

How to Guide

Websocket Components(DP)

Version: Release 1.1

Contents

Component Description-.....	3
1. Websocket Listener.....	3
2. Websocket Producer.....	4

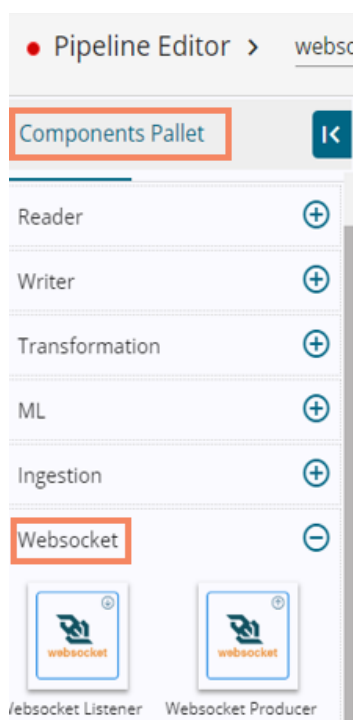

Component Description-

The Websocket Component provided in the Components Pallet of the Data pipeline contains Websocket Listener and Websocket Writer components to produce and consume the live streaming data using socket.

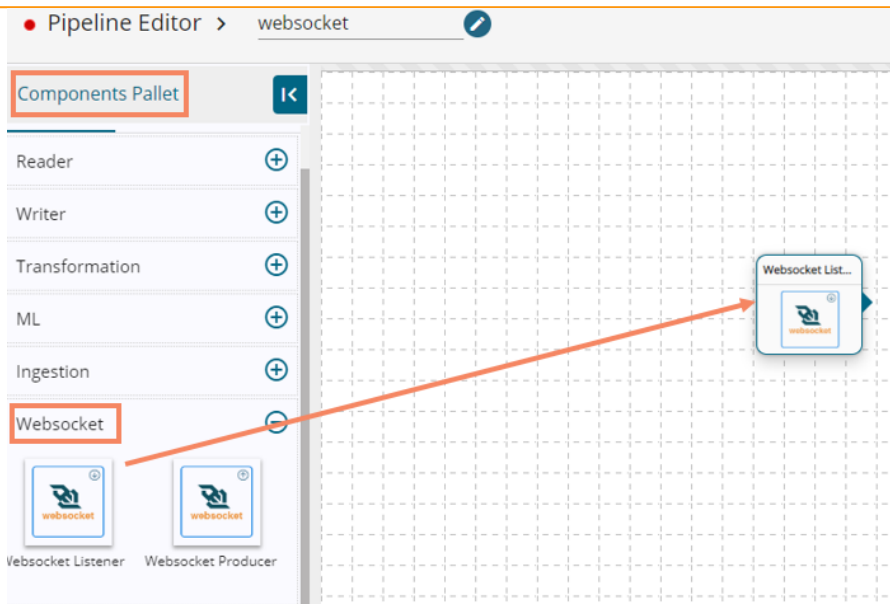

1. Websocket Listener

Websocket Listener component listens to and accepts the incoming Websocket connection requests.

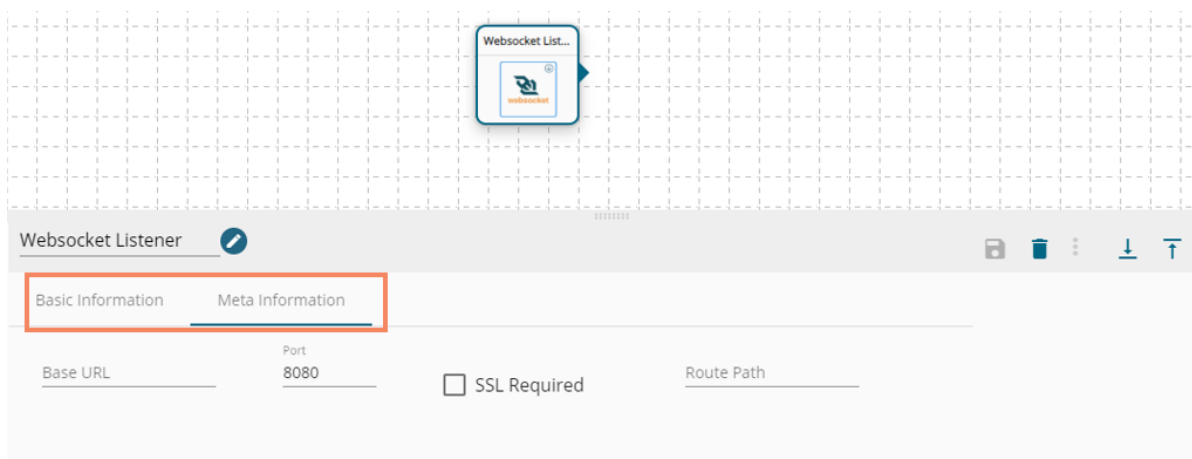

- 1) Navigate to the Pipeline Workflow Editor.
- 2) Expand the Websocket section using the Components Pallet.

- 3) Drag the Websocket Listener component to the workspace.

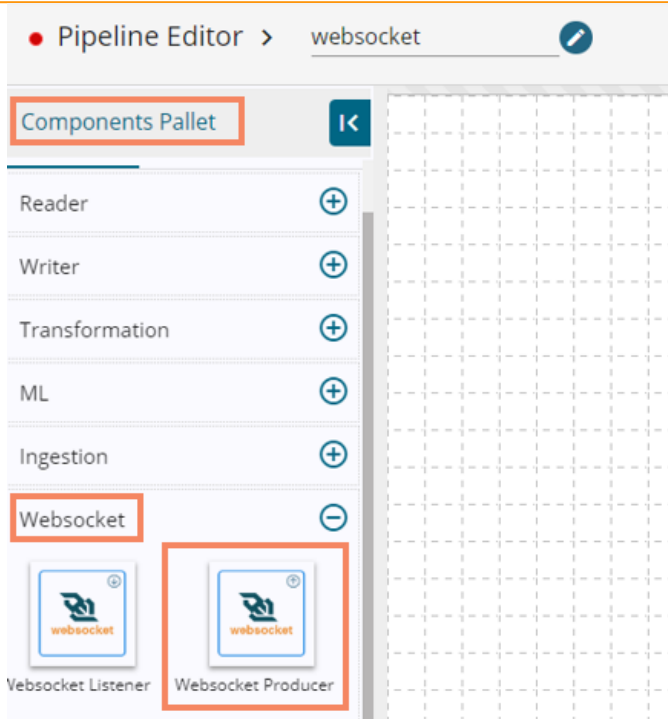

4) Configure the Websocket Listener component by configuring the required Basic and Meta information.

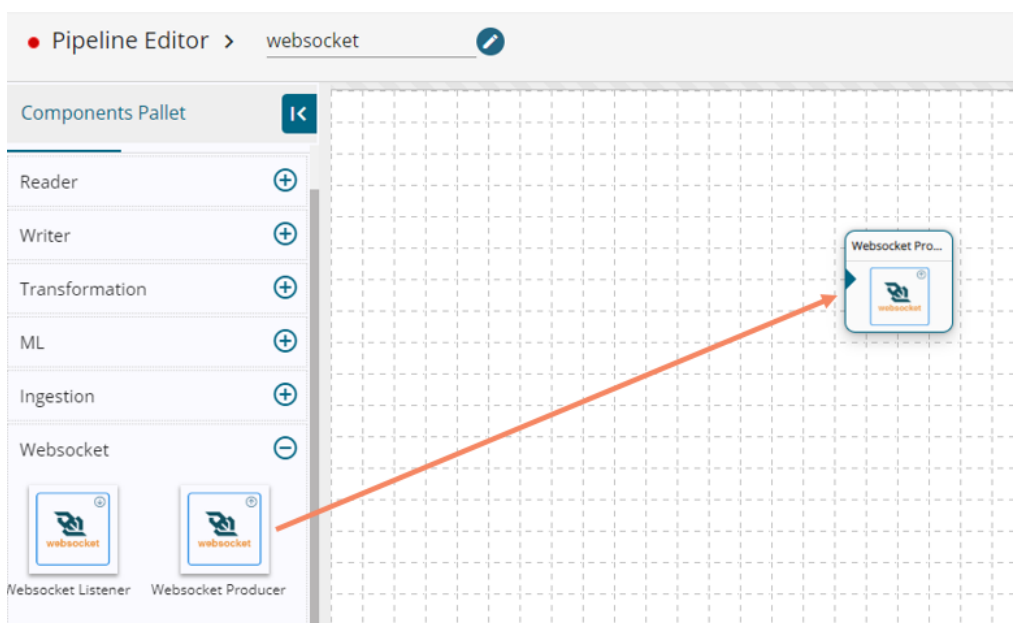

2. Websocket Producer

Websocket Producer helps users to get the message received by the Kafka channel.

- 1) Navigate to the Pipeline Workflow Editor.
- 2) Expand the Websocket section using the Components Pallet.

3) Drag the Websocket Producer component to the workspace.

4) Configure the Websocket Producer component by providing the required Basic and Meta Information.
