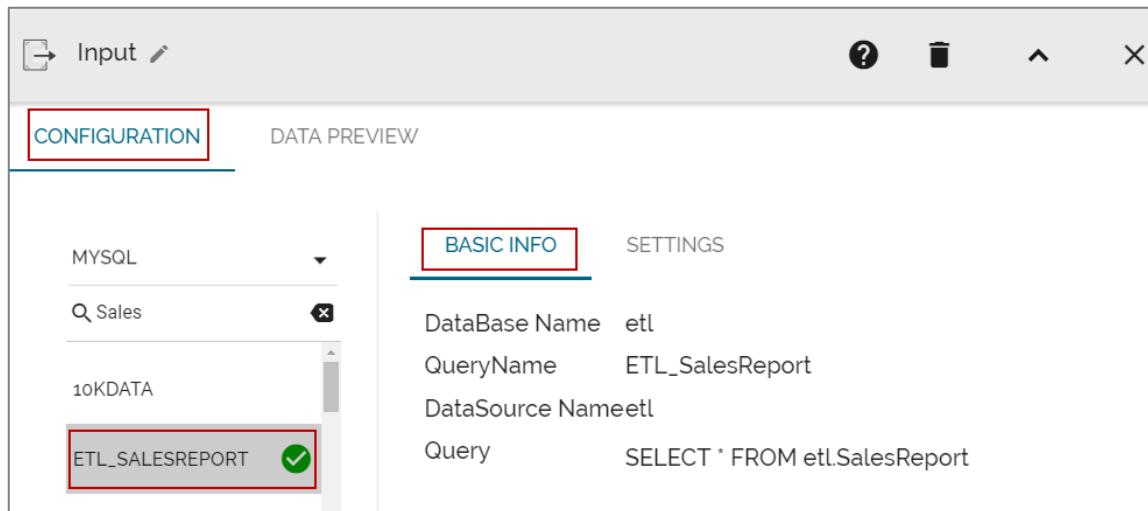

- iv) Use right-click on the dragged input component
- v) A new window will be displayed to configure the input data.

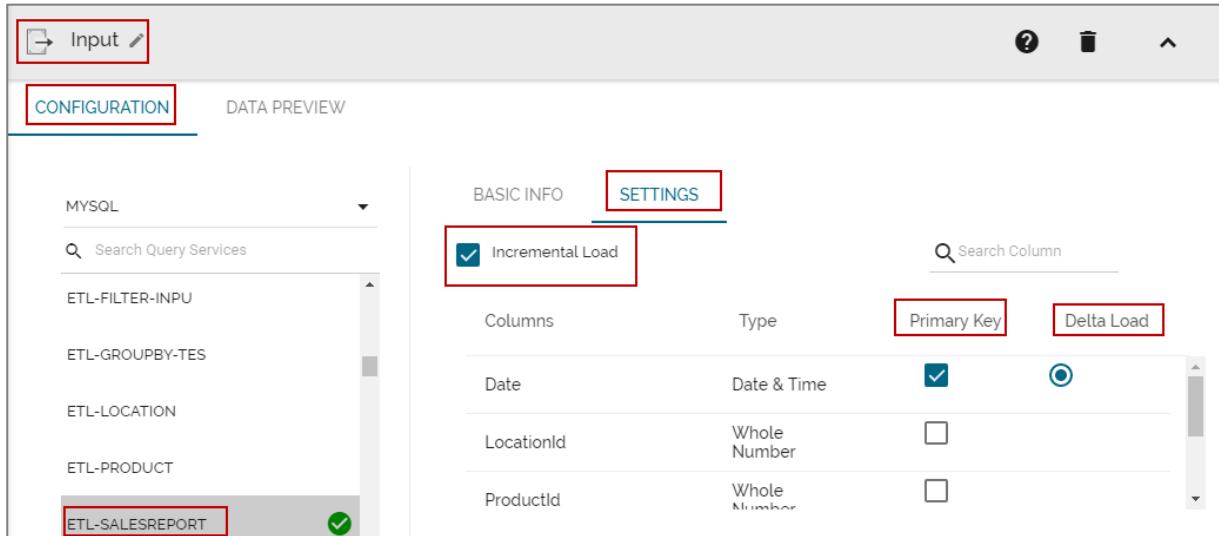

- vi) Select a database type using the drop-down menu (At present only MYSQL, MSSQL, Oracle, and Google Sheet are supported).

- vii) Selecting a database type will redirect users to the list of data sets based on the selected database.
- viii) Select a query service from the list.
- ix) The basic information of the database and query service will be displayed (By Default).

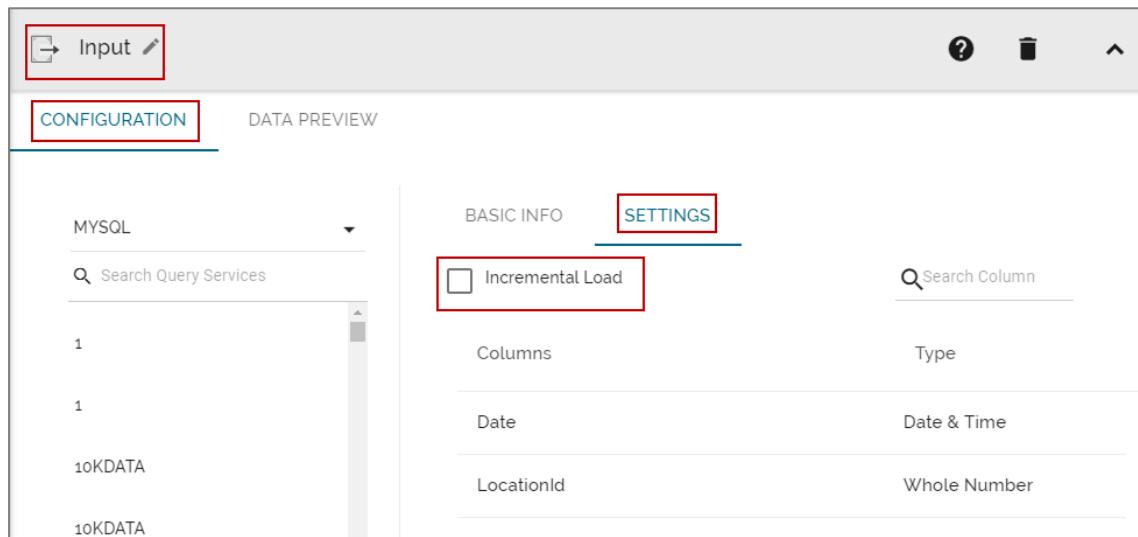

- x) Click the ‘Settings’ tab.
- xi) Users will be redirected to enable ‘Increment Load’ to access the recently updated data.
- xii) By enabling the ‘Increment Load,’ Users need to configure the following options:
 - a. ‘Primary Key’- Select a primary key of the data source.
 - b. ‘Delta Load’-Select a column of type timestamp or date or long which is updated whenever a new row is inserted or updated in the data source. This column will be used to perform the ‘Incremented Load’

The screenshot shows the 'Configuration' tab selected in the top navigation bar. Under 'BASIC INFO', the 'Incremental Load' checkbox is checked. In the 'SETTINGS' tab, under 'Primary Key', 'Date' is selected. Under 'Delta Load', 'Date & Time' is selected. The left sidebar lists various ETL components: MySQL, ETL-FILTER-INPU, ETL-GROUPBY-TE, ETL-LOCATION, ETL-PRODUCT, and ETL-SALESREPORT, with ETL-SALESREPORT currently selected.

Note: Users can choose not to enable the increment load. In this case, the following details will be displayed, and the full data will be extracted.

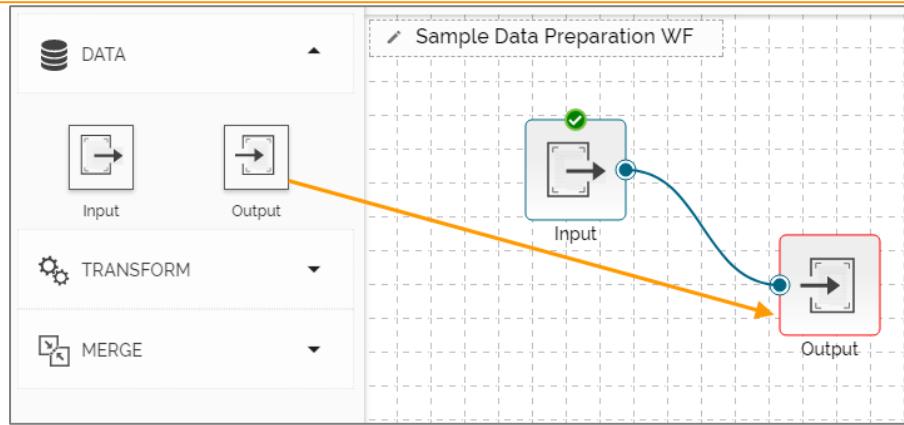

The screenshot shows the 'Configuration' tab selected. Under 'BASIC INFO', the 'Incremental Load' checkbox is unchecked. The 'SETTINGS' tab is visible. The left sidebar lists various ETL components: MySQL, ETL-FILTER-INPU, ETL-GROUPBY-TE, ETL-LOCATION, ETL-PRODUCT, and ETL-SALESREPORT, with ETL-SALESREPORT currently selected. The main panel displays a table with columns 'Columns' and 'Type', showing 'Date' as 'Date & Time' and 'LocationId' as 'Whole Number'. There are also two rows labeled '1' and '10KDATA'.

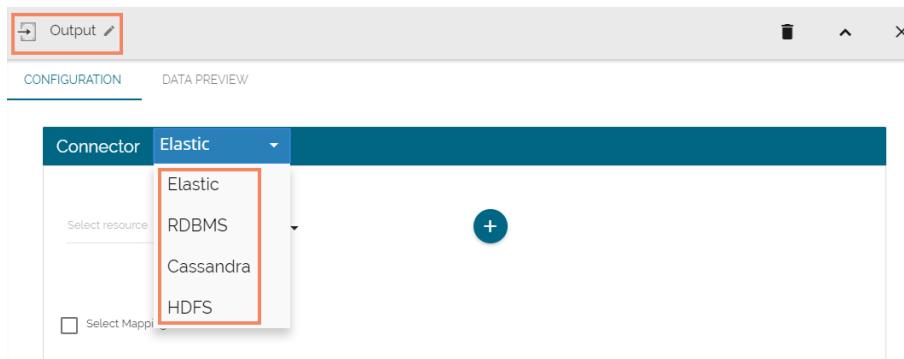

4.3. Loading Data

Users can load the extracted data into an elastic for visualization via the output component.

- i) Drag and drop the ‘Output’ component on the Workflow editor.
- ii) Connect it with the configured ‘Input’ component.

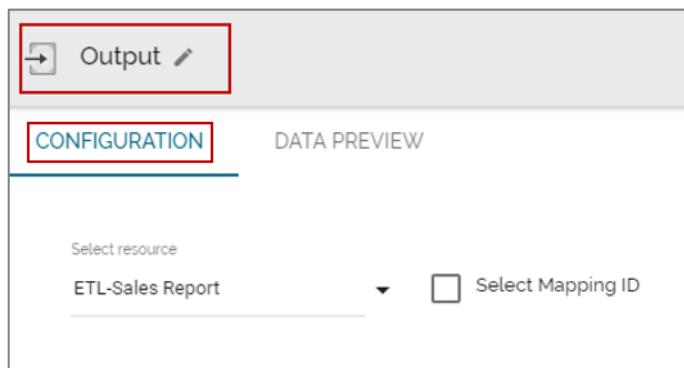

- iii) Click on the 'Output' component to display the 'CONFIGURATION' option.
- iv) Users will get the following options:
 - a. Elastic
 - b. RDBMS
 - c. Cassandra
 - d. HDFS
- v) Select an option and configure it

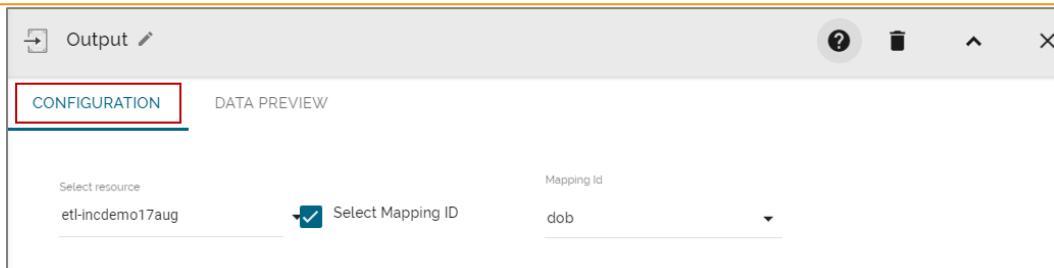

a. Configuring Elastic

- i. Select a resource using the drop-down menu (for the Elastic writer)
- ii. Enable 'Select Mapping ID' option-By enabling this choice users will be redirected to select a mapping id from the 'Mapping id' drop-down menu.

Note: If the 'Select Mapping Id' option is enabled, users will be asked to configure the mapping id using the drop-down menu:

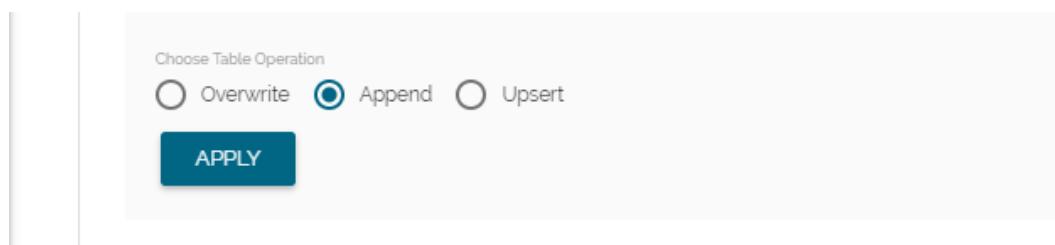

b. Configuring RDBMS

- Select a Data Source Type from the drop-down menu
- Select a Data Source Name from the drop-down menu
- Select a Database Name from the drop-down menu
- Select a Table Name from the drop-down menu
- Select 'ADD'  option to Create a New Table

vi. Choose Table Operation

- Overwrite: Using this function, the existing records will be overwritten in
- Append: Using this function, the records get added at the end of the elements
- Upsert: Using this function only the new records will be added to the file

vii. Click 'APPLY'

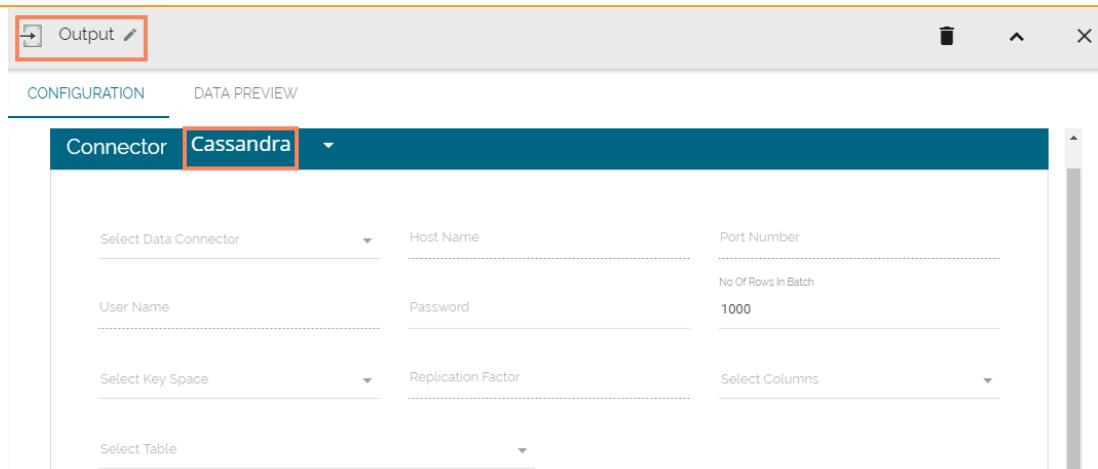

c. Configuring Cassandra

- Select a Data Connector from the drop-down menu
- Enter the Host Name
- Enter the Port Number
- Enter the User Name
- Enter the Password
- Enter No. of Rows in Batch

- vii. Select Key Space from the drop-down menu
- viii. Enter the Replication Factor
- ix. Select Columns from the drop-down menu
- x. Select a table from the drop-down menu
- xi. Consistency: Select a Consistency option from the drop-down menu
- xii. New Table: Provide a title to the newly created table using the ‘New Table’ field
- xiii. New time uuid column name: Provide a name for the new Time UUID Column

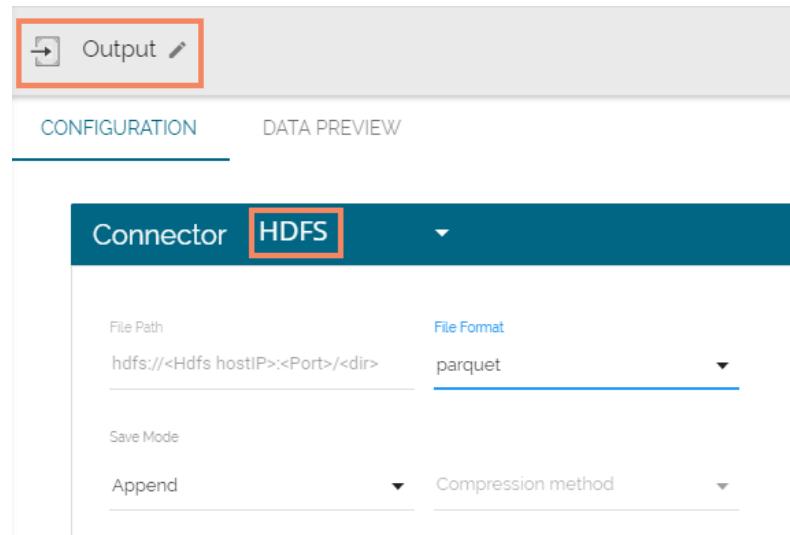

- xiv. **Headers:** All the columns from the data set will be listed.
- xv. **Partition Key:** The Partition Key determines which node stores the data. It is responsible for data distribution across the nodes.
 1. The UUID Column name gets displayed under the ‘Partition Key’ window.
 2. The user can select and move any column from ‘Header’ (Select Column) to ‘Partition Key’ space.
 3. The sequence of the columns listed under Partition Key can be arranged by using ‘Up’ or ‘Down’ options.
- xvi. **Clustering Key:** The Clustering Key is a storage engine process that sorts data within the partition. It determines per-partition clustering.
 1. The items listed under the Clustering Key box can be arranged by using ‘Up’ or ‘Down’ options.
 2. Users can select any column from ‘Headers’ (Select Column) to ‘Clustering Key’ space.

The screenshot shows the configuration interface for a Cassandra connector. The 'Connector' dropdown is set to 'Cassandra'. The 'Output' button at the top left is highlighted with a red box. The configuration fields include Host Name, Port Number, User Name, Password, Select Key Space, Replication Factor, Select Columns, and Select Table.

d. Configuring HDFS

- Provide file path
- Select a File Format from the below given choices in the drop-down menu
 - Parquet
 - Json
 - Avro
 - CSV
- Select a Save Mode from the below given options in the drop-down menu
 - Append
 - Overwrite
 - Error
 - Ignore
- Select a Compression Method from the below given options in the drop-down menu
 - Gzip
 - Snappy
 - None

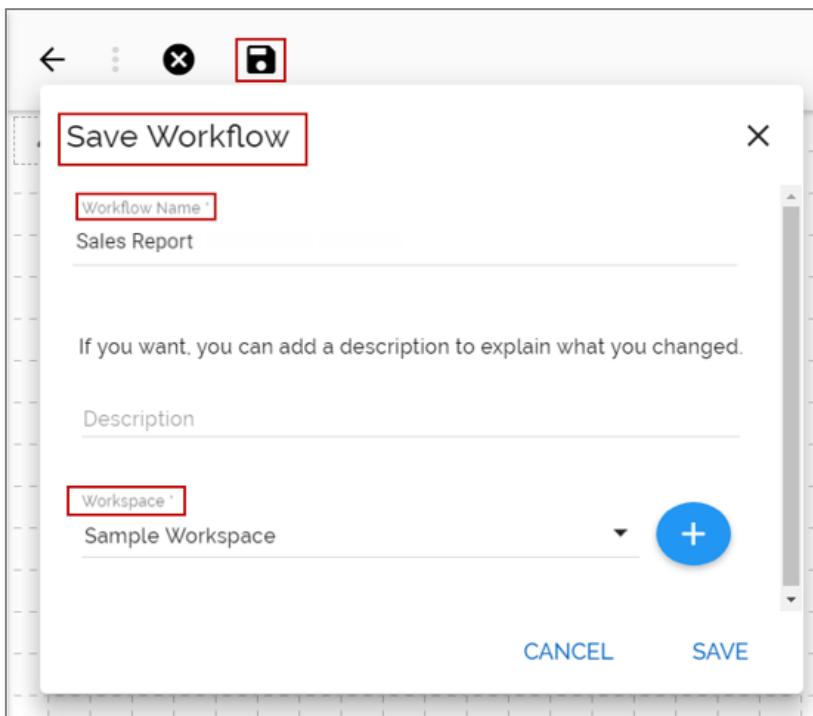

The screenshot shows the configuration interface for an HDFS connector. The 'Connector' dropdown is set to 'HDFS'. The 'Output' button at the top left is highlighted with a red box. The configuration fields include File Path (set to 'hdfs://<Hdfs hostIP>:<Port>/<dir>'), File Format (set to 'parquet'), Save Mode (set to 'Append'), and Compression method (set to 'none').

4.4. Saving a Workflow

Users are provided with two options to save a workflow.

- Click the 'Save' option 
- A new window pops-up to redirect the user to save the workflow.
 - Enter a Workflow name
 - Enter Description (Optional)
 - Select or Add a Workspace

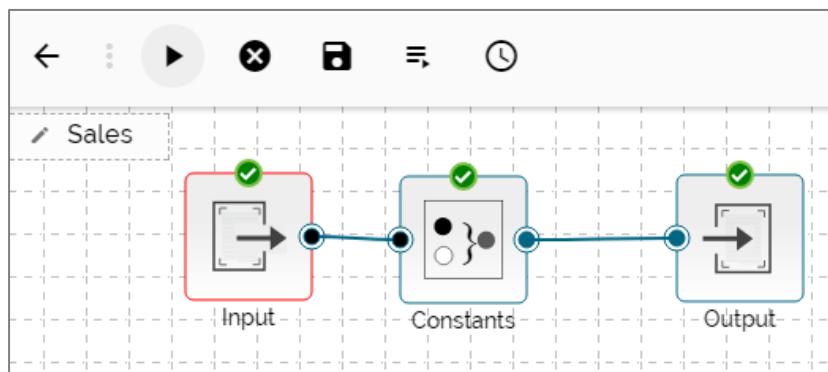

- iii) Click 'Save'

4.5. Run Preview

Users can run the created workflow without affecting their production system through 'Run Preview' option.
Users need to save the workflows to get the 'Run Preview' option.

- i) After saving a workflow, Users will be able to access more options on the workflow editor toolbar.
- ii) Click 'Run Preview' option ►
- iii) The ongoing execution process will be displayed through a continuous blue line.
- iv) Users will get notified about the beginning and end of the execution process by pop-up messages.
- v) After the execution gets completed a green tick mark will be displayed. The input data with a green checkmark is ready to preview.

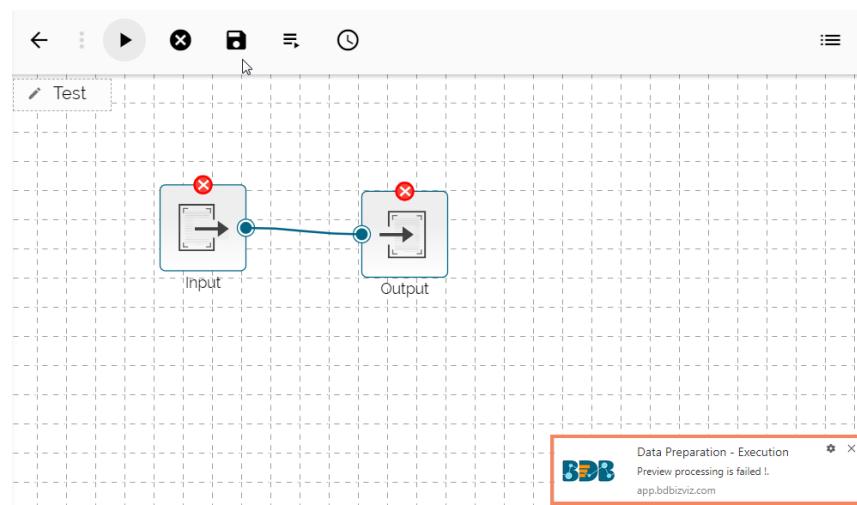

- vi) Open 'Data Preview' by clicking the input component to view the preview of the extracted data.

Input

DATA PREVIEW

dob	age	sal	joiningdateandtime	delta_status
1994-05-05	23	3000.92	2017-05-31T15:23:12.000+0530	insert
1993-09-23	24	3900.92	2017-03-21T15:43:12.000+0530	insert
1994-09-23	23	3000.92	2016-04-21T17:43:12.000+0530	insert
1992-07-23	27	4900.92	2014-05-21T16:43:12.000+0530	insert
1980-09-23	40	2300.92	2017-02-21T23:13:12.000+0530	insert

Note: users will get notifications on the screen for success or failure of the preview processing.

4.6. Save and Execute

By using the 'Save and Execute' option users can save and write a workflow in the metadata to create a datastore out of it.

- i) Click the 'Save' option.
- ii) A new window pops-up is redirecting the user to save the workflow.
 - a. Enter a Workflow name
 - b. Enter Description (Optional)
 - c. Select or Add a Workspace
- iii) Click 'Save.'

Save Workflow

Workflow Name *

Sales Report

If you want, you can add a description to explain what you changed.

Description

Workspace *

Sample Workspace

+ +

CANCEL **SAVE**

4.7. Schedule a Workflow

Users can schedule a created workflow for data refresh.

- i) Create a workflow
- ii) Save and run the workflow
- iii) Click the ‘Scheduler’  icon
- iv) Click a range of time
- v) Fill in the required information for the selected time range. E.g., The below-given image displays scheduler configuration details for the ‘DAILY’ option.
- vi) Click ‘SCHEDULE’.

* Sample Data Preparation Workflow

Schedule Workflow

DAILY WEEKLY MONTHLY YEARLY

Every 1 _____ day(s)

Every Week Day

Start time 12 : 00

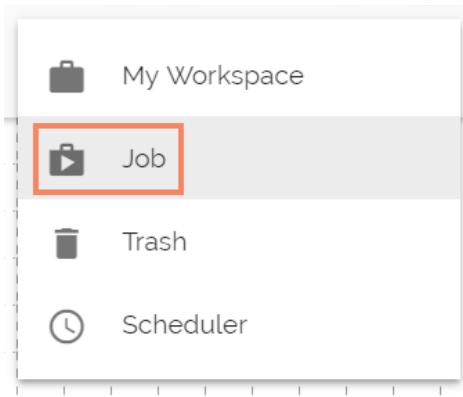

CANCEL **SCHEDULE**

- vii) The selected workflow will be scheduled.

4.8. Job

Users can see the job status for the saved workflows.

- i) Navigate to the Data Preparation landing page
- ii) Click  icon from the workflow editor
- iii) Select the 'Job' option from the menu list

- iv) Users will be displayed the job details in a table

Jobs (78)					Job
JOB	EXEC START TIME	LAST UPDATED DATE	STATUS		DETAILS
▶ SALES REPORT	9/28/2017, 3:31:42 PM	9/28/2017, 3:31:46 PM	FINISHED	...	ExecutionId 135397376 Execution Mode Execute Elapsed Duration 00:00:04
▶ SALES REPORT	9/28/2017, 2:48:42 PM	9/28/2017, 2:48:46 PM	FINISHED	...	
▶ SN	9/13/2017, 4:01:21 PM	9/13/2017, 4:01:22 PM	FAILED	...	
▶ WORKFLOW1	8/25/2017, 5:24:53 PM	8/25/2017, 5:24:58 PM	FINISHED	...	
▶ WORKFLOW1	8/25/2017, 5:22:40 PM	8/25/2017, 5:22:47 PM	FINISHED	...	
▶ CDRD	8/25/2017, 5:22:40 PM	8/25/2017, 5:22:47 PM	FAILED	...	

Note: The execution details will be displayed on the right-hand side of the 'Job' page. Users need to click on the 'STATUS' of a job using the list of the jobs.

4.9. Trash

The 'Trash' folder is provided to store all the deleted workflows and workspaces. Users can restore the deleted workflows and workspaces using this folder.

- i) Click on the 'Trash' option.
- ii) Users will be redirected to see all the deleted files and folders under the trash folder.
- iii) Click 'Restore' to restore the selected workflow/workspace.
- iv) Click 'Delete' to permanently delete the selected workflow/workspace.

Note:

- a. Users can check out all the essential features of the Data Preparation module on a relevant input dataset.
- b. Other options provided on the workflow editor are as described below:

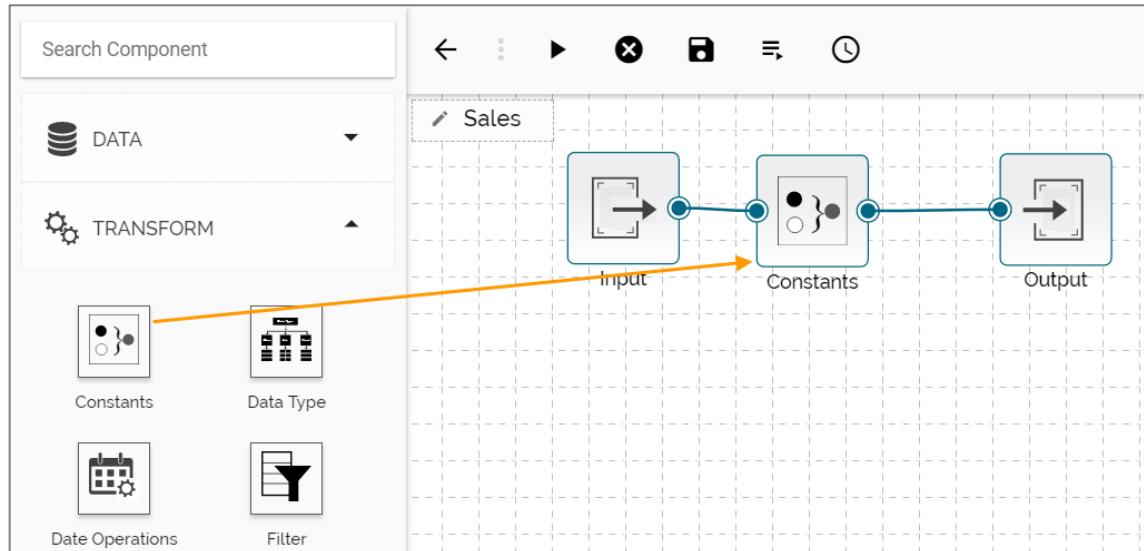

Icons	Name	Description
	Hide and Show Components	Hides or shows the components on the left-hand side.
	Clear Workflow	Clears the current workflow from the workflow editor.
	Save	Saves a workflow
	Navigator	Redirects Users to the following hyperlinks: 1. Workspace 2. Job 3. Trash 4. Scheduler

5. Transform

5.1. Constants

Users can give a corresponding valid constant value for each type of column.

- i) Navigate to the Workflow editor.
- ii) Connect the ‘Constants’ component to the configured input dataset.

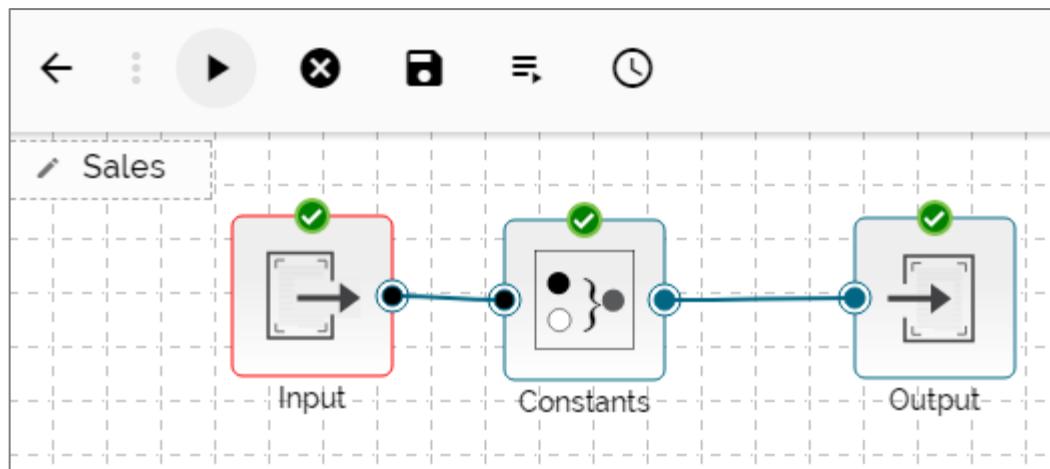

- iii) Configure the required details for the ‘Constants’ component:
 - a. Column Name: Select columns from input data
 - b. Column Type: Set column type using the drop-down menu
 - c. Constant: Set a constant value
 - d. Remove: Click the ‘Remove’ icon to remove the added constant information.

Column Name* (Select columns from input data)	Column Type* (Set column type)	Constant (Set constant value)
Date	Date	[current date]

ADD NEW COLUMN

- iv) Save the workflow.
- v) Run/Execute the workflow.

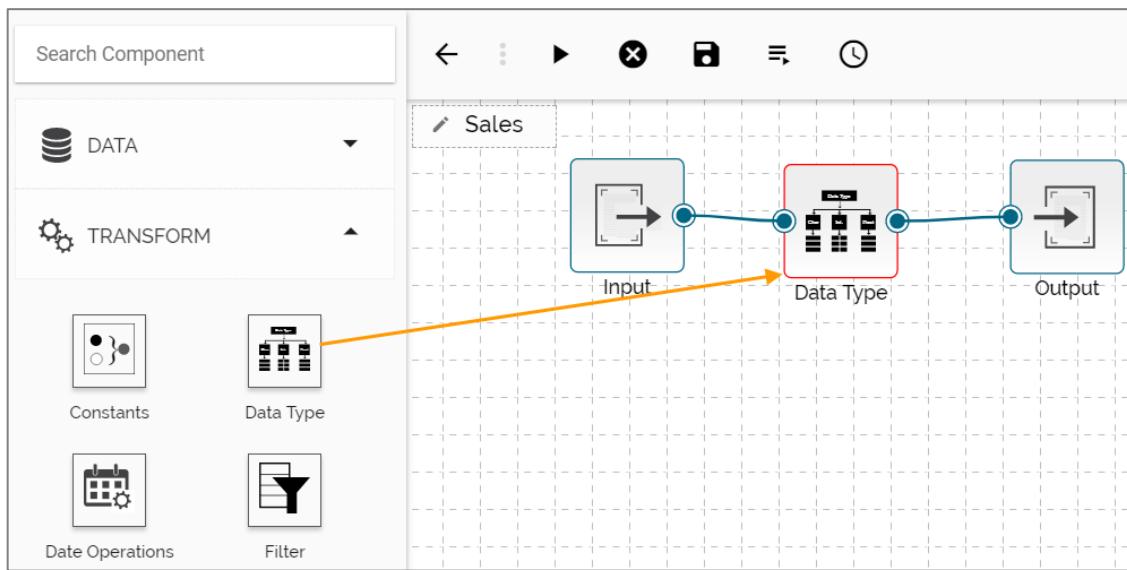

- vi) The set constant value will be applied to the selected column in the output dataset.

LocationId	ProductId	Quantity	Date
25	13	7536	2017-09-28
30	17	6786	2017-09-28
58	5	9315	2017-09-28
26	2	2157	2017-09-28
40	10	6000	2017-09-28

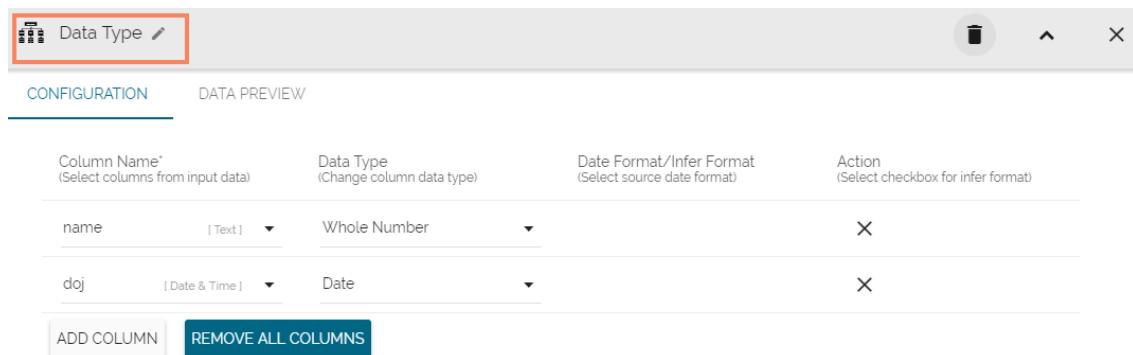

5.2. Data Type

Users can change the data type of the selected columns by using the 'Data Type.'

- i) Navigate to the Workflow editor.
- ii) Connect the 'Data Type' component to the configured input dataset and output component.

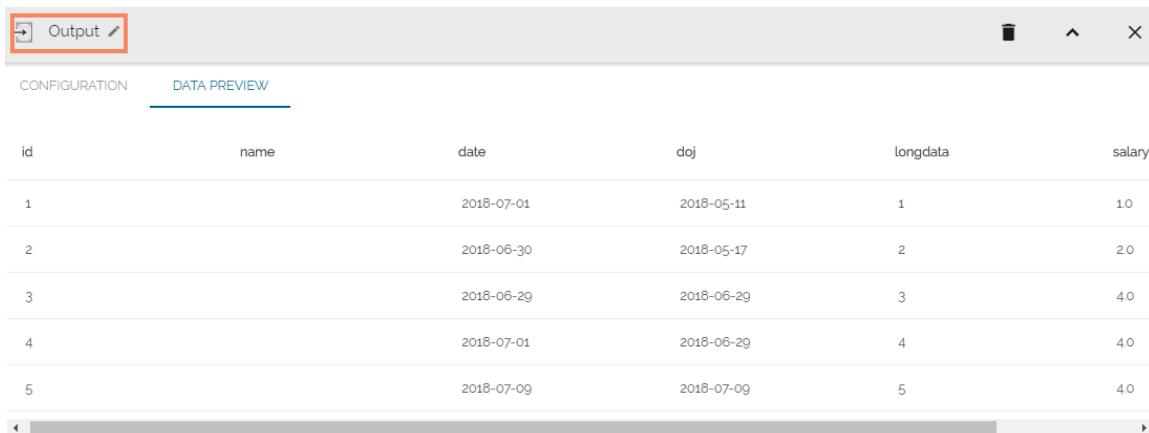

- iii) Select the columns and change the column data type using the drop-down menu.
- Column Name: Select columns from input data
 - Data Type: Change column data type
 - Date Format: Select source date format
- E.g. In this case, the column data type has been changed from ‘Date & Time’ to ‘Date.’

Column Name*	Column Type	Action
name	[Text]	X
doj	[Date & Time]	X

- iv) Save the workflow.
 v) Run/Execute the workflow.
 vi) Click the ‘DATA PREVIEW’ tab for the Output component to see the transform result

id	name	date	doj	longdata	salary
1		2018-07-01	2018-05-11	1	10
2		2018-06-30	2018-05-17	2	20
3		2018-06-29	2018-06-29	3	40
4		2018-07-01	2018-06-29	4	40
5		2018-07-09	2018-07-09	5	40

- vii) Users can compare the data previews of the Input and Data Type modules (E.g., the selected input, in this case, contains the following column types)

Input

DATA PREVIEW

id	name	date	doj	longdata	salary
1	anju	2018-07-01	2018-05-11T11:58:17.000+0000	1	10
2	raafaa	2018-06-30	2018-05-17T12:31:40.000+0000	2	20
3	rh	2018-06-29	2018-06-29T15:28:24.000+0000	3	40
4	ba	2018-07-01	2018-06-29T15:36:05.000+0000	4	40
5	aasas	2018-07-09	2018-07-09T15:38:22.000+0000	5	40

Note:

- a. Users can get the same Data Preview as Output dataset while opening the ‘DATA PREVIEW’ tab from any selected transform component. E.g., The ‘DATA PREVIEW’ tab for the ‘DATA TYPE’ Transform component is as displayed below.

Data Type

DATA PREVIEW

id	name	date	doj	longdata	salan
1		2018-07-01	2018-05-11	1	10
2		2018-06-30	2018-05-17	2	20
3		2018-06-29	2018-06-29	3	40
4		2018-07-01	2018-06-29	4	40
5		2018-07-09	2018-07-09	5	40

5.2.1. Inferring Date & Date Time Formats

The Infer Date/Data Time functionality is provided for users to include various Date/Date Time formats which are not provided by the application.

- i) Users need to create a workflow using the ‘Data Type’ transform and select a ‘Text’ type column from the ‘Column Name.’
- ii) Select ‘Date’ as Data Type
- iii) Enable the inferring using the ‘Action’ option

Data Type

CONFIGURATION DATA PREVIEW

Column Name* (Select columns from input data)	Data Type (Change column data type)	Date Format/Infer Format (Select source date format)	Action (Select checkbox for infer format)
cat	[Text]	Date	Infer Text Format <input checked="" type="checkbox"/> <input type="button" value="X"/>
ADD COLUMN		REMOVE ALL COLUMNS	

- iv) Select the ‘Date Format/Infer Format’ from the given choices

Data Type

CONFIGURATION DATA PREVIEW

Column Name* (Select columns from input data)	Data Type (Change column data type)	Date Format/Infer Format (Select source date format)	Action (Select checkbox for infer format)
cat	[Text]	Date	<div style="border: 1px solid #ccc; padding: 5px;"> day first <input type="button" value="X"/> month first year first </div> <input checked="" type="checkbox"/>
ADD COLUMN		REMOVE ALL COLUMNS	

- v) All the dates as per the selected infer date format from the source dataset will be listed in the output

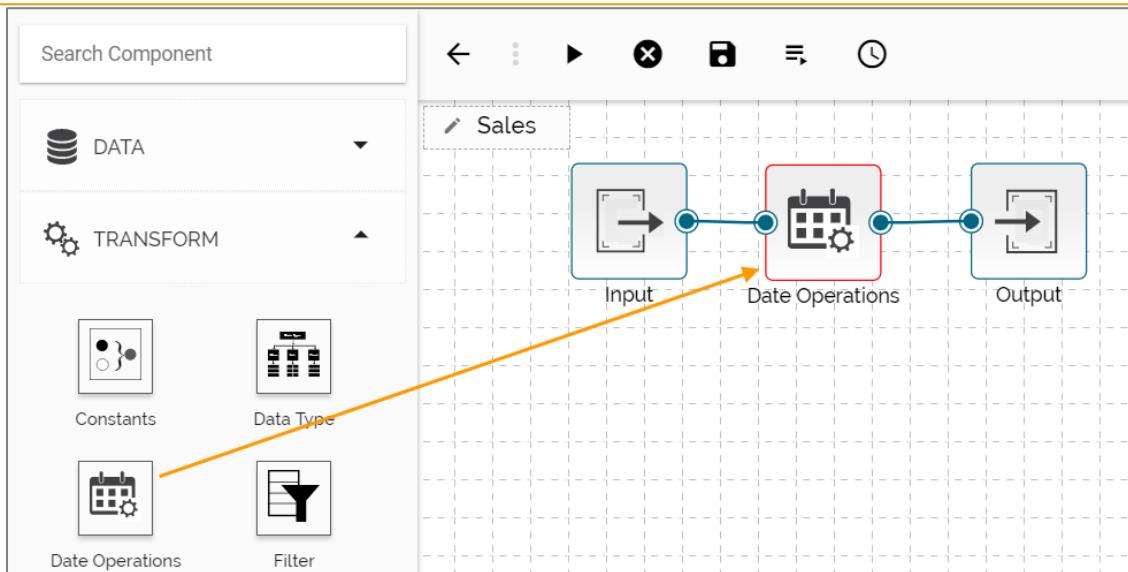

Note:

- a. The functionality only works for the ‘Text’ type of column.
- b. If the source data format does not befit in the selected infer format, then those entries will not be listed in the output.

5.3. Date Operations

Users can perform various operations of dates addition/subtraction with integers or other dates. It also allows extraction of parts of dates like day-part, month part, etc.

- i) Navigate to the Workflow editor.
- ii) Connect the ‘Date Operations’ component to the configured input dataset and output component.

- iii) Configure the 'Date Operations' component as described below:
 - a. Column Name: Enter the New Column Name
 - b. Operations: Select one operation using the drop-down menu.
 - c. Column/Value: Select a column or value for operations.
 - i. By selecting 'column' option, the column drop-down menu will be displayed.
 - ii. By selecting the 'value' option, users will be redirected to enter a value.

- iv) Save the workflow.
- v) Run/Execute the workflow.
- vi) The new column, 'Next Date' will be added in the output dataset. Users can view it in the output data preview.

The screenshot shows the 'Date Operations' configuration dialog. It has tabs for 'CONFIGURATION' and 'DATA PREVIEW'. Under 'CONFIGURATION', there are fields for 'Column Name*' (New column name), 'Operation*' (Select date operation), and 'Column / Value*' (Select column/value for operation). The 'Column Name*' field contains 'Next Date', the 'Operation*' field contains 'Add months to d...', and the 'Column / Value*' field contains 'SalesId [Whole Number]'. At the bottom left, there is a red-bordered button labeled 'ADD NEW COLUMN'.

Output

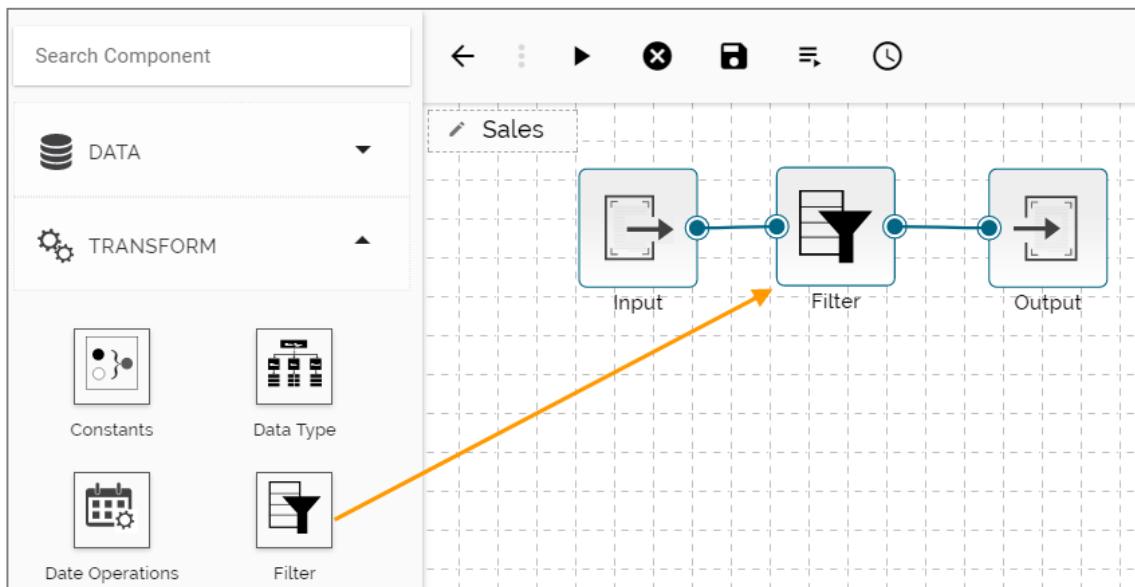

CONFIGURATION DATA PREVIEW

LocationId	ProductId	Quantity	Date	Next Date
25	13	7536	2017-09-14T17:47:04.000+0530	2015-11-14
30	17	6786	2017-09-14T17:47:04.000+0530	2015-12-14
58	5	9315	2017-09-14T17:47:04.000+0530	2016-01-14
26	2	2157	2017-09-14T17:47:04.000+0530	2016-02-14
40	10	6000	2017-09-14T17:54:04.000+0530	2016-03-14
40	9	6000	2017-09-14T17:47:04.000+0530	2016-04-14

5.4. Filter

Users can filter the input dataset by specifying conditional expressions using the '**Filter**' transform. Multiple filter conditions can be imposed in the same transform. The following table lists the map of data types and permissible filter conditions.

- i) Navigate to the Workflow editor.
- ii) Connect the '**Filter**' component to the configured input dataset and output component.

- iii) Configure the '**Filter**' Component as described below:
 - a. Select a filter rule from the drop-down
 - i. ALL: By selecting this option filter will be applied only if all the added conditions are true
 - ii. ANY: By selecting this option filter will be applied even if any one condition is true
 - b. Column Name: Choose a column from the drop-down menu
 - c. Operation: Select an operation from the drop-down menu
 - d. Type: Select one option out of '**Column**' or '**Value**'.
 - e. Compare: Enter a value>Select a column from the list to compare with

Filter

CONFIGURATION **DATA PREVIEW**

Filter rules

Include rows that meet **ANY** of the following rules

Column Name* (Choose column)	Operation* (Select operation)	Type* (Select column/value type)	Compare* (Enter/Select value to compare)
id [Whole Number]	Equals	Value	1
id [Whole Number]	Equals	Value	10

ADD NEW COLUMN

- iv) Save the workflow
- v) Run the workflow
- vi) The input data will be filtered as per the applied conditions

Filter

5.5. Formula Fields

Users can perform most common arithmetic operations (add, subtract, multiply and divide) on constants and columns.

- i) Navigate to the Workflow editor.
- ii) Connect the ‘Formula Fields’ to the configured input dataset and output component.

- iii) Configure the 'Formula' component as described below:
 - a. Column Name: Enter a name for the formula column
 - b. Calculation Type: Select a calculation type using the drop-down menu
 - c. Select Columns for Calculation: Select columns to be used in the calculation. Users can choose either a column or enter a value to complete the calculation process.
E.g. In this case, the value option is chosen.

The screenshot shows the configuration dialog for a 'Formula Fields' component. The 'CONFIGURATION' tab is active. The 'Column Name' field contains 'Formula col'. The 'Calculation Type' dropdown is set to 'Addition'. In the 'Select Columns for Calculation' section, 'SalesId' and 'Value' are selected. At the bottom, there is a 'DATA PREVIEW' section and a 'ADD NEW COLUMN' button.

- iv) Save the workflow.
- v) Run the workflow.
- vi) The calculated column will be added in the output dataset.

Output

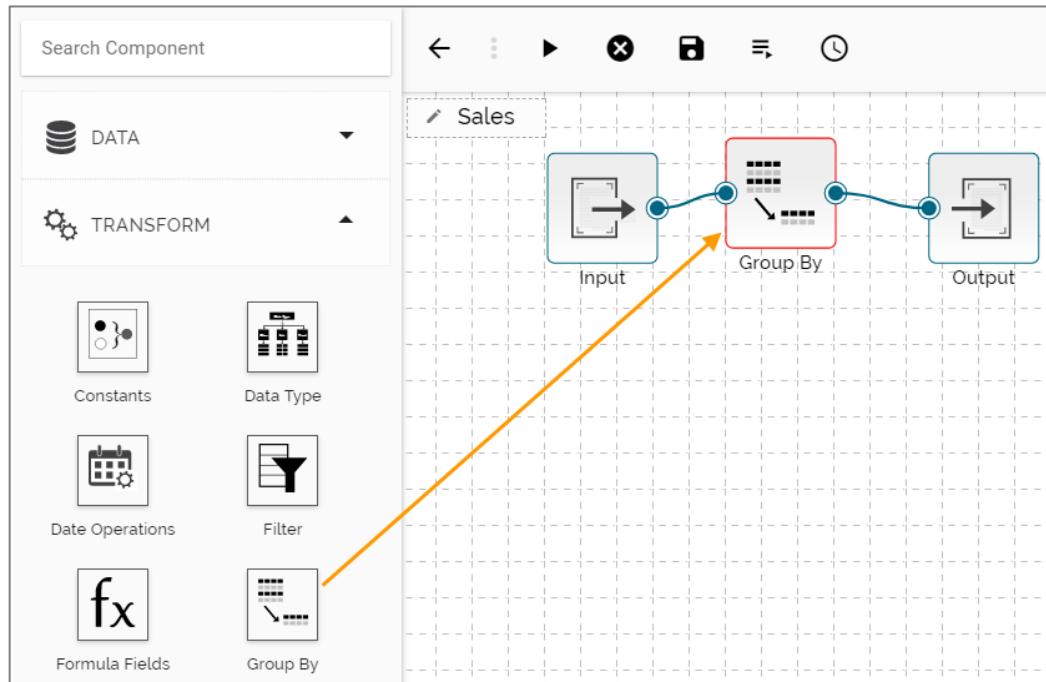

DATA PREVIEW

5.6. Group By

The ‘Group By’ feature allows multiple aggregations on the same or different columns. Users can obtain numerous aggregations in the same transform. The aggregated values are added to a new column.

- i) Navigate to the Workflow editor.
- ii) Connect the ‘Group By’ component to the configured input dataset and output component.

- iii) Configure the ‘Group By’ component as described below:
 - a. Column Name: Select a column from the drop-down menu
 - b. New Column: Enter a title for the aggregate column
 - c. Column Aggregate: Select a column from the drop-down menu to apply aggregation
 - d. Aggregate Type: Select an aggregation operation from the drop-down menu

Group By

77	21

Note: The supported data types and aggregate operations are displayed in the following table:

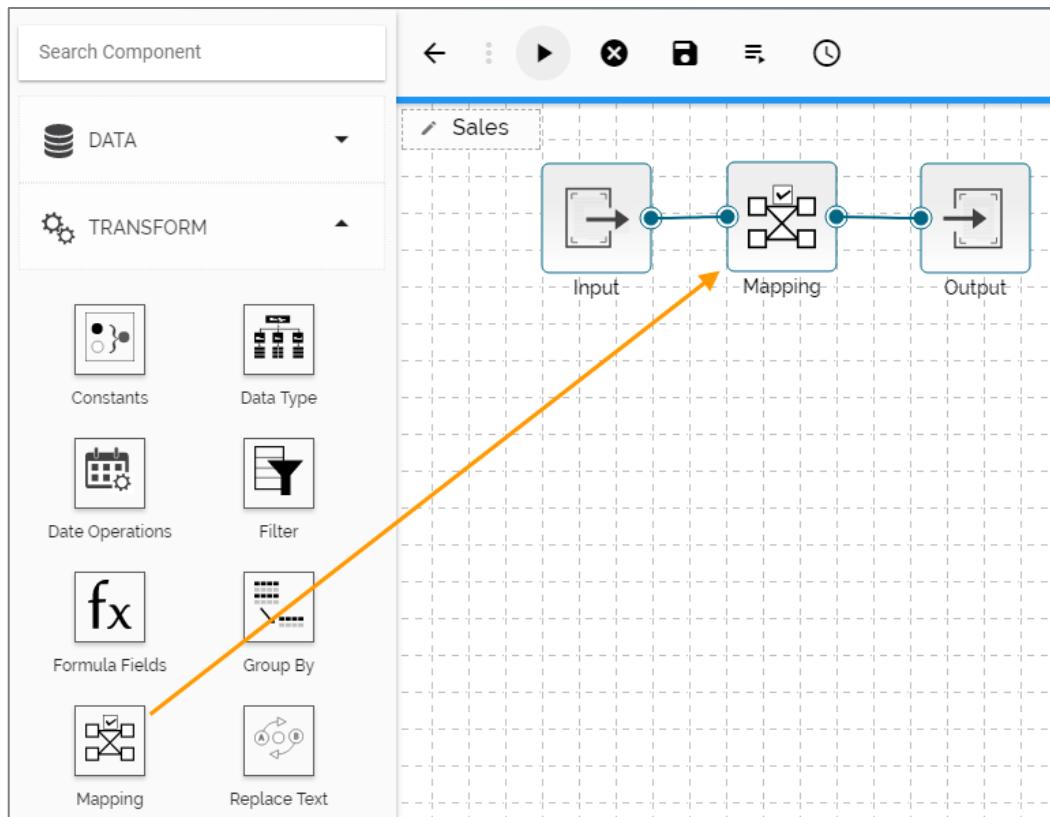

Data Type	Aggregate
Text	Count Count Including NULLS Count Distinct Values First Non-Null Value Last Non-Null Value First Value Last Value Combine Strings Separated by Comma
Date Date Time	Minimum Maximum Count Count Including Nulls Count Distinct Values First Non-Null Value Last Non-Null Value First Value

	Last Value
Whole Number	Sum
Decimal	Average
Decimal (Fixed)	Minimum Maximum Standard Deviation Count Count Including NULLs

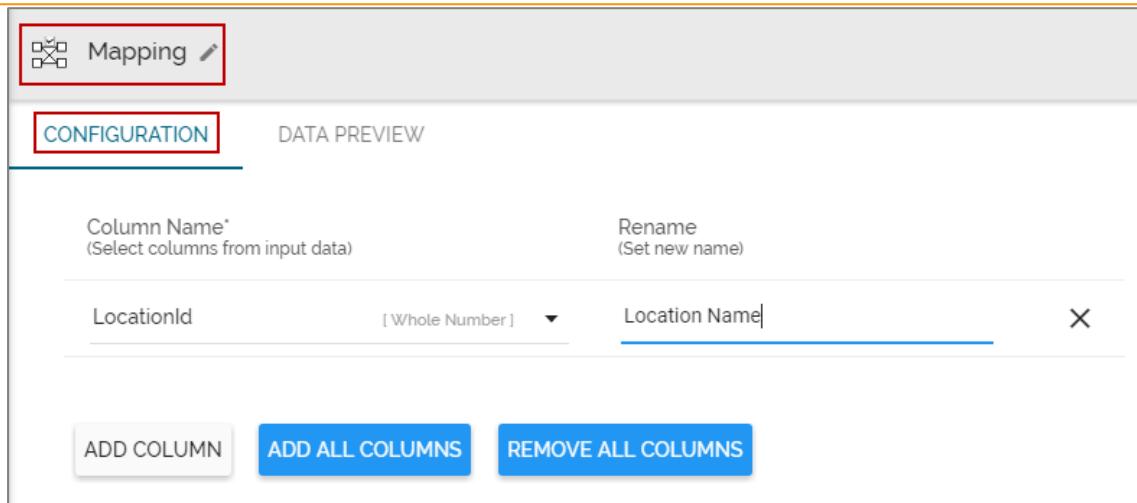

5.7. Mapping

Users should be able to select, remove or rename columns in the input dataset to fit the structure of the sink.

- i) Navigate to the Workflow editor
- ii) Connect the ‘Mapping’ component to the configured input dataset and output component

- iii) Configure the ‘Mapping’ component:
 - a. Column Name: Select a Column from the input data using the drop-down menu
 - b. Rename: Rename the selected column of the input data
 - c. ADD Column: Click this option to add one more column from the input dataset
 - d. ADD ALL COLUMNS: Click this option to map all the columns from the input dataset
 - e. REMOVE ALL COLUMNS: Click this option to remove all the added columns for mapping

5.8. Replace Text

Users can search by whole word, sensitive to case, search for special values like NULL or empty strings, or use regular expressions, and then replace with any given constant values or even empty strings. Only text columns can be transformed using this component. Users can replace text for the multiple text columns.

- i) Navigate to the Workflow editor.
 ii) Connect the 'Replace Text' component with the configured Input dataset and Output component.

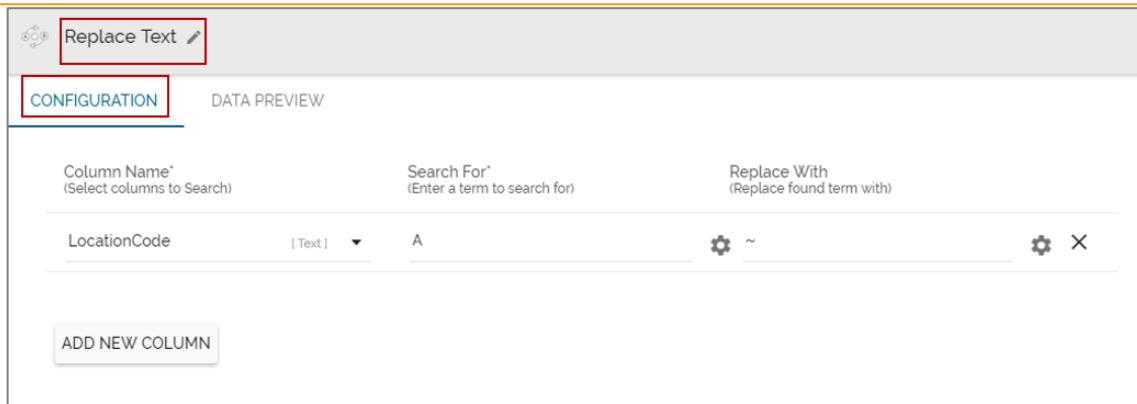

- iii) Run the workflow to preview the input data.

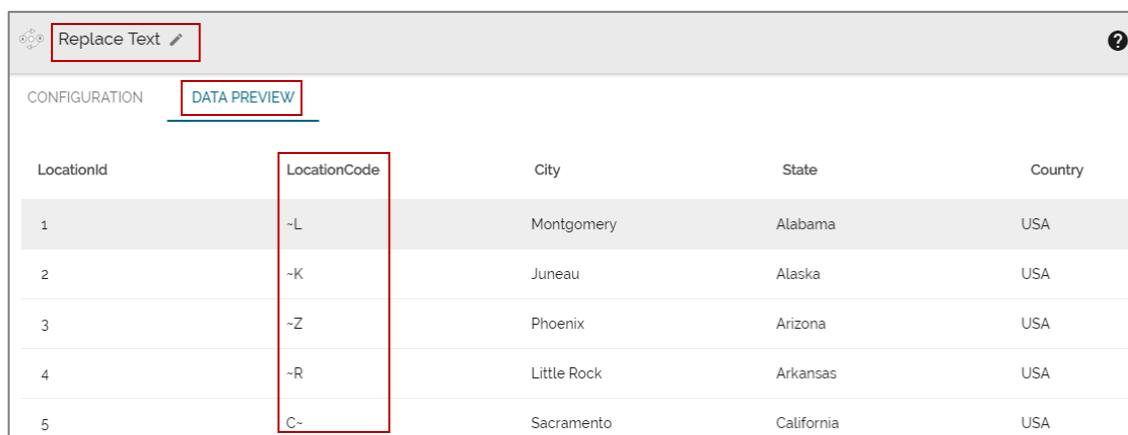

LocationId	LocationCode	City	State	Country
1	AL	Montgomery	Alabama	USA
2	AK	Juneau	Alaska	USA
3	AZ	Phoenix	Arizona	USA
4	AR	Little Rock	Arkansas	USA

- iv) Configure the 'Replace Text' component as described below:
- Column Name: Select a column from the input data set.
 - Search for: Enter a term from the selected column to search for.
 - Replace with: Enter a term to replace the searched term in the input data.

The screenshot shows the 'Replace Text' component configuration. The 'CONFIGURATION' tab is active. In the 'Column Name*' section, 'LocationCode' is selected. In the 'Search For' section, the term 'A' is entered. In the 'Replace With' section, '(Replace found term with)' is displayed. At the bottom left is an 'ADD NEW COLUMN' button.

- v) Run the workflow.
- vi) Save the workflow.
- vii) Open the Output data preview to see the replacement of the selected text in the column.

LocationId	LocationCode	City	State	Country
1	~L	Montgomery	Alabama	USA
2	~K	Juneau	Alaska	USA
3	~Z	Phoenix	Arizona	USA
4	~R	Little Rock	Arkansas	USA
5	C~	Sacramento	California	USA

Note:

- Users can click on the 'ADD NEW COLUMN' option to configure the multiple columns for any transform component.
- Users can also see data preview of the various transform components.

6. Merge

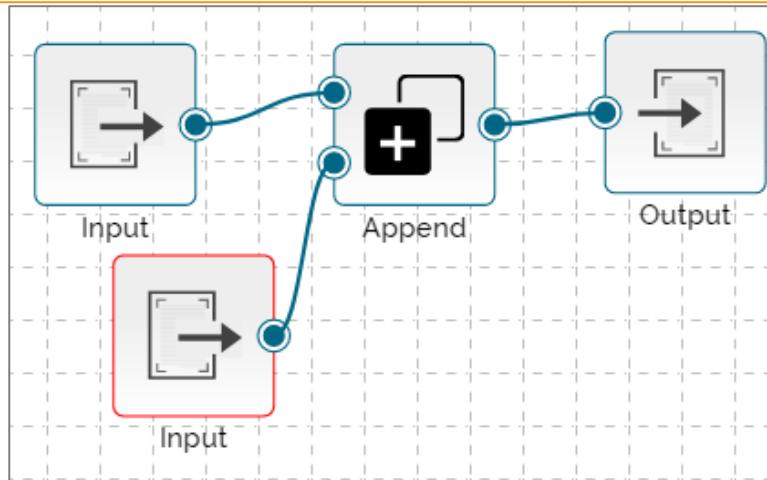

Users can use the '**Merge**' components to combine input data sets and get the required output.

6.1. Append

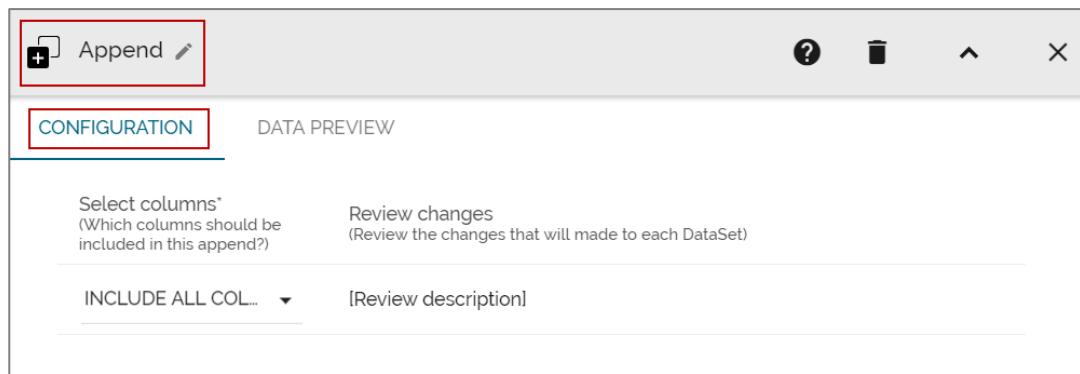

The '**Append**' feature combines one dataset on top of another. If the datasets are of different structures, still the union is possible, and the output will be a unified more massive structure with NULL values populated wherever data is missing. Users can choose whether to include only shared columns or all columns to append.

6.1.1. Append All Columns

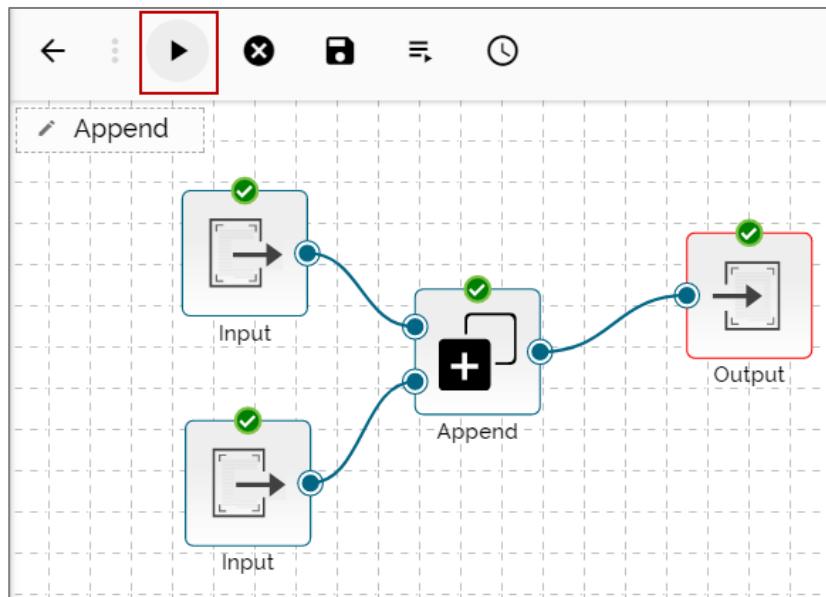

- Navigate to the Workflow editor.
- Configure two input datasets.
- Connect the '**Append**' component with the configured Input datasets and an Output component.

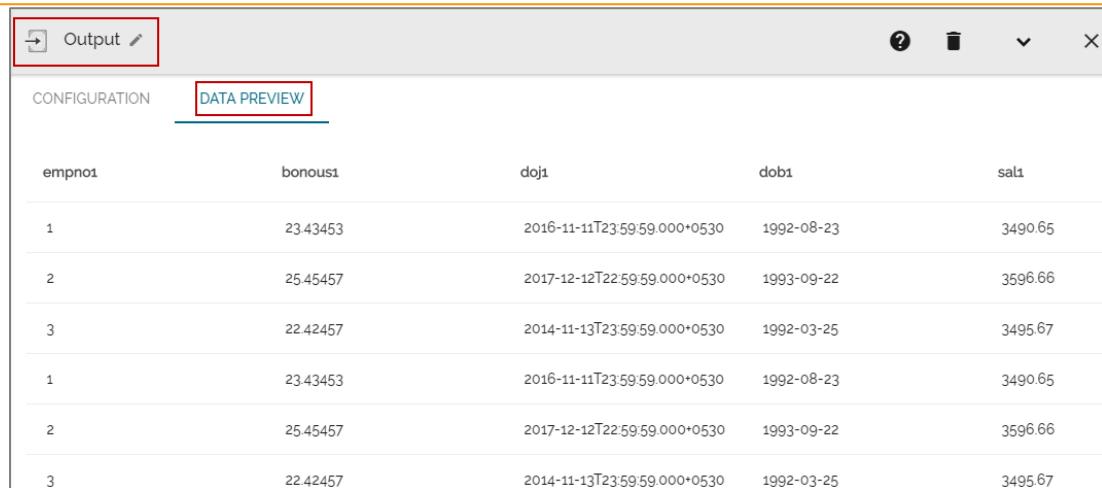

- iv) Select 'Include All Columns' option using the 'Select Columns' drop-down menu.

- v) Save the workflow.
vi) Run the workflow.

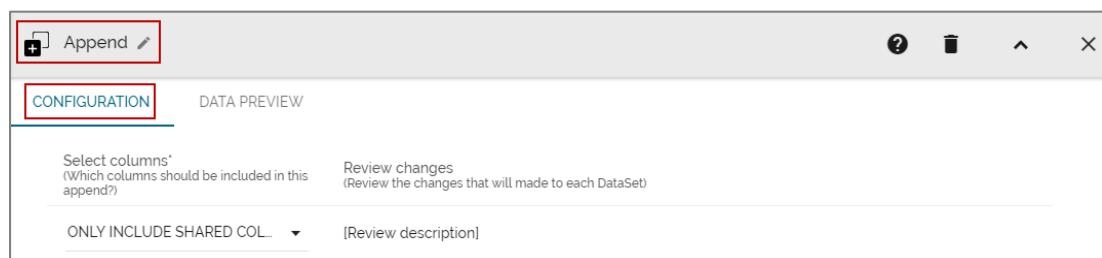

- vii) The entire data of both the input data sets will be appended in the output data preview.

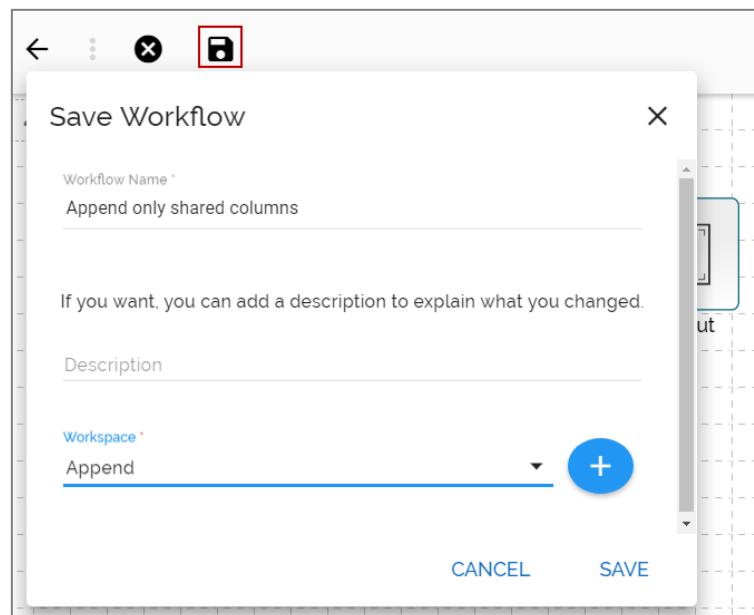

empno1	bonus1	doj1	dob1	sal1
1	23.43453	2016-11-11T23:59:59.000+0530	1992-08-23	3490.65

3	22.42457	2014-11-13T23:59:59.000+0530	1992-03-25	3495.67

Append Only Shared Columns

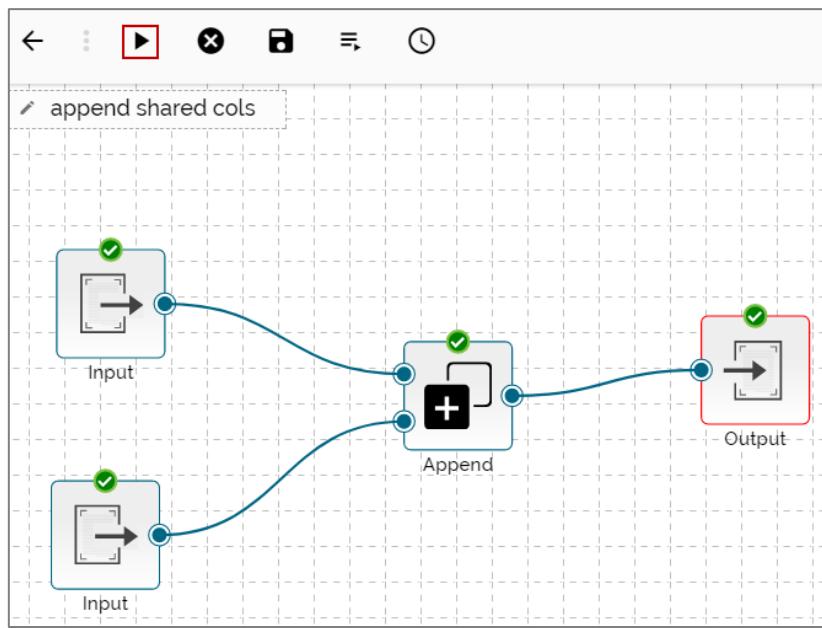

- i) Connect the 'Append' component to the configures input datasets and an output component.
- ii) Choose 'ONLY INCLUDE SHARED COLUMNS' as an option to append the datasets.
- iii) The entire data of both the input data sets will be appended in the output data preview.

- iv) Save the Workflow.

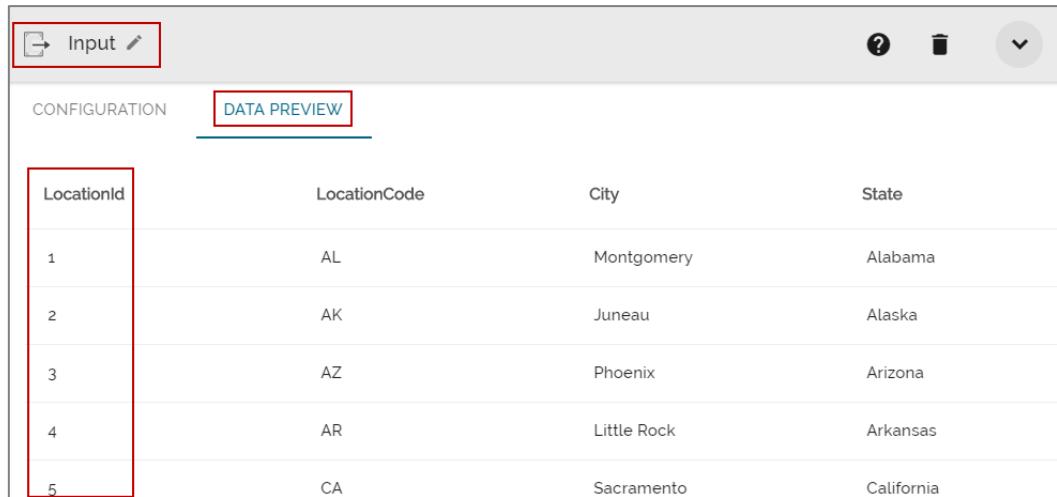

v) Run the Workflow.

vi) The shared column(s) will be appended in the output data set.

E.g. The following images illustrate that the shared column '**Location**' has been displayed under the data preview of Append and Output components.

a. Input Dataset-1

LocationId	LocationCode	City	State
1	AL	Montgomery	Alabama
2	AK	Juneau	Alaska
3	AZ	Phoenix	Arizona
4	AR	Little Rock	Arkansas
5	CA	Sacramento	California

1535983	40	9	6000	2017-09-14T17:47:04.000+0530

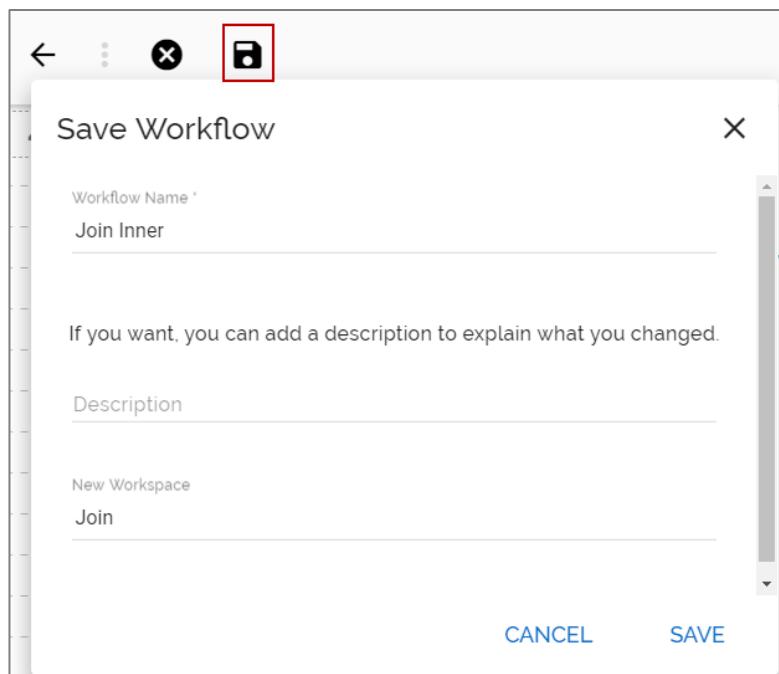

- Connect the ‘Join’ component with the above-given input datasets and one output component to complete the workflow.
- Configure the ‘Join’ component as described below:
 - Identify Column: Identify a column from the input dataset 1
 - Join Type: Choose a join type to merge the selected datasets out of the given choices
 - Inner
 - Left Outer
 - Right Outer
 - Full Outer
 - Matching Column: Select a column from the input dataset 2

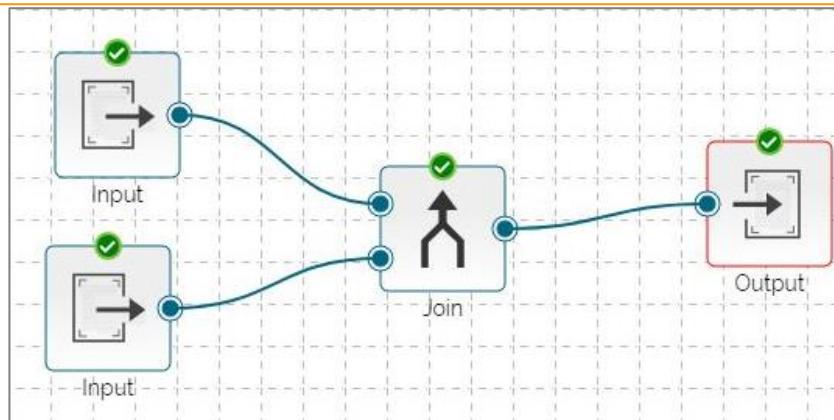

Note:

- a. By default, the 'Inner' join type will be selected. Users can apply multiple inner joins by using the 'ADD COLUMN' tab.
- b. Click 'SWAP SOURCE' to interchange the input datasets and the selected columns from the data sets.

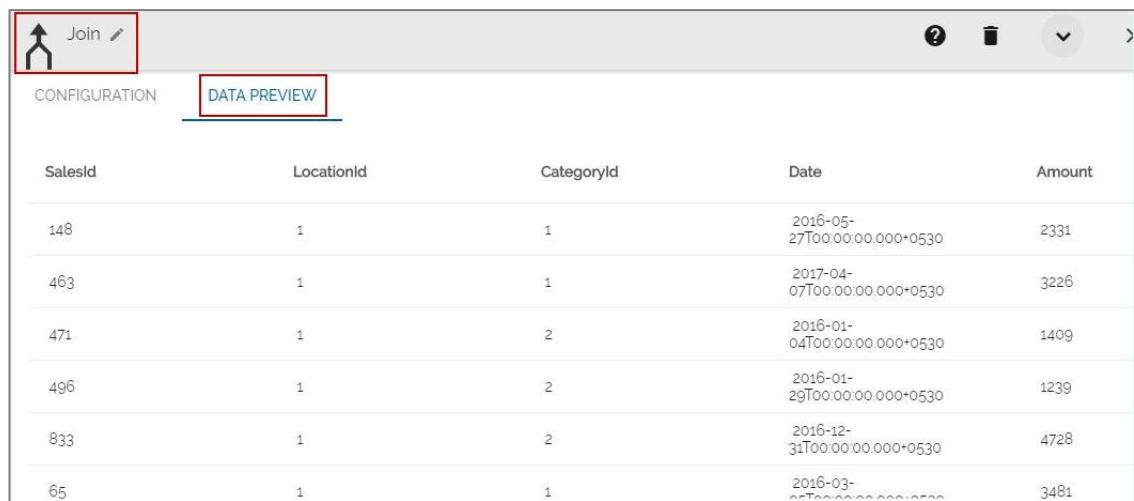

iv) Save the workflow.

v) Run the workflow.

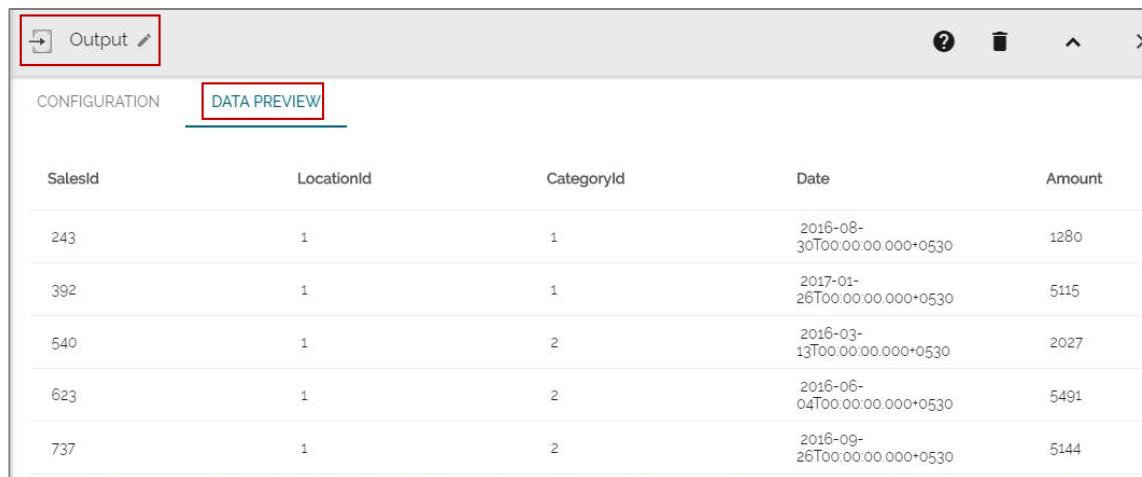

- vi) Click the 'Data Preview' tab from the Join component to view data preview of the merged data.

The screenshot shows the configuration interface for a 'Join' component. At the top, there is a 'Join' icon with a pencil symbol. Below it, there are two tabs: 'CONFIGURATION' and 'DATA PREVIEW'. The 'DATA PREVIEW' tab is highlighted with a red border. The main area displays a table of merged data:

SalesId	LocationId	CategoryId	Date	Amount
148	1	1	2016-05-27T00:00:00.000+0530	2331
463	1	1	2017-04-07T00:00:00.000+0530	3226
471	1	2	2016-01-04T00:00:00.000+0530	1409

737	1	2	2016-09-26T00:00:00.000+0530	5144

6.2.1. Join Types:

The 'Join' feature offers four types of join to merge datasets.

The sample data sets used to describe the supported join types are:

1. Input Dataset 1

Input 1

CONFIGURATION DATA PREVIEW

empno	name	age
1	David	23
2	Louie	24
3	Jake	23
4	Harvey	27
5	Matthew	40

2. Input Dataset 2

Input 2

CONFIGURATION DATA PREVIEW

SalesId	LocationId	ProductId
1535978	25	13
1535979	30	17
1535980	58	5
1535981	26	2
1535982	40	10
1535983	40	9

a) Inner Join

- Connect the join component to the configured input datasets and output component to create a workflow.
- Specify a join type from the 'Configuration' tab of the join component.

Inner Join

CONFIGURATION DATA PREVIEW

Identifying Column*	Join Type*	Matching Column*
Mapping	Inner	Mapping
empno [Whole Number]		LocationId[Whole Number]
ADD COLUMN		SWAP SOURCE

- Save and run the workflow.
- Click the 'Data Preview' tab using the join component to view the merged datasets.

Inner Join

CONFIGURATION **DATA PREVIEW**

empno	name	age	SalesId	LocationId	ProductId

7.1. Schedule Configuration Options

These options are provided to configure a range of time for a scheduled workflow. The user can select only one option at a time from the given menu.

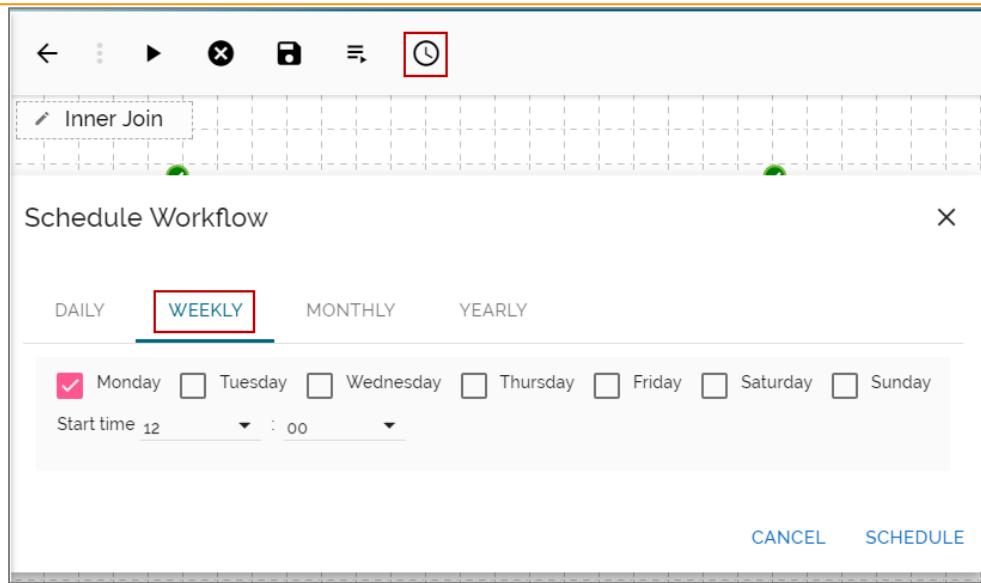

1. Daily: User can schedule the job daily by using this option.

- a. Click the 'Scheduler' icon on the workflow editor.
- b. Choose the 'DAILY' option from the 'Schedule Workflow' window (It is a default option).
 - i. Select an option out of the given choices.
 1. Every __ day(s)
 2. Every Weekday
 3. Set the start time using the drop-down.
- c. Click the 'SCHEDULE' option.

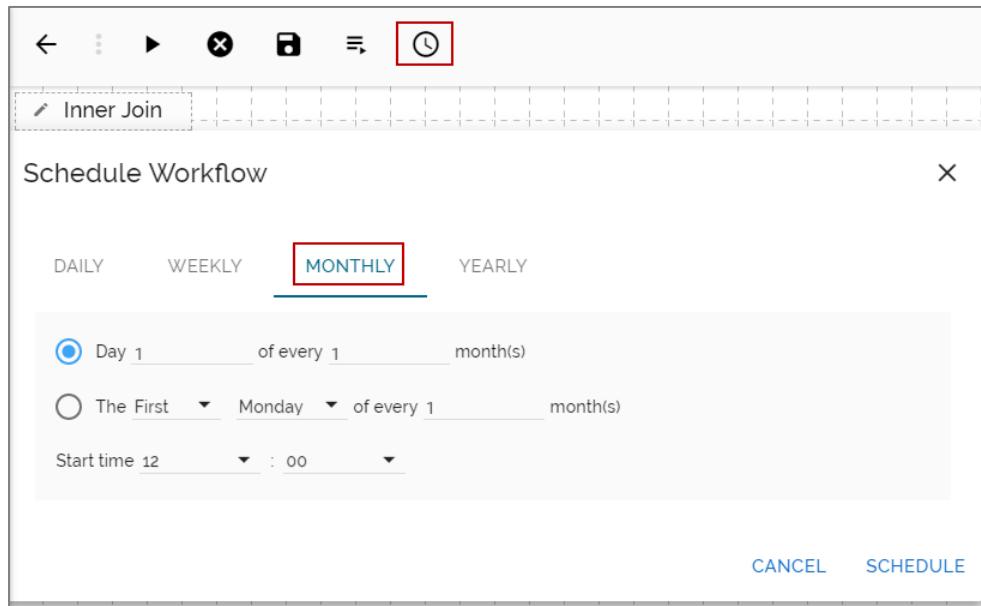

2. Weekly: User can schedule the job weekly by using this option.

- a. Click the 'Scheduler' icon on the workflow editor.
- b. Choose the 'WEEKLY' option from the 'Schedule Workflow' window.
 - i. Select an option out of the given choices.
 1. Choose the days of the week by check marking in the box.
 2. Set the start time using the drop-down.
- c. Click the 'SCHEDULE' option.

3. Monthly: User can schedule the job Monthly by using this option.

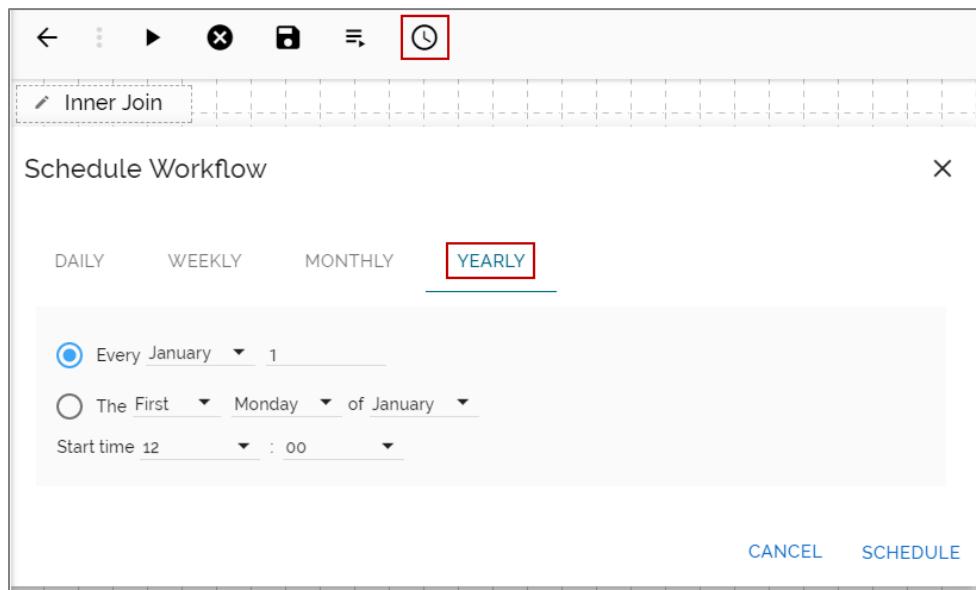

- Click the 'Scheduler' icon on the workflow editor.
- Choose the 'MONTHLY' option from the 'Schedule Workflow' window.
 - Select an option out of the given choices to choose a day for each month.
 - Set the start time using the drop-down.
- Click the 'SCHEDULE' option.

4. Yearly: User can schedule the job yearly by using this option.

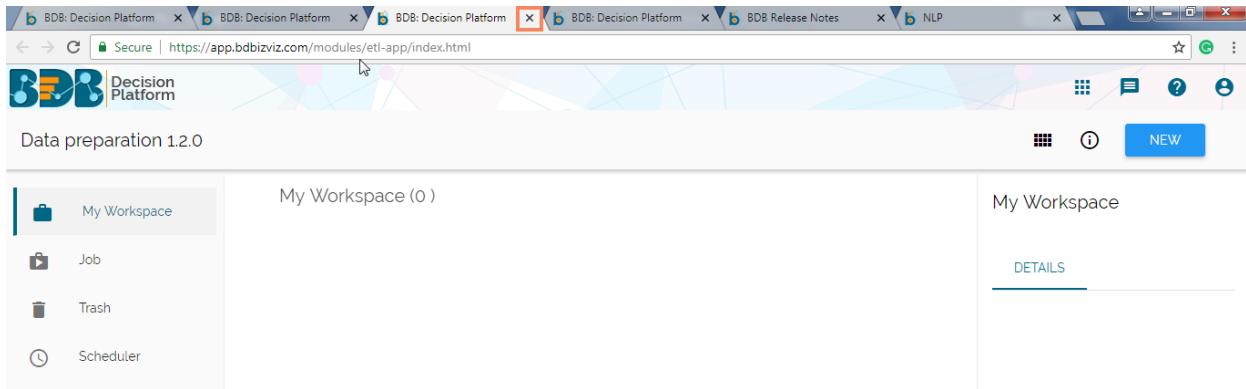

- Click the 'Scheduler' icon on the workflow editor.
- Choose the 'YEARLY' option from the 'Schedule Workflow' window.
 - Select an option out of the given choices.
 - Specify either a day or date of a specific month in a year.
 - Set the start time using the drop-down.

c. Click the ‘SCHEDULE’ option.

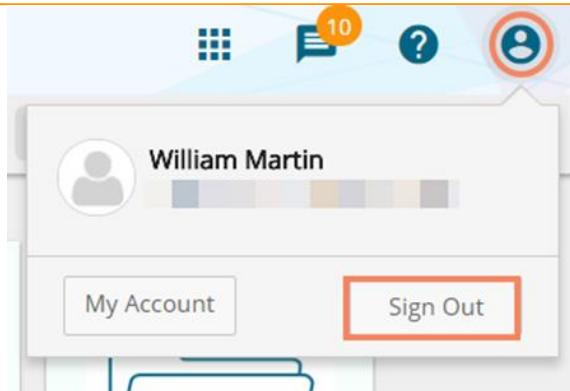

8. Signing Out

It is possible for a user to log out from the BDB Data Preparation plugin at any given stage. Users need to click on the ‘Close’  option to close the Data Preparation page.

Follow the below given steps to log out from the BDB Platform.

- i) Click the ‘User’ icon  on the Platform homepage.
- ii) A menu appears with the logged in user details (User’s name and email id).
- iii) Click ‘Sign Out.’

- iv) Users can successfully log out of the **BDB** Platform.

Note: Clicking on 'Sign Out' redirects the user back to the login page of the BDB platform.
