1. About this Guide

1.1. Document History

Product Version	Release Date	Description
BDB Data Preparation (ETL) 1.0	August 31 st , 2017	First Release of the document
BDB Data Preparation (ETL) 1.1	December 11 th , 2017	Updated document
BDB Data Preparation (ETL) 1.2	April 15 th , 2018	Updated document
BDB ETL 3.8	December 1 st , 2018	Updated document
BDB ETL 4.0	December 31 st , 2018	Updated document
BDB ETL 4.2	March 25 th , 2019	Updated document
BDB ETL 4.3	April 26 th , 2019	Updated document

Note: ETL 3.8 onwards the plugin Product Version reflects the BDB Platform release version.

1.2. Overview

This guide covers:

- Introduction and steps to use various components of the BDB ETL plugin
- Configuration details of the ETL components

1.3. Target Audience

This guide is aimed at business users of all skill levels who deal with vast amounts of data and requires data preparation to be attempted before getting informative insights from the collated business datasets.

2. Introduction

2.1. Introducing the BDB ETL

The BDB ETL is a self-service data preparation tool that empowers data-driven Business users with powerful capabilities to extract, transform, and load new data sources. The tool offers a range of components to transform and merge the selected dataset. Users can get analytics-ready data faster to generate valuable insights in less time.

2.2. Supported Web Browsers

The BDB Platform is a web browser-based application. The users can run the BDB Platform and its various plugins on the below given versions of the browsers:

Mozilla Firefox/ Firefox ESR	Latest Version
Microsoft Internet Explorer	11
Microsoft Edge	Latest Version

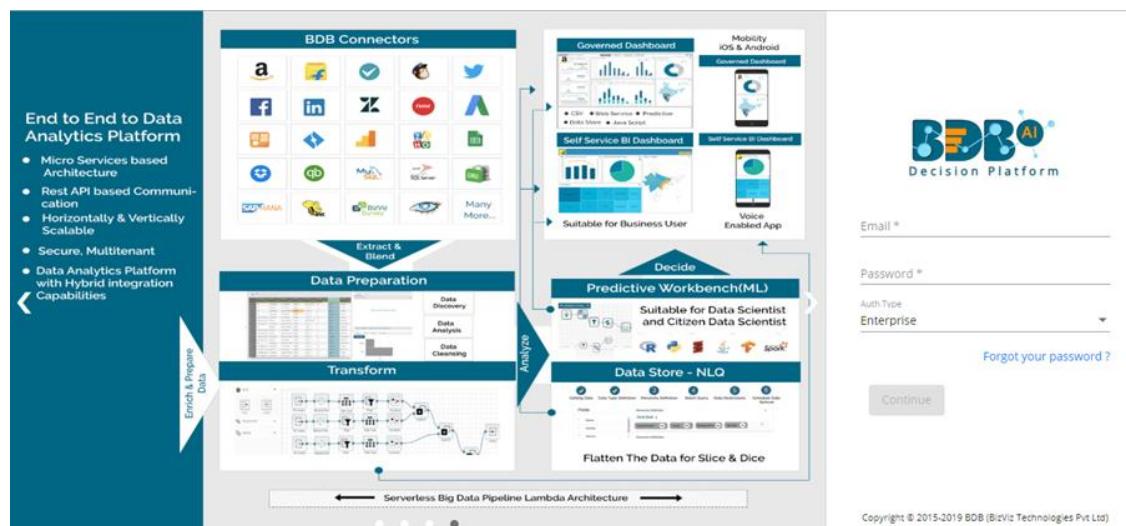

Apple Safari	10
Google Chrome	Latest Version (recommended web browser)

3. Getting Started with the BDB ETL

3.1. Accessing the ETL Plugin

This section explains how to access the BDB Platform and a variety of plugins that it offers:

- Open BDB Enterprise Platform Link: <https://app.bdb.ai>
- Enter your credentials to log in.
- Click the 'Continue' option.

- BDB Platform homepage opens.
- Users get redirected to the BDB Platform homepage.

The image shows the BDB Platform homepage again. It features a banner for 'Big Data BizViz Release 4.3'. To the right, there are four main sections: 'Platform' (described as a complete decision platform for business needs), 'Dashboard' (designed for saving and publishing dashboards), 'Sentiment' (using Natural Language Processing and machine learning for sentiment analysis), and 'Analysis' (using ANEW dictionary for affective norms). Below these are two smaller sections: 'Business Story' (self-service BI) and 'Predictive Analysis' (using statistical analysis and machine learning for business moves). At the bottom left, there's a note: 'Note: This document is for informational purposes only and does not constitute a binding contract or legal agreement between the user and BDB Technologies Pvt Ltd.' The footer copyright notice is 'Copyright © 2019 BDB (BizViz Technologies Pvt Ltd)'.

Note:

- a. The above screen opens only for those newly created users who have not yet created any document using the BDB Platform.
- b. If the user has created some documents previously, then the Platform homepage opens displaying the 'My Documents' page by default.

- vi) Click the 'Apps' icon.
- vii) All the available plugin applications get displayed.
- viii) Select the 'ETL' plugin.

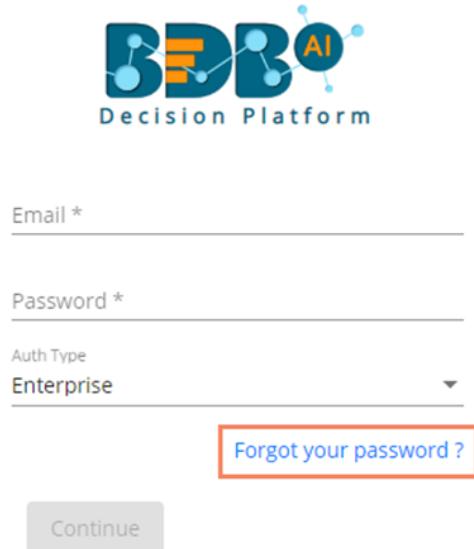

- ix) The ETL landing page opens.
- x) Four major modules get displayed on the ETL landing page:
 - a. My Workspace (Default Component)
 - b. Job
 - c. Trash
 - d. Scheduler

This document aims to describe all the significant components and the related workflows at details.

3.1.1. Forgot Password Option

Users are provided with a choice to change the password on the Login page of the platform.

- i) Navigate to the Login page.
- ii) Click '**Forgot your password?**' option.

The screenshot shows the BDB Decision Platform login interface. At the top is the BDB AI logo. Below it is a form with fields for 'Email *' and 'Password *'. A dropdown menu for 'Auth Type' is set to 'Enterprise'. At the bottom of the form is a 'Forgot your password ?' button, which is highlighted with a red rectangular border. Below the form is a 'Continue' button.

Copyright © 2015-2019 BDB (BizViz Technologies Pvt Ltd)

- iii) A new window opens.
- iv) Provide the email id that is registered with BDB to send the reset password link.
- v) Click the '**Continue**' option.

Having trouble signing in?

To reset your password, enter the email address you use to sign in to BizViz. This can be your email address associated with your account.

- vi) Users may be redirected to select a space in case of multiple spaces under one server link(They need to select a space and click the ‘Continue’ option once again). If users do not have multiple spaces then, a message appears to notify the user that about the password reset link (The users receive the reset link via their registered email.)

Password reset Link has been sent to your mail.

- vii) Click the link from your registered email.
- viii) Users get redirected to the ‘Reset Password’ page to set a new password.
- ix) Set a new password.
- x) Confirm the newly set password.
- xi) Click the ‘Continue’ option.

**Reset Password**

You've confirmed ownership of the BizViz Account, Reset your password now to regain access.

New Password *

Confirm New Password *

Continue

- xii) The password for the selected BDB account gets reset.

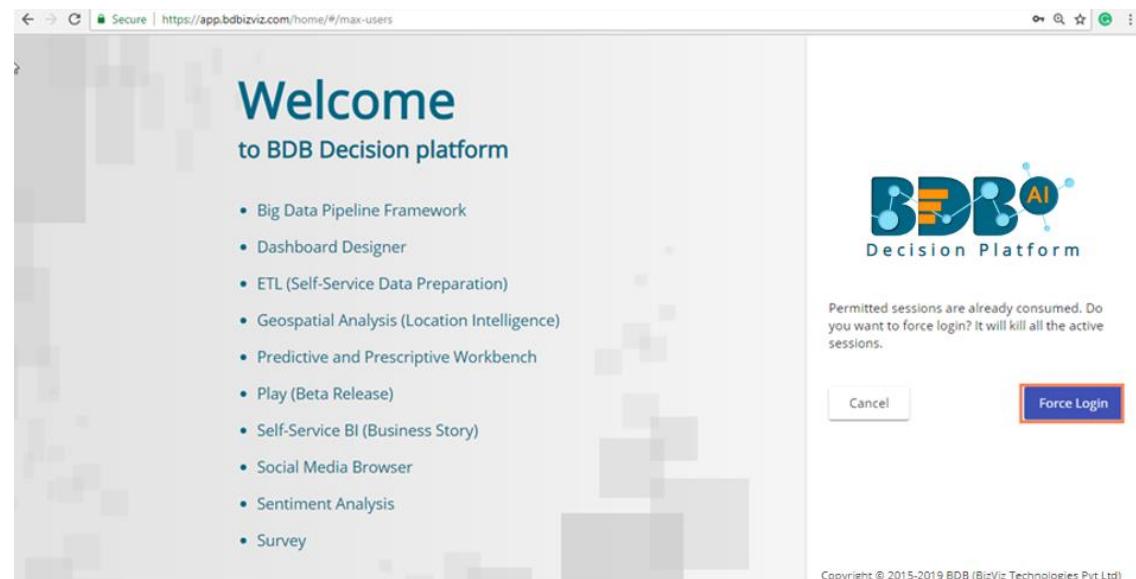

3.1.2. Force Login

The '**Force Login**' functionality has been introduced to control the number of active sessions up to three. The users can access only 3 sessions at a time when they try to access 4th session a warning message displays to inform that the user has consumed the permitted sessions and a click on the '**Force Login**' would kill all those active sessions.

- i) Navigate to the BDB Platform Login page.
- ii) Enter the valid credentials to log in.
- iii) Click the '**Continue**' option.

- iv) The user gets the following message if the user already consumes the permitted active sessions (3 sessions at a time).
- v) Click the '**Force Login**' option.

- vi) A warning message appears that the currently active sessions get killed for the user and the user has redirected to the log in a page of the BDB Platform.

Note: The user can successfully login to the BDB Platform after selecting the '**Force Login**' option to log in the platform.

4. Basic Features

The landing page of ETL launches workspace view. '**My Workspace**' gets displayed by default.

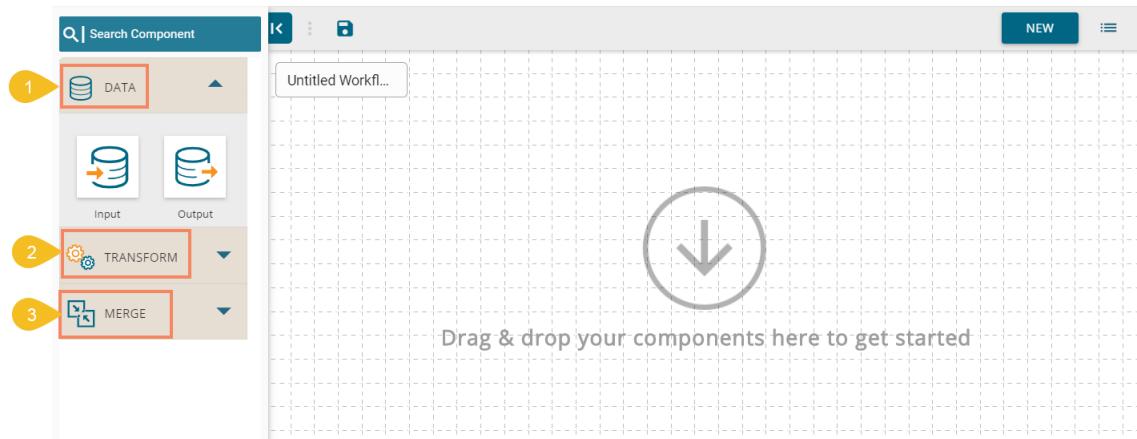

4.1. Workflow Editor

'My Workspace' is a placeholder for the workflows which are created using various ETL components. Users can create workflows using the workflow editor.

- i) Navigate to the ETL landing page.
- ii) Click the 'NEW' option.

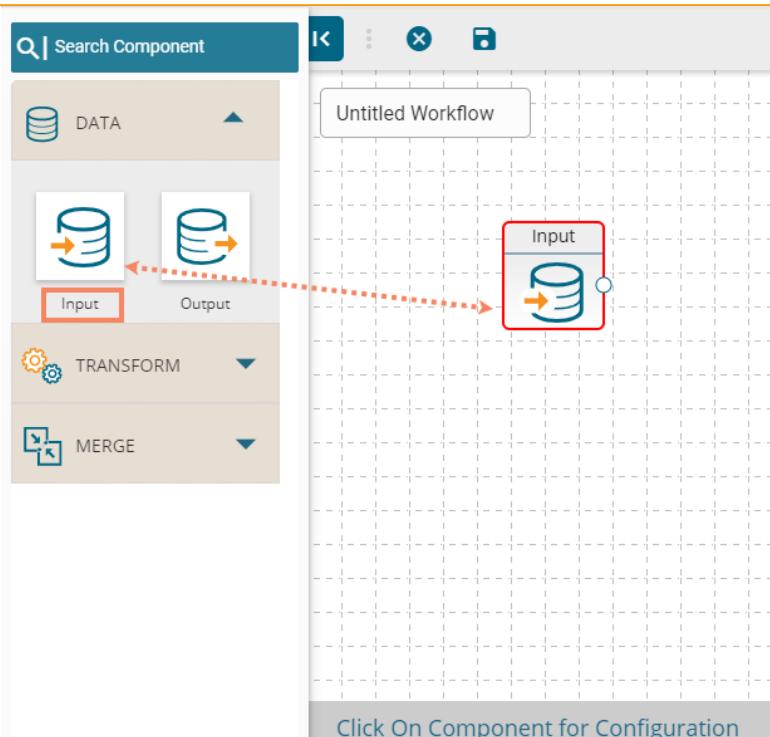

- iii) The user gets redirected to the **Workflow Editor**.
- iv) The Workflow editor exposes the user to the following aspects to autonomously prepare data:
 - a. Data
 - b. Transform
 - c. Merge

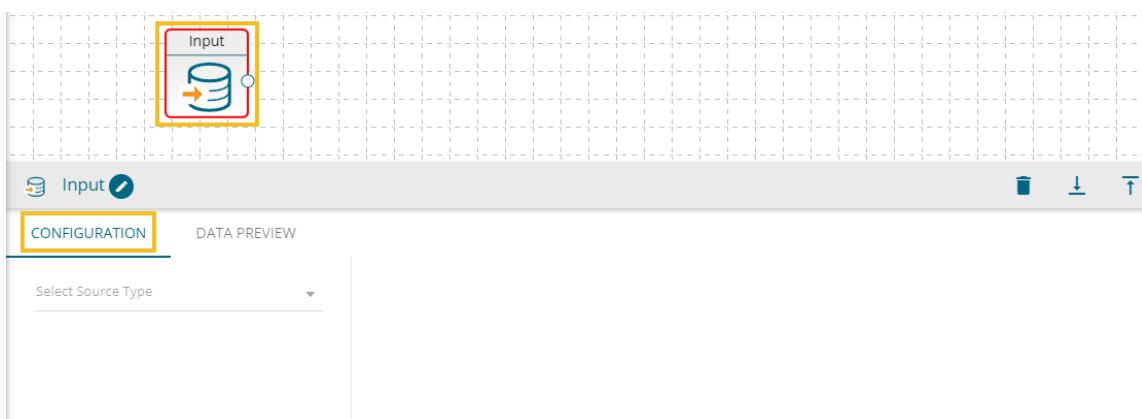

4.2. Extracting Data: Full and Incremental

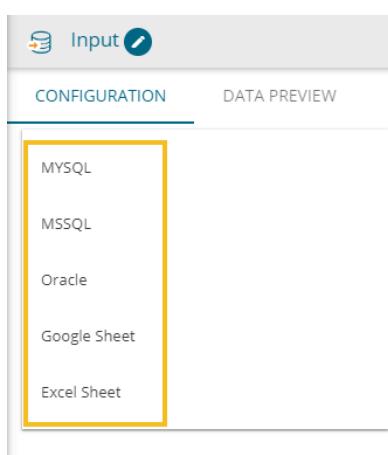

- i) Navigate to the Workflow Editor.
- ii) The 'Data' option gets selected by default.
- iii) Drag and drop the 'Input' component onto the workflow editor.

- iv) Click on the dragged Input component to get the configuration tab.

- v) Select a database type using the '**Select Source Type**' drop-down menu (At present only MYSQL, MSSQL, Oracle, Google Sheet, and Excel Sheet are supported).

- E.g., In this case, the selected data source type is **MySQL**.
- vi) A list of Query Services based on the MySQL database appears.
- vii) Select a Query Service from the list.
- a. **BASIC INFO**
- The '**BASIC INFO**' tab opens (by default) describing the basic information of the selected Database and Query Service.

Parameter	Value
DataBase Name	BDB
QueryName	HiringData
DataSource Name	BDB
Query	select candidate_id,name,gender,source,referral_of,designation,team from hiring_data;

b. **SETTINGS**

- Click the '**SETTINGS**' tab.
- The '**Incremental Load**' option appears.
- Enable the Incremental Load to get the recently updated data.
- The user needs to configure the following options after enabling the Incremental Load:
 - Primary Key**- Select a primary key of the data source by using a checkmark in the given box.
 - Delta Load**-Select a column of type timestamp or date or long which is updated whenever a new row is inserted or updated in the data source. This column is used to load the **Incremented data**. Use the radio button to select a '**Delta Load**' column.

Column	Type	Primary Key	Delta Load
designation	Text	<input type="checkbox"/>	<input type="radio"/>
expected_joining_date	Date	<input checked="" type="checkbox"/>	<input checked="" type="radio"/>
experience	Decimal	<input type="checkbox"/>	<input type="radio"/>
expYrsper_ctc	Decimal	<input type="checkbox"/>	<input type="radio"/>

Note: The users can choose not to enable the '**Incremental Load**' option. In this case, the following details get displayed, and the complete data gets extracted.

The screenshot shows the 'SETTINGS' tab selected. Under 'INCREMENTAL LOAD', the checkbox is unchecked. The 'DATA PREPARATION' section contains a search bar and a table with four rows:

Columns	Type
designation	Text
expected_joining_date	Date
experience	Decimal

Below the table, there is another row: 'expvrsper ctc' with 'Decimal' type.

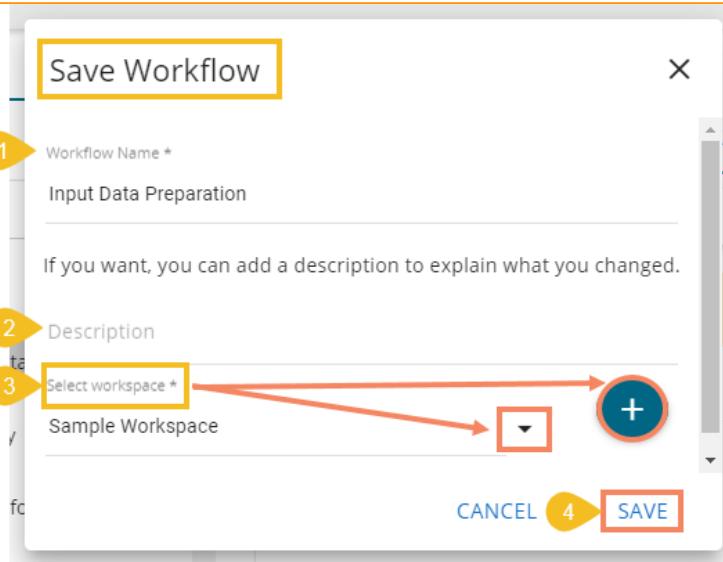

c. DATA PREPARATION

- i. Click the '**DATA PREPARATION**' tab.
- ii. Two options get displayed to proceed with the action of data preparation.
 1. Launch Data Prep
 2. Refresh Metadata

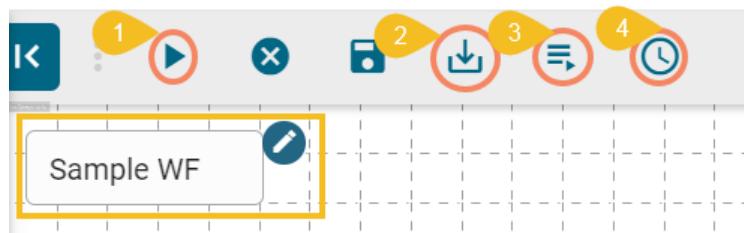

The screenshot shows the 'DATA PREPARATION' tab selected. Below it are two buttons: 'Launch Data Prep' and 'Refresh Metadata'. A table below has three columns: 'S No.', 'Actions taken', and 'Affected Column(s)'. The first row is highlighted in yellow.

S No.	Actions taken	Affected Column(s)

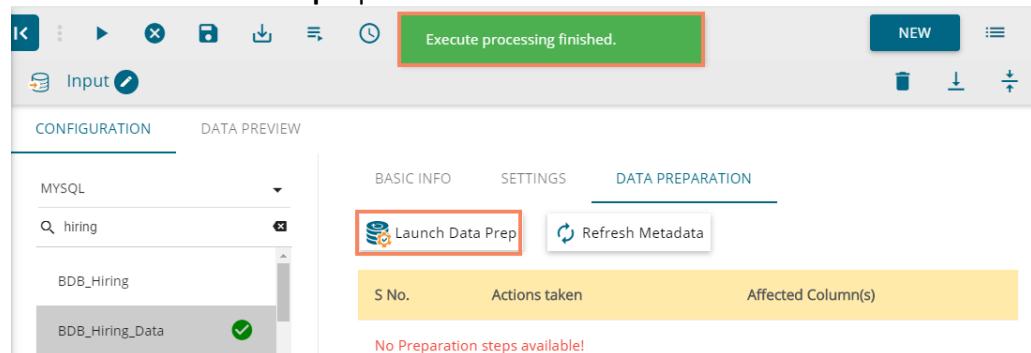

- iii. A window opens prompting to save the workflow.
 1. Provide a Workflow Name.
 2. Describe the workflow (Optional).
 3. Select a Workspace from the drop-down menu or create a new workspace.
 4. Click the '**SAVE**' option.

- iv. The workflow gets saved by the given name, and it displays on the workspace.
- v. The following icons appear in the workflow editor toolbar:
 1. Save & Run Preview
 2. Save As
 3. Save and Execute
 4. Schedule

- vi. The 'Launch Data Prep' gets enabled only after saving the workflow.
- vii. Click the 'Launch Data Prep' option.

- viii. The Data Preparation plugin gets launched.

The screenshot shows the Data Preparation interface. At the top, there are three buttons: 'Export Settings', 'Export Steps to ETL' (which is highlighted with a red box), and 'Export Steps to Pipeline'. Below these are two panels. The left panel displays a table with columns: candidate_id (integer), name (string), gender (string), and source (string). The right panel shows a bar chart for the 'candidate_id' column, with the y-axis ranging from 50 to 200. A tooltip for 'candidate_id' indicates 'Profile', 'Transforms', and 'Steps: 0'.

- ix. The user can perform the desired transform using the 'Transforms' tab provided on the Data Preparation.
- x. Click the '**Export Steps to ETL**' option.

The screenshot shows the Data Preparation interface with the 'Export Steps to ETL' button highlighted with a red box. On the right, a detailed view of the 'cur_monthly_payment' transform is shown, including tabs for 'Profile', 'Transforms' (which is selected and shows 'Steps: 3'), and 'Steps'. The transform configuration includes options like 'Column', 'Row', 'Find a Function...', 'Fill empty cells with text...', 'Use with:', 'Value', and a 'Submit' button. Below the configuration are buttons for 'Find Anomaly...', 'Flag Duplicates in Columns...', 'Flag Duplicates in Table', and 'Remove Duplicates From Column...'.

- xi. A success message appears to inform about the completion of the export action.

- xii. Click the 'Refresh Metadata' option using the 'DATA PREPARATION' tab.
- xiii. All the performed transforms get listed at the bottom of the tab.

S No.	Actions taken	Affected Column(s)
1	DELETE_COLUMN	["comments"]
2	FILL_EMPTY_WITH_DEFAULT	["bill_start_date"]
3	DELETE_EMPTY_ROWS	["cur_monthly_payment"]

Note:

- The '**BASIC INFO**' tab varies based on the selected Input data source types:
 - The '**BASIC INFO**' tab opens the same information about database and query service for the MSSQL and Oracle data sources types as displayed for the MySQL data source type.
 - The '**BASIC INFO**' tab displays the query information and the concerned email address for the Google Sheet data source type.

QueryName	6Feb Hiring Data dataset
Email	datapreparation.bizviz@gmail.com
Name	BIZVIZ DATA PREPARATION

- The '**BASIC INFO**' tab for the Excel Sheet displays only query name.

QueryName	dataset
-----------	---------

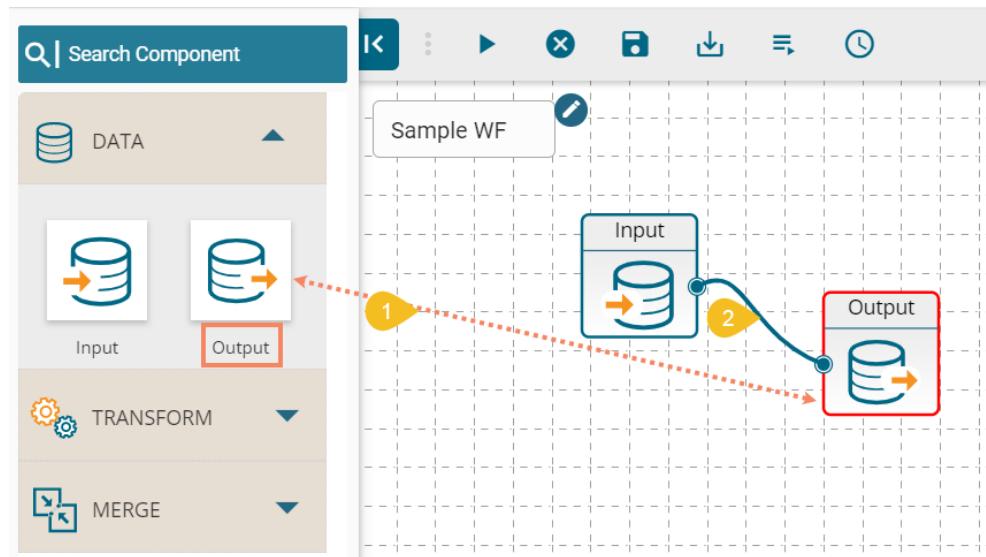

- The '**SETTINGS**' and '**DATA PREPARATION**' tabs display the same set of information as described above for all the Input data source types.
- The user can prepare the input data using the Data Preparation module. Refer the Data Preparation UG for more details.

4.3. Loading Data

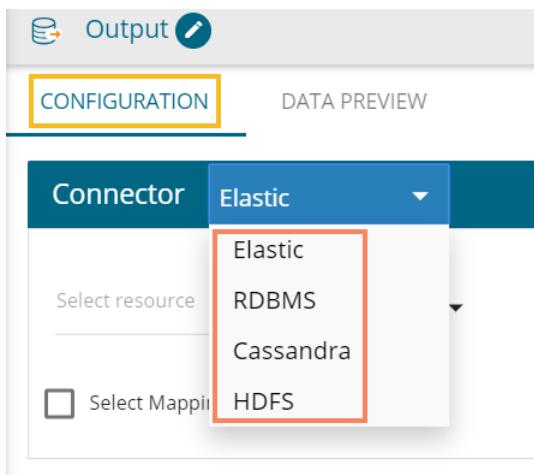

The user can load the extracted data into Output Connectors for visualization via the output

component.

- Drag and drop the '**Output**' component on the Workflow editor.
- Connect it with the configured '**Input**' component.

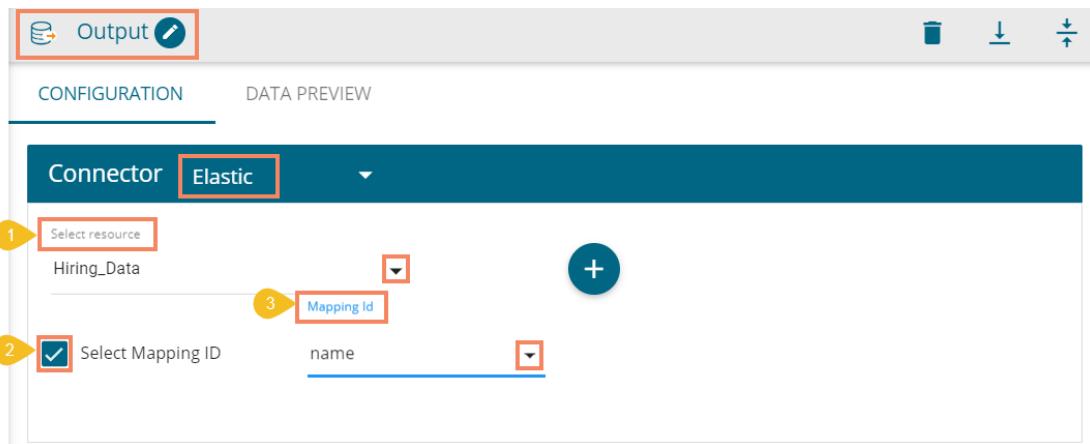

- Click on the '**Output**' component to display the '**CONFIGURATION**' option.
- The following options get displayed:
 - Elastic
 - RDBMS
 - Cassandra
 - HDFS
- Select any one option to access the CONFIGURATION tab.

4.3.1. Configuring Elastic

The following configuration fields open when the selected Output option is Elastic.

- Select a resource using the drop-down menu for the Elastic writer.
- Enable '**Select Mapping ID**' option.
- After enabling the '**Select Mapping ID**' option, the user gets redirected to select a mapping id from the '**Mapping id**' drop-down menu.

Note:

- a. The '**Mapping Id**' drop-down menu appears when the user enables the '**Select Mapping ID**' option with a checkmark.
- b. Click the '**Create Meta Data**' icon to open the configuration window for creating metadata.

4.3.2. Configuring RDBMS

The following configuration fields appear for the RDBMS output connector.

- i) Select a Data Source Type from the drop-down menu.
- ii) Select a Data Source Name from the drop-down menu.
- iii) Select a Database Name from the drop-down menu.
- iv) Select a Table Name from the drop-down menu or Click the '**Add New Table**' icon to Create a New Table.
- v) Choose a Table Operation from the given choices:
 1. Overwrite: By choosing Overwrite as operation, the existing records gets overwritten in the selected table.
 2. Append: By choosing Append as operation, the extracted records get added at the end of the existing records in the columns of the selected file or table.
 3. Upsert: By choosing Upsert as operation, only new records get added to the file or selected table.
- vi) Click the '**APPLY**' option.

Output

CONFIGURATION DATA PREVIEW

Connector RDBMS

CONFIGURATION PROJECTION

1 Select Data Source Type * MySQL
2 Select Data Source Name * RDBMS_Connector_26

3 Select Database Name * BDB_Hiring_Data
4 Select Table Name * Hiring_FromETL - +

5 Choose Table Operation Overwrite Append Upsert
Batch Size: 1000 No. of Dataset Partition: 10

APPLY

Note: The user gets '**Batch Size**' and '**No. of Dataset Partition**' options only when 'Upsert' is selected as the table operation.

4.3.3. Configuring Cassandra

The following configuration fields appear for the Cassandra output connector.

- i) Select a Data Connector from the drop-down menu.
- ii) Host Name: Displays a preselected Host Name based on the selected data connector.
- iii) Port Number: Displays a preselected Port Number based on the selected data connector.
- iv) User Name: Displays a preselected username based on the selected data connector.
- v) Password: Enter the Password
- vi) No. of Rows in Batch: Set number of Rows that you wish to allow in one Batch (the default value for this field is 1000)
- vii) Select Key Space: Select a Key Space from the drop-down menu
- viii) Replication Factor: Enter the Replication Factor
- ix) Select Columns: Select Columns using the drop-down menu
- x) Select Table: Select an existing table from the drop-down menu or choose the '**Create New Table**' option to create a new table.
- xi) Consistency: Select a Consistency option from the drop-down menu
- xii) New Table: Provide a title to the newly created table using the '**New Table**' field
- xiii) New time uuid column name: Provide a name for the new Time UUID Column

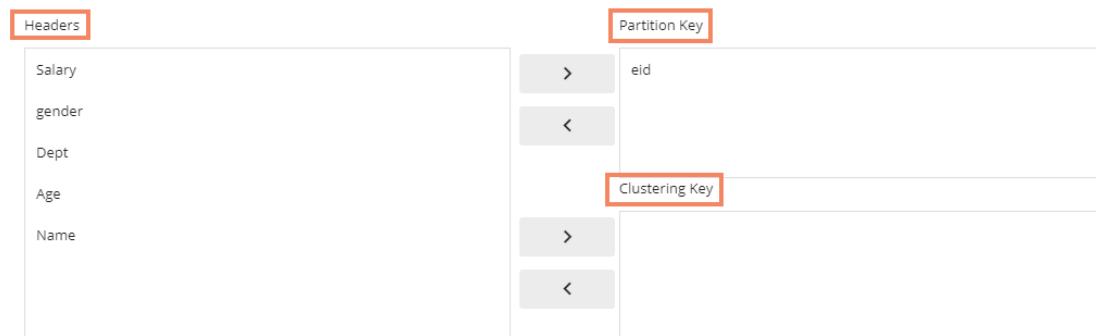

Output

CONFIGURATION DATA PREVIEW

Connector **Cassandra**

Select Data Connector cassandra_4.5_etl	Host Name	Port Number
User Name cassandra	Password	No Of Rows In Batch 1000
Select Key Space pa	Replication Factor	Select Columns Salary, gender, Dept, Age, Name
Select Table Create New Table	Consistency	ONE
New Table employee	New time uuid column name	eid

- xiv) **Headers:** All the columns from the data set get listed.
- xv) **Partition Key:** The Partition Key determines which node stores the data. It is responsible for data distribution across the nodes.
 - a. The UUID Column name gets displayed under the ‘Partition Key’ window.
 - b. The user can select and move any column from ‘Header’ (Select Column) to ‘Partition Key’ space.
 - c. The sequence of the columns listed under Partition Key can be arranged by using ‘Up’ or ‘Down’ options.
- xvi) **Clustering Key:** The Clustering Key is a storage engine process that sorts data within the partition. It determines per-partition clustering.
 - a. The items listed under the Clustering Key box can be arranged by using ‘Up’ or ‘Down’ options.
 - b. Users can select any column from ‘Headers’ (Select Column) to ‘Clustering Key’ space.

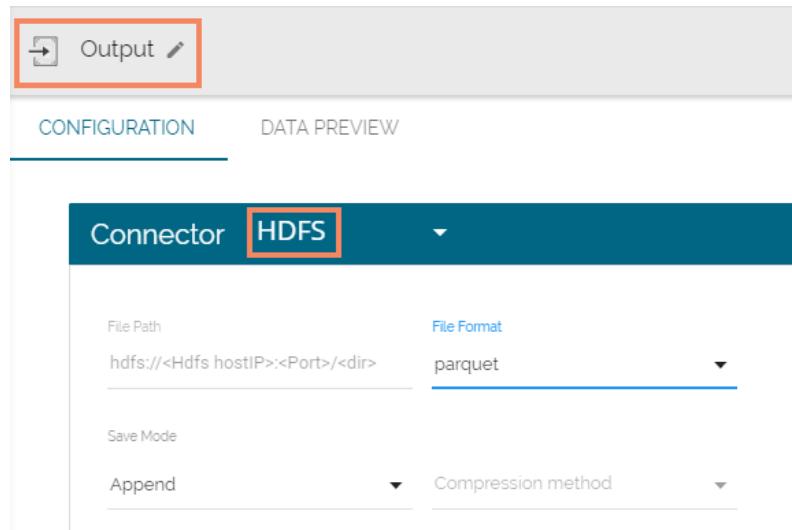

4.3.4. Configuring HDFS

The following fields appear for the HDFS output connector.

- i) Provide file path
- ii) Select a File Format from the below given choices in the drop-down menu.
 1. Parquet
 2. Json
 3. Avro
 4. CSV

- iii) Select a Save Mode from the below given choices in the drop-down menu.
 - 1. Append
 - 2. Overwrite
 - 3. Error
 - 4. Ignore
- iv) Select a Compression Method from the below given options in the drop-down menu.
 - 1. Gzip
 - 2. Snappy
 - 3. None

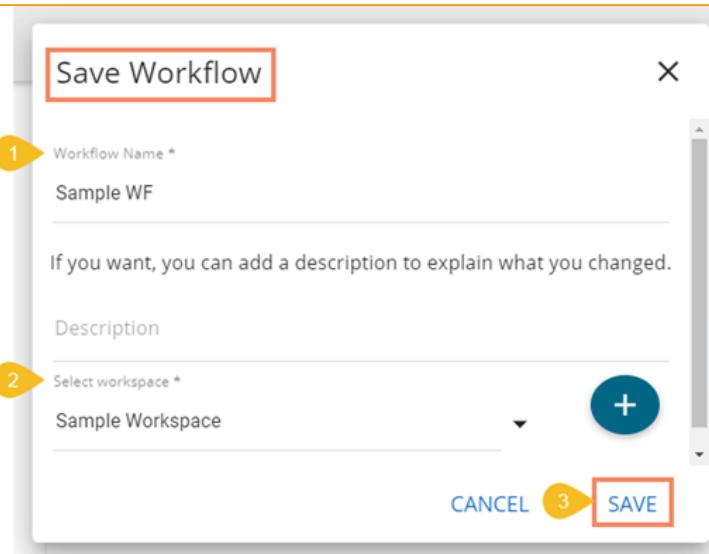

Note: The user should run or execute the workflow after configuring the Cassandra and HDFS output connectors.

4.4. Saving a Workflow

Users are provided with two options to save a workflow.

- i) Click the 'Save'  icon from the workflow editor header.
- ii) A new window appears to redirect the users to save the workflow.
 - a. Workflow Name: Provide a name for the Workflow (mandatory field)
 - b. Description: Enter Description for the Workflow (Optional)
 - c. Select Workspace: Select a workspace from the drop-down menu or Add a new Workspace by clicking the 'Add'  icon.
- iii) Click the 'SAVE' option.

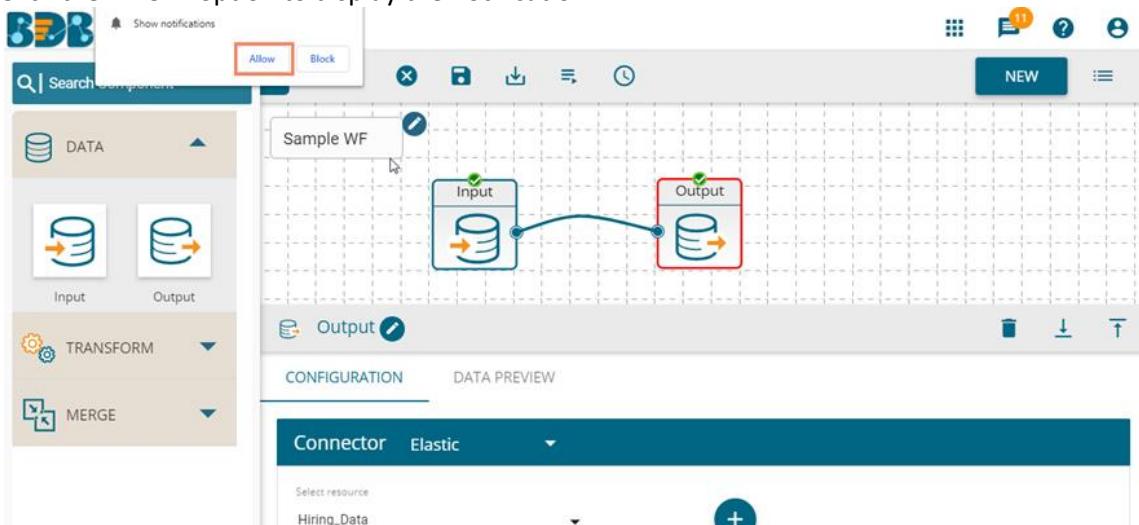

Note: The user can use the 'Save As' icon if they wish to save it in another workspace.

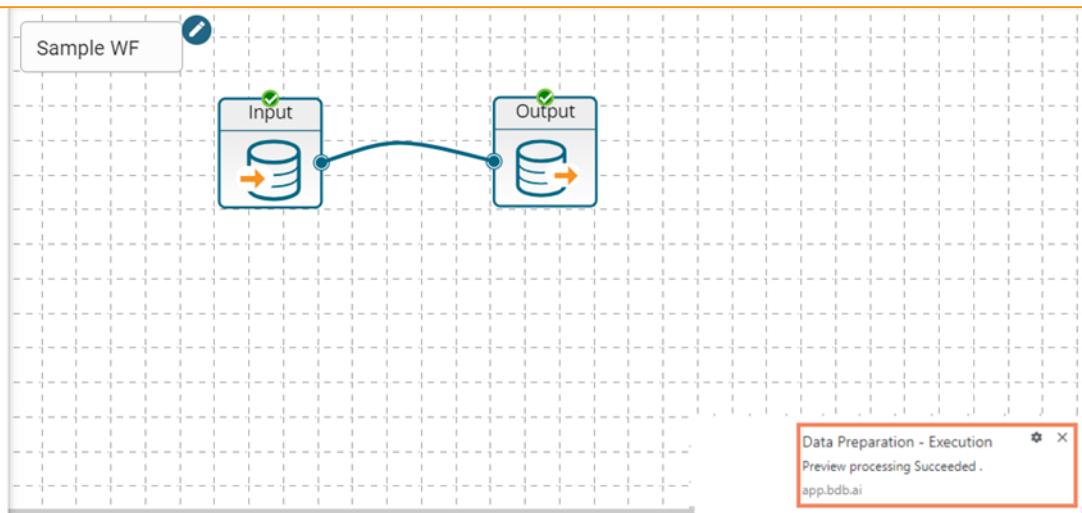

4.5. Save & Run Preview

The 'Save & Run Preview' icon appears only for the saved workflows. The users can get the data preview only after running the workflow using this option.

- i) After saving a workflow, Users can access the 'Save & Run Preview' option on the workflow editor toolbar.
- ii) Click the 'Save & Run Preview' option.
- iii) The ongoing execution process gets displayed through a continuous blue line.
- iv) The users get notified about the beginning and end of the execution process by pop-up messages.
- v) After the execution gets completed, a green tick mark appears on the top of each component in the workflow. The input data with a green checkmark is ready to preview.
- vi) A pop-up message appears asking permission for showing the notifications.
- vii) Click the 'Allow' option to display the notification.

- viii) A notification appears to inform about the preview process status.

- ix) Open the '**Data Preview**' tab by clicking the input or output component to view the preview of the extracted or loaded data.

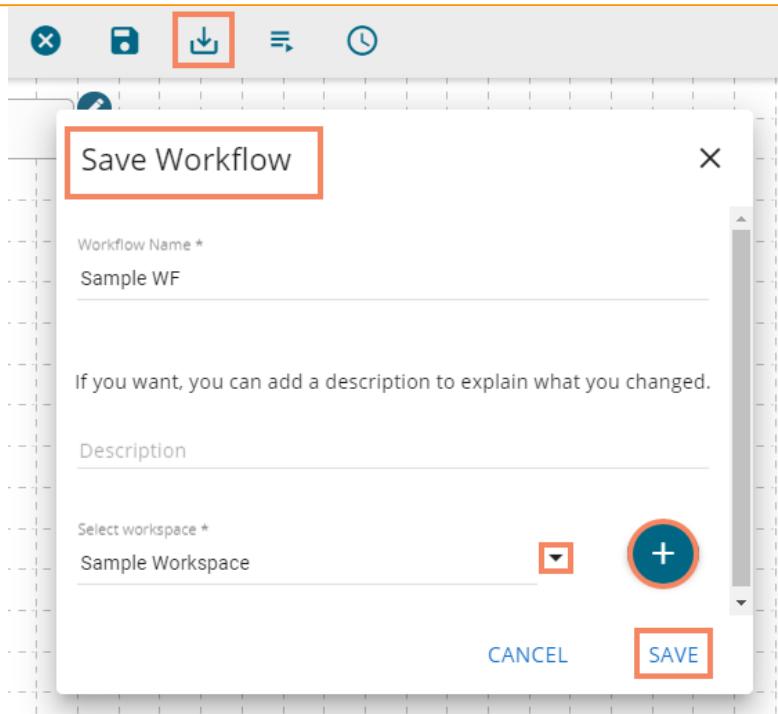

skills	expected_joining_date	joining_status	current_status	experience
Dot Net Manager	2013-01-04	joined	joined	11.3
Java	2013-01-04	joined	joined	3.4
Dot Net	2013-01-04	joined	joined	3.8

Note: The users get notifications on the screen for success or failure of the preview processing.

4.6. Save As

By using the '**Save As**' icon, the user can save the workflow to a different Workspace.

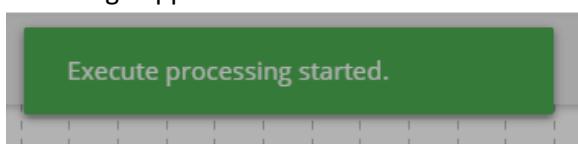

- Click the '**Save As**' icon.
- Modify the workflow name.
- Modify the workflow description.
- Change the Workspace or create new workspace using the '**Add**' icon.

4.7. Save and Execute

By using the '**Save and Execute**' option users can save and write a workflow in the metadata to create a datastore out of it.

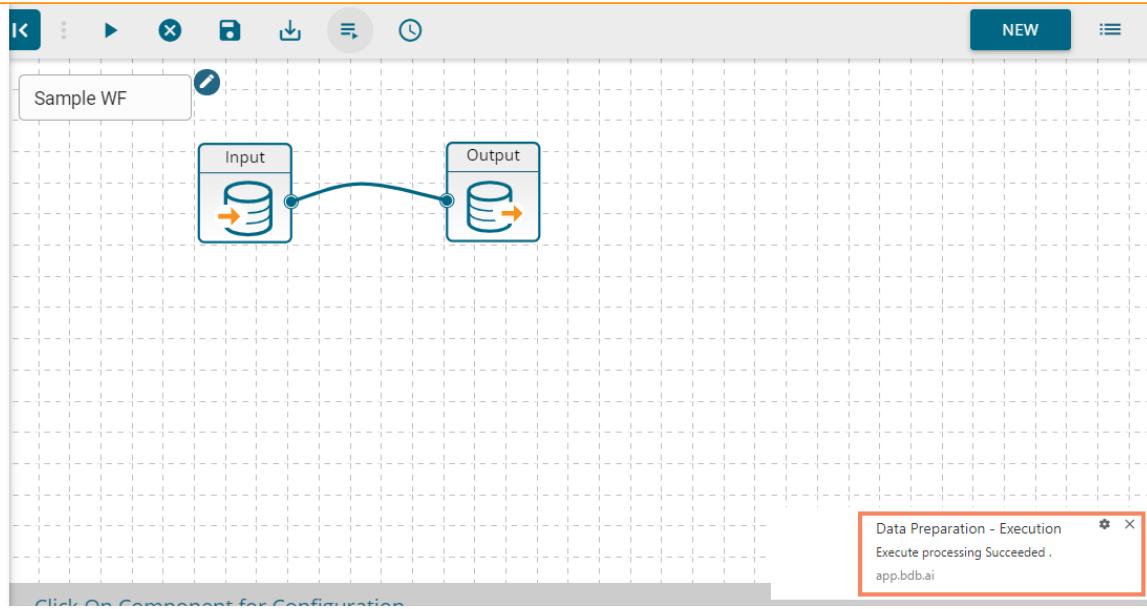

- Click the '**Save and Execute**' icon from the workflow editor toolbar.
- A message appears to inform the user that the execution process has been started.

- The user gets another message to obtain confirmation about the completion of the execution process.

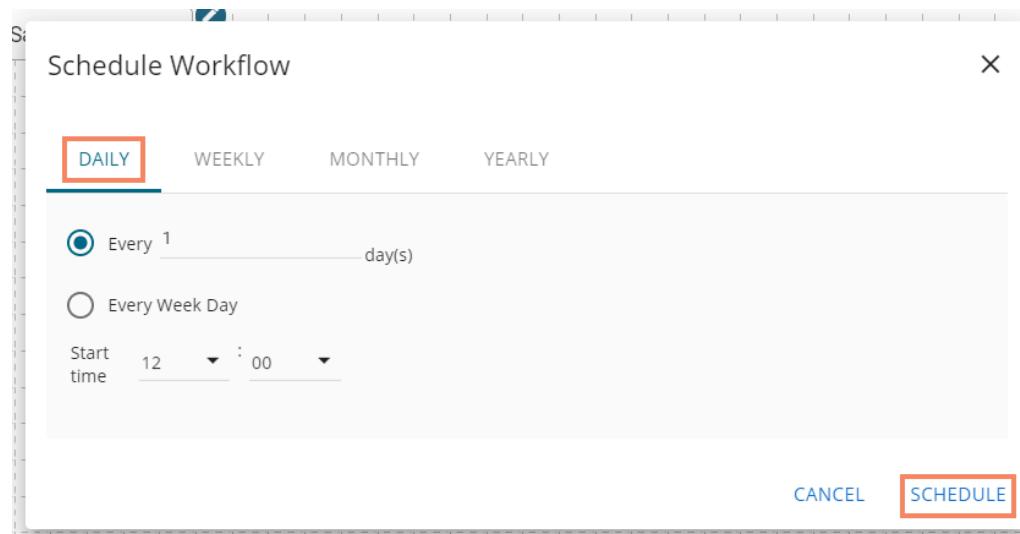

- Another notification appears at the bottom of the page displaying the status of the execution process.

4.8. Schedule a Workflow

Users can schedule a created workflow for data refresh. The Schedule option appears only for the saved workflows.

- i) Create a workflow.
- ii) Save and run the workflow.
- iii) Click the 'Schedule'  icon.
- iv) Click a range of time.
- v) Set the required information asked for the selected time range. E.g., The below-given image displays Schedule Workflow configuration details for the '**DAILY**' option.
- vi) Click the '**SCHEDULE**' option.

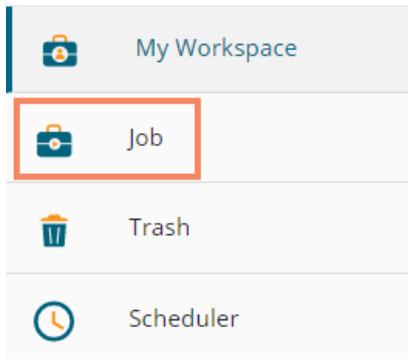

- vii) The selected workflow gets scheduled for the data refresh as per the configured information.

4.9. Job

Users can see the job status for the saved workflows.

- i) Navigate to the ETL landing page.
or
Click the  icon from the workflow editor.
- ii) Select the 'Job' option from the menu list.

- iii) A table appears displaying a list of jobs.

The screenshot shows the 'Jobs' page with a table listing 21 completed workflows (SAMPLE WF). The columns are NAME, EXEC START TIME, LAST UPDATED DATE, and STATUS. The 'DETAILS' tab is selected on the right.

NAME	EXEC START TIME	LAST UPDATED DATE	STATUS
SAMPLE WF	5/17/2019, 10:28:01 PM	5/17/2019, 10:28:01 PM	FINISHED
SAMPLE WF	5/17/2019, 10:26:20 PM	5/17/2019, 10:26:20 PM	FINISHED
SAMPLE WF	5/17/2019, 10:26:05 PM	5/17/2019, 10:26:06 PM	FINISHED
SAMPLE WF	5/17/2019, 9:30:57 PM	5/17/2019, 9:30:58 PM	FINISHED
SAMPLE WF	5/17/2019, 9:17:18 PM	5/17/2019, 9:17:19 PM	FINISHED

- iv) Click on a job from the list.
- v) The 'DETAILS' tab opens, displaying the execution details for the selected job on the right-hand side.

The screenshot shows the 'Jobs' page with the 'SAMPLE WF' row selected (highlighted with a red box). The 'DETAILS' tab is selected on the right, displaying execution details: ExecutionId 381747955, Execution Mode Execute, and Elapsed Duration 00:00:00.

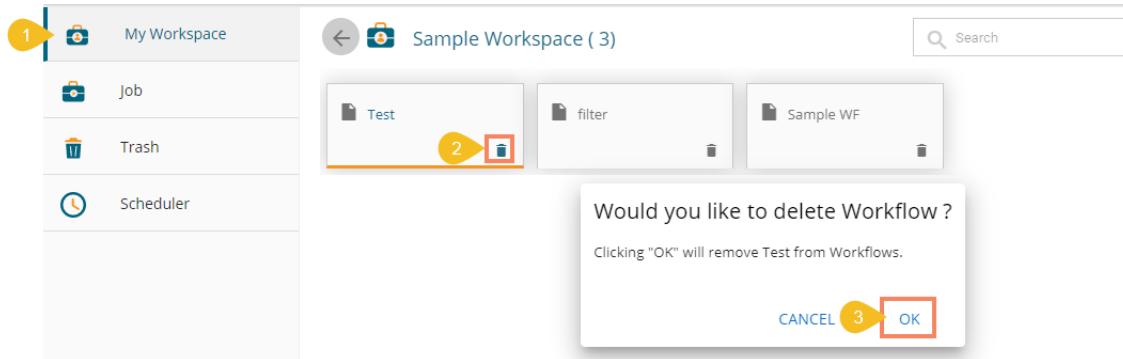

NAME	EXEC START TIME	LAST UPDATED DATE	STATUS
SAMPLE WF	5/17/2019, 10:28:01 PM	5/17/2019, 10:28:01 PM	FINISHED
SAMPLE WF	5/17/2019, 10:26:20 PM	5/17/2019, 10:26:20 PM	FINISHED

Note: The execution details display on the right-hand side of the 'Job' page. Users need to click on the 'STATUS' of a job using the list of jobs.

4.10. Trash

The ‘Trash’ folder is provided to store all the deleted workflows and workspaces. Users can restore the deleted workflows and workspaces using this folder.

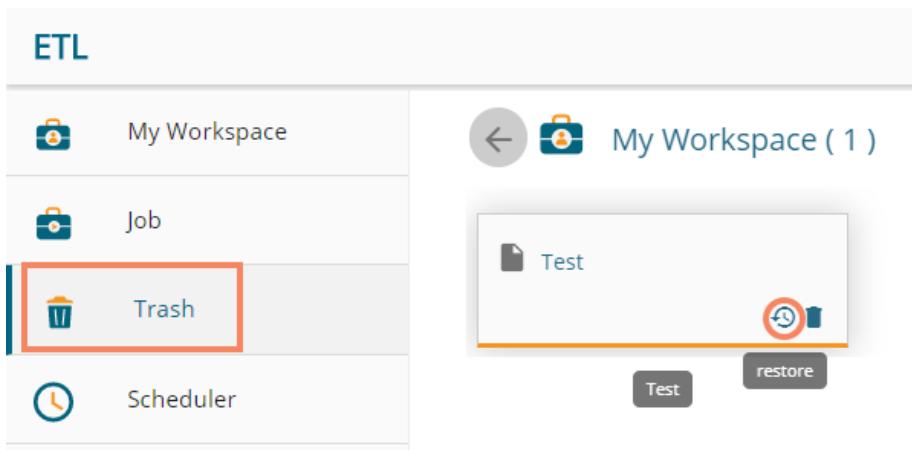

- Navigate to ‘My Workspace’ page.
- Select a workflow and click the ‘Delete’ icon.
- A pop-up window opens to assure about the action of deletion. Click the ‘OK’ option from the pop-up window.

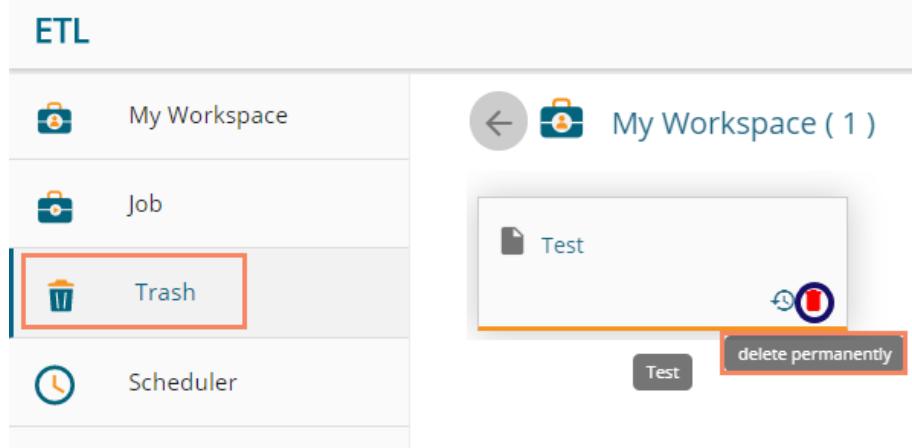

- The Workflow gets deleted and moved to the Trash folder.
- Click on the ‘Trash’ option.
- The Trash folder displays the deleted workflows.
- The ‘Details’ tab displays information about the selected workflow.

- Click ‘Restore’ to restore the selected workflow/workspace.

- Click ‘delete permanently’ 🗑 icon to permanently delete the selected workflow/workspace.

Note:

- Users can check out all the essential features of the ETL module on a relevant input dataset.
- Other options provided on the workflow editor are as described below:

Icons	Name	Description
	Hide and Show Components	Hides or shows the components on the left-hand side.
	Clear Workflow	Clears the current workflow from the workflow editor.
	Navigator	Redirects the users to the following hyperlinks: 1. Workspace 2. Job 3. Trash 4. Scheduler

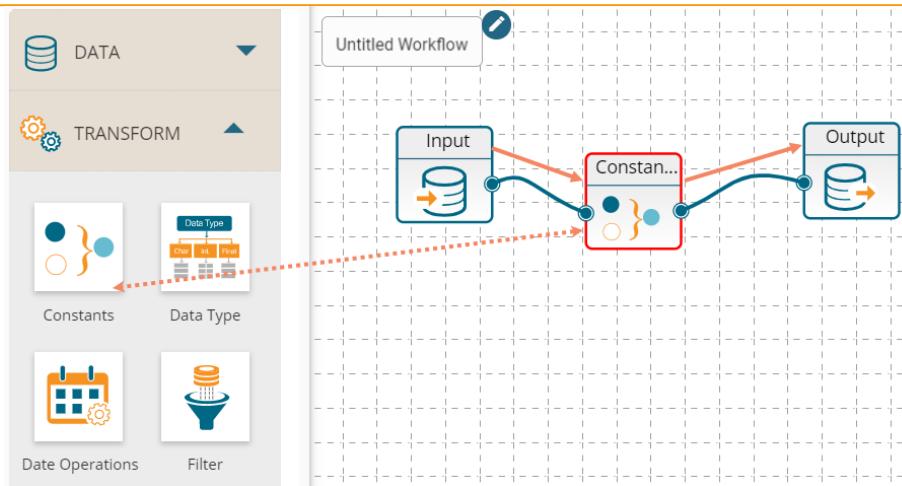

5. Transform

The Transformation components have both input ports and output ports when used in a workflow, and they apply specific transformations to the input data in the transformation stream.

5.1. Constants

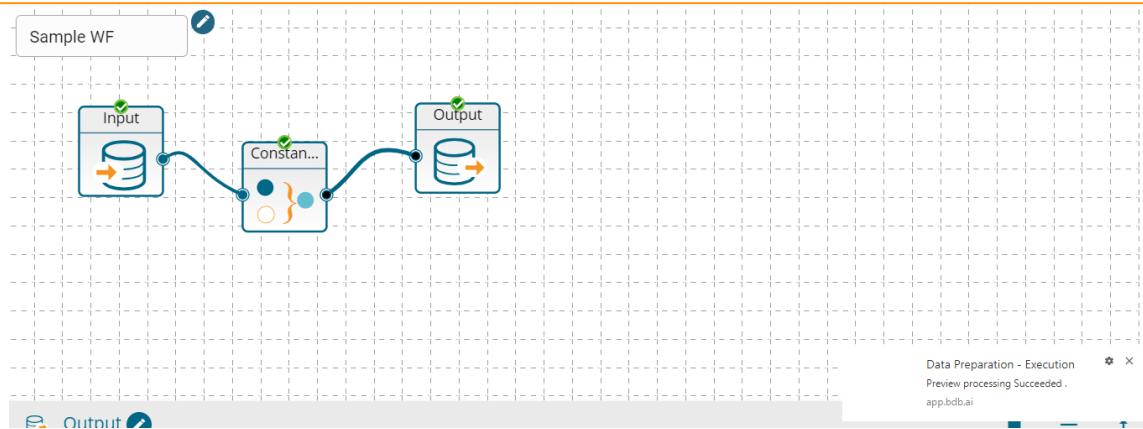

Users can give a corresponding valid constant value for each type of column.

- Navigate to the Workflow editor.
- Connect the '**Constants**' component to the configured input dataset. Connect the output node of the dragged Constants component with the Output component and create a workflow.

- iii) Click on the '**Constants**' component to open the '**CONFIGURATION**' fields.
- iv) Configure the required details for the '**Constants**' component:
 - a. Click the '**ADD NEW COLUMN**' option
 - b. Column Name: Add new columns to the input dataset
 - c. Column Type: Set column type from the drop-down menu
 - d. Constant: Set constant value using the drop-down calendar.
 - e. Click the '**Apply**' option.

- v) A message appears stating that the Constant fields are successfully configured.
- vi) Save the workflow.
- vii) Run/Execute the workflow.
- viii) A notification appears at the bottom of the screen to inform about the process execution status.
- ix) The success of the data preview process gets indicated through the green checkmarks at the top of the components in a workflow.

Note: The user can also use the 'DATA PREVIEW' tab given in the 'Constants' component.

- x) The set constant value gets applied to the selected column in the output dataset.

monthly_salary	comments	usd_billing	Date
87556.33		4000.0	2019-04-25
28155.67		2400.0	2019-04-25
29673.58		2400.0	2019-04-25
63824.17		3000.0	2019-04-25
25603.75		2400.0	2019-04-25
25718.58		2400.0	2019-04-25
56575.33	Relocating	3500.0	2019-04-25

Note:

- a. Click the 'Remove' icon to remove the added constant information.
- b. The Constants component can take current date by clicking the icon.
 - i. Click the icon.
 - ii. The 'current date' option appears for the constant value field.
 - iii. Click the 'Apply' option.

CONFIGURATION DATA PREVIEW

Column Name*
(Add new columns to input data)

Column Type*
(Set column type)

Constant
(Set constant value)

3 Apply

2 [current date]

1

- iv. Run the workflow and open the data preview.
- v. The set data gets added to the column created using the 'Constants' component.

Output

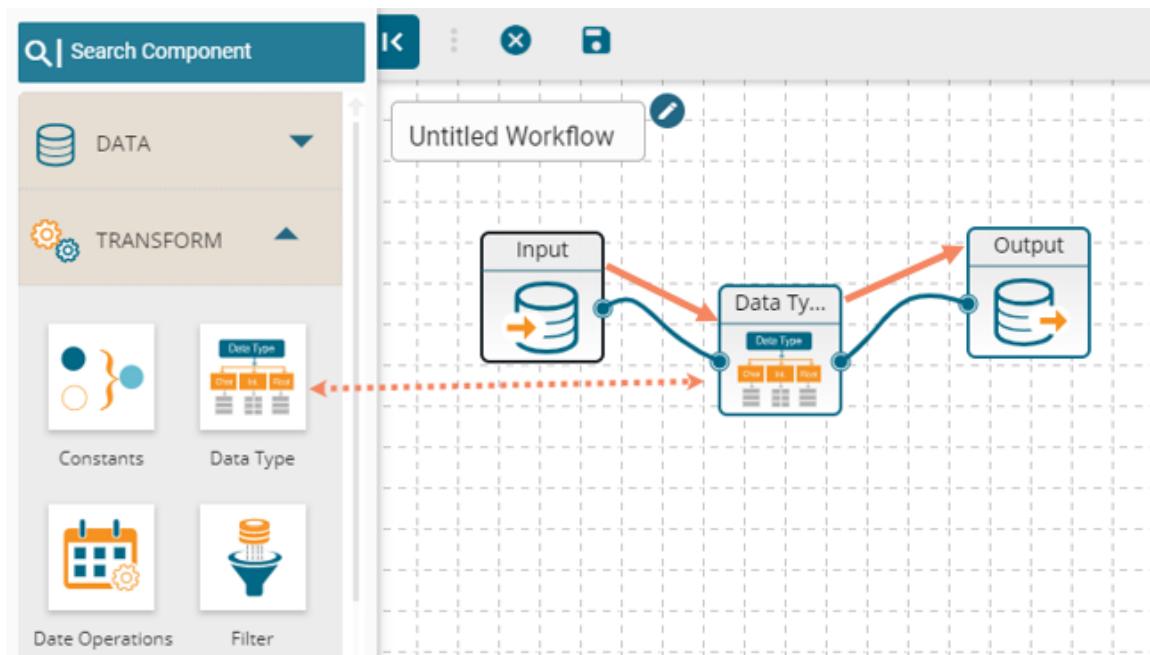

CONFIGURATION **DATA PREVIEW**

monthly_salary	comments	usd_billing	Date
63824.17		3000.0	2019-05-31
25603.75		2400.0	2019-05-31

33565.75		2400.0	2019-05-31

5.2. Data Type

Users can change the data type of the selected columns by using the '**Date Type**' transform.

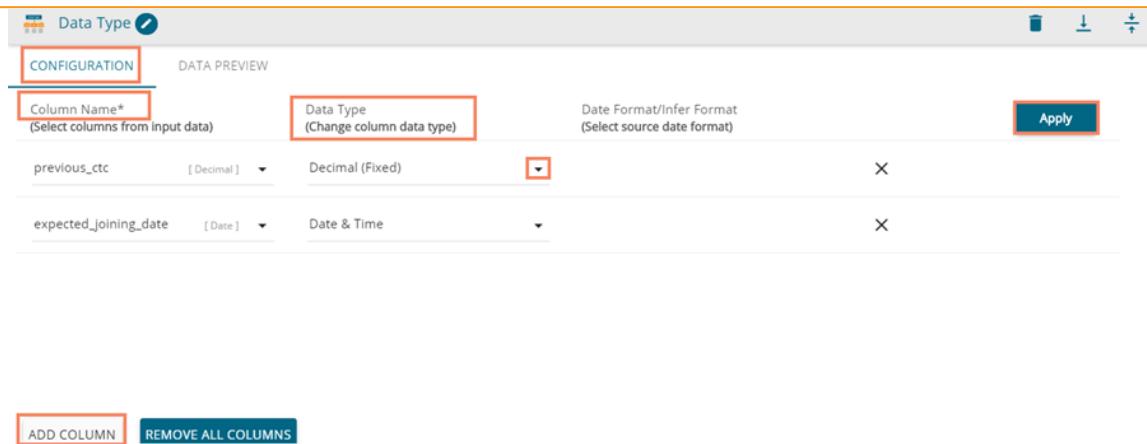

- i) Navigate to the Workflow editor.
- ii) Connect the '**Data Type**' component to the configured input dataset and output component.

- iii) Click on the Data Type component to open the CONFIGURATION tab.
- iv) Click the '**ADD COLUMN**' option to add a new column.
- v) Select the columns and change the column data type using the drop-down menu.
 - a. Column Name: Select columns from input data
 - b. Data Type: Change column data type
 - c. Date Format: Select source date format

E.g. In the following instance, the column data type for the selected columns has been changed from '**Decimal**' to '**Decimal (Fixed)**' and '**Date**' to '**Date & Time**'.

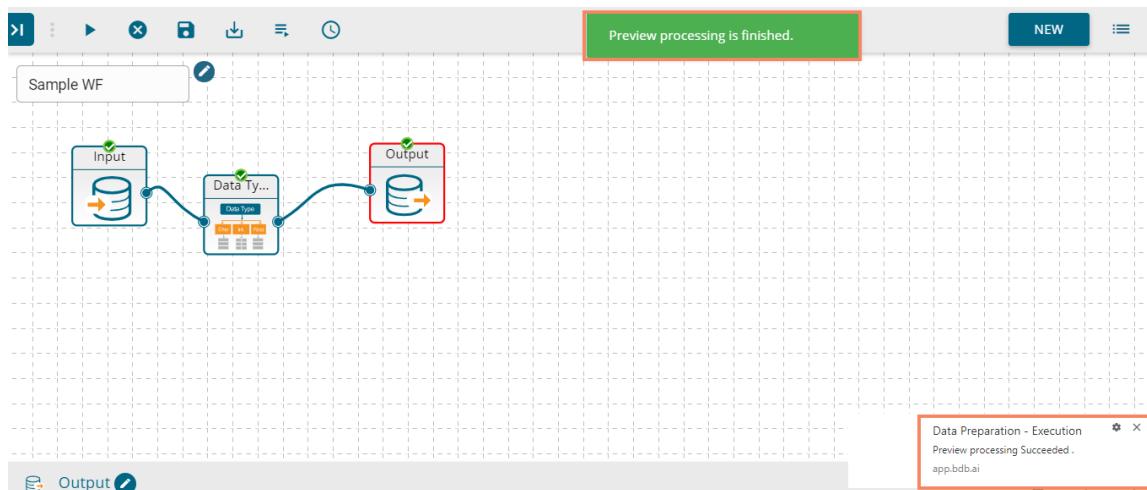

- d. Click the '**Apply**' option.

- vi) A success message appears to confirm the Data Type field configuration.

Datatype fields are configured successfully!

- vii) Save the workflow.
 viii) Run/Execute the workflow.
 ix) The success notification appears, and the components in the workflow get green checkmarks at the top.

- x) Click the 'DATA PREVIEW' tab for the Output component to see the transform result.

Output			
CONFIGURATION		DATA PREVIEW	
skills	expected_joining_date	joining_status	current_status
Dot Net Manager	2013-01-04T00:00:00.000+0000	joined	joined
Java	2013-01-04T00:00:00.000+0000	joined	joined
Dot Net	2013-01-04T00:00:00.000+0000	joined	joined
Java + Sql	2013-01-04T00:00:00.000+0000	joined	joined
Java	2013-01-04T00:00:00.000+0000	joined	joined
Java	2013-01-04T00:00:00.000+0000	joined	joined
Dot Net	2013-01-04T00:00:00.000+0000	joined	resigned
Dot Net	2013-01-04T00:00:00.000+0000	joined	joined

- xi) Users can compare the data previews of the Input and Data Type modules (E.g., the selected input, in this case, contains the following column types)

Input			
CONFIGURATION		DATA PREVIEW	
skills	expected_joining_date	joining_status	current_status
Dot Net Manager	2013-01-04	joined	joined
Java	2013-01-04	joined	joined
Dot Net	2013-01-04	joined	joined
Java + Sql	2013-01-04	joined	joined
Java	2013-01-04	joined	joined
Java	2013-01-04	joined	joined
Dot Net	2013-01-04	joined	resigned
Dot Net	2013-01-04	joined	joined

Note:

- a. Users can get the same Data Preview as Output dataset while opening the ‘DATA PREVIEW’ tab from any selected transform component. E.g., The ‘DATA PREVIEW’ tab for the ‘Data Type’ Transform component is as displayed below.

Data Type			
CONFIGURATION		DATA PREVIEW	
skills	expected_joining_date	joining_status	current_status
Dot Net Manager	2013-01-04T00:00:00.000+0000	joined	joined
Java	2013-01-04T00:00:00.000+0000	joined	joined

Java + Sql	2013-01-04T00:00:00.000+0000	joined	joined
Java	2013-01-04T00:00:00.000+0000	joined	joined
Java	2013-01-04T00:00:00.000+0000	joined	joined
Dot Net	2013-01-04T00:00:00.000+0000	joined	resigned
Dot Net	2013-01-04T00:00:00.000+0000	joined	joined

5.2.1. Inferring Date & Date Time Formats

The Infer Date/Data Time functionality is provided for users to include various Date/Date Time formats which are not provided by ETL plugin. This functionality works only on the Text type of columns.

- i) Select an input data set with some columns in the text data type (preferably the Input data set should have a column displaying Date in the Text data type).

Columns	Type
Country	Text
Item Type	Text
Order Date	Text
Order ID	Text
Order Priority	Text
Region	Text

- ii) Connect the configured dataset with the Data Type transform component.
- iii) Provide the required information to configure the 'Data Type' component.
 - a. Pass the Date column(s) that is in Text data type from the input dataset.
 - b. Change the column data type using the drop-down icon provided for the 'Data Type' field.
 - c. The Date Format/Infer Format displays a drop-down icon to select an option for the source data format.
 - d. Use a checkmark in the given box to enable the Infer Format.
 - e. Click the 'Apply' icon.
- iv) Run and execute the workflow.

- v) Open the 'DATA PREVIEW' tab of the Data Type component.
- vi) Check the column provided for the Data Infer Format function. It displays the selected date column in the original order (E.g., In this case, the selected column is 'Order Date').

Total Revenue	Total Cost	Total Profit	Order Date
694868.46	481808.34	213060.12	
1980685.3	1127652.19	853033.11	
49253.07	36530.68	12722.39	2014-12-07
1569766.23	1180466.46	389299.77	2016-01-05
370822.42	218868.51	151953.91	2016-10-04
4608613.17	3715141.92	893471.25	2016-04-11
1111240.14	709655.52	401584.62	
25545.54	18946.96	6598.58	

- vii) Check the selected Date column from the Input ‘DATA PREVIEW’ tab.
viii) The data gets displayed in the selected Date Format.

Order Priority	Order Date	Order ID
M	8/31/15	897751939
H	11/20/10	599480426
L	6/22/17	538911855
L	2/28/12	459845054
M	12/8/10	626391351
H	8/20/10	472974574
M	3/2/11	854331052
L	11/9/15	895509612

Note:

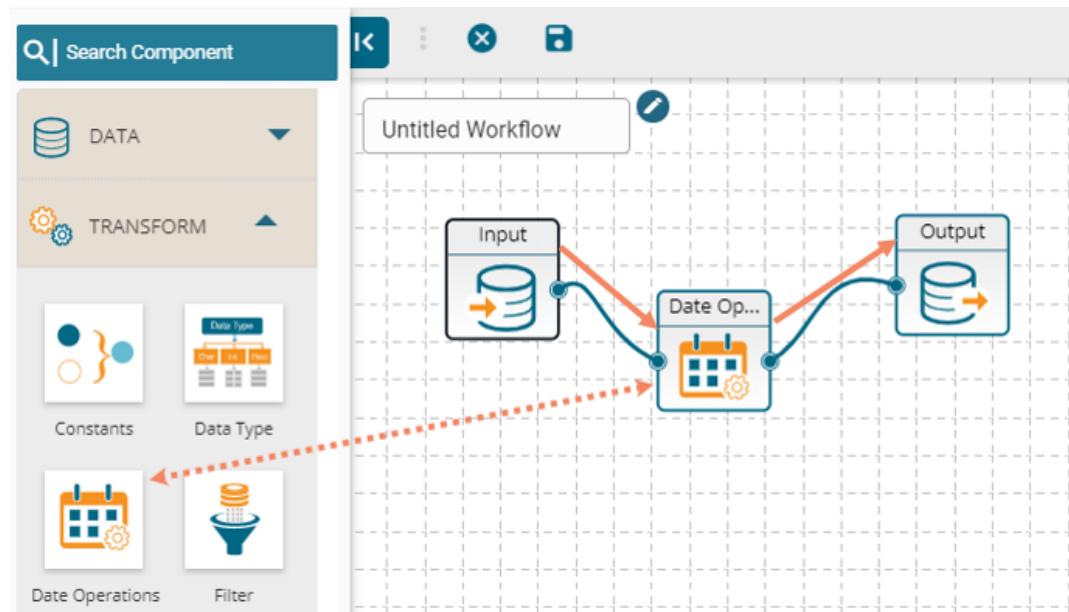

- a. The functionality only works for the ‘Text’ type of column.
- b. If the source data format does not benefit in the selected infer format, then those entries do not list in the output.
- c. Use the ‘ADD COLUMN’ option to add a new column for the Data Type change

5.3. Date Operations

Users can perform various operations of dates addition/subtraction with integers or other dates. It also allows extraction of parts of times like day-part, month part, etc.

- i) Navigate to the Workflow editor.

- ii) Connect the ‘Date Operations’ component to the configured input dataset and output component.

- iii) Configure the ‘Date Operations’ component as described below:
- Click the ‘ADD NEW COLUMN’ option.
 - Column Name: Provide a name for the New Column.
 - Operation: Select a data operation option from the drop-down menu.
 - Column/Value: Select a column or value for operations.
 - By selecting the ‘column’ option, a drop-down menu appears.
 - By selecting the ‘value’ option, users get redirected to enter a value.
E.g., In the following image, the selected option is Value for the operation, and three as a constant value gets added to the selected date.
 - Click the ‘Apply’ option.

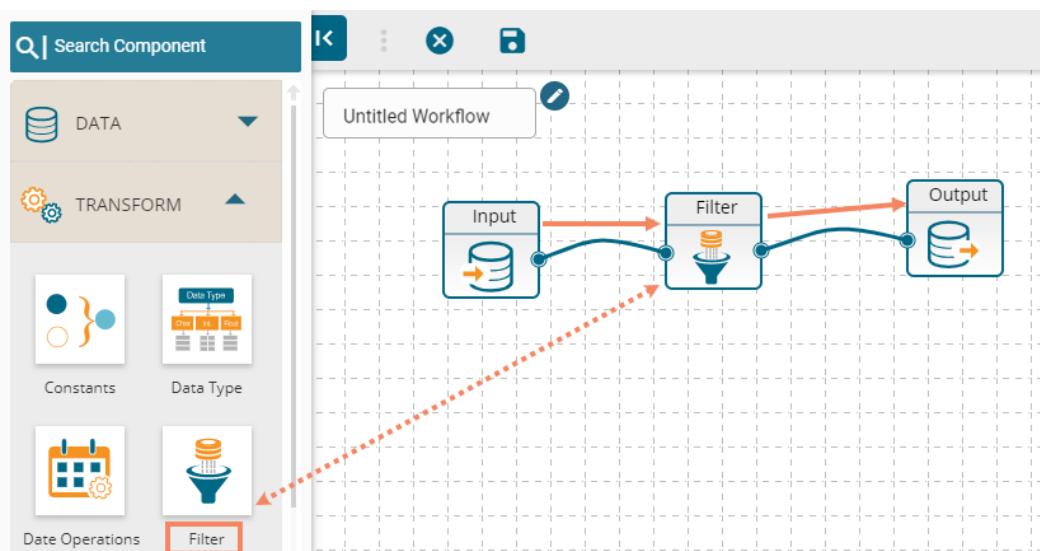

- Save the workflow.
- Run/Execute the workflow.
- Open the ‘DATA PREVIEW’ tab of Date Operation or Output component.
- The newly configured Date Column ‘Next Date’ gets added to the data with the set value.

Source	Team	USDBilling	Next Date
Indeed	BU 6	4000.0	2019-06-06
Orgspire	BU 6	4000.0	2019-06-06
Orgspire	BU 11	2600.0	2019-06-06
Referral	BU 6	2300.0	2019-06-06
Referral	BU 6	1750.0	2019-06-06
BMS Innolabs	BU 7	0.0	2019-06-06
Orgspire	BU 7	0.0	2019-06-06

5.4. Filter

Users can filter the input dataset by specifying conditional expressions using the '**Filter**' transform. Multiple filter conditions can be imposed in the same transform. The following table lists the map of data types and permissible filter conditions.

- Navigate to the Workflow editor.
- Drag the '**Filter**' component.
- Connect the '**Filter**' component to the configured input dataset and output component.

- Configure the '**Filter**' Component as described below:
 - Select a filter rule from the drop-down
 - ALL:** By selecting this option filter gets applied only if all the added conditions are true
 - ANY:** By choosing this option filter gets applied even if any one condition is true

E.g., in this case, the selected Filter Rule is 'ANY' so the data preview displays data satisfying either of the filter conditions.
 - Column Name: Choose a column from the drop-down menu
 - Operation: Select an operation from the drop-down menu
 - Type: Select one option out of '**Column**' or '**Value**'
 - Compare: Enter a value>Select a column from the list to compare with

- f. Click the 'ADD NEW COLUMN' option to insert fields for the new column
- g. Click the 'Apply' option.

Filter rules : Include rows that meet ANY of the following rules

- 1 Column Name* (Choose column)
- 2 Operation* (Select operation)
- 3 Type* (Select column/value)
- 4 Compare* (Enter>Select value to compare)
- 5 ADD NEW COLUMN
- 6 Apply

candidate_id	[Whole Number]	Equals	Value	104
name	[Text]	Starts with	Value	P

- v) Save the workflow.
- vi) Run the workflow.
- vii) The input data gets filtered as per the applied conditions.

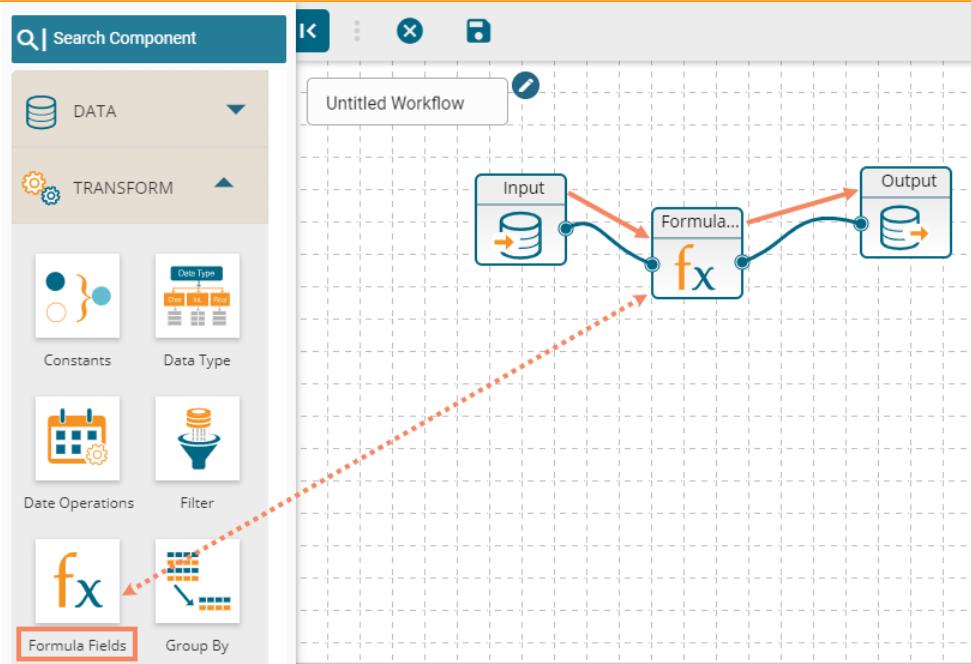

DATA PREVIEW

id	candidate_id	name	gender
196	196	Poorvi	Female
148	148	Pankaj Kumar	Male
216	216	Pavan	Male
169	169	Pradeep	Male
147	147	Pragati	Female
144	144	Praful Managoli	Male
104	104	Virat Mishra	Male

5.5. Formula Fields

Users can perform most common arithmetic operations (add, subtract, multiply and divide) on constants and columns.

- i) Navigate to the Workflow editor.
- ii) Connect the 'Formula Fields' to the configured input dataset and output component.

- iii) Configure the '**Formula Fields**' component as described below:
- Column Name: Enter a name for the formula column
 - Calculation Type: Select a calculation type using the drop-down menu
 - Select Columns for Calculation: Select columns to be used in the calculation. Users can choose either a column or enter a value to complete the calculation process.
- E.g. The 'Value' option is chosen in the below given example.

- iv) Save the workflow.
 v) Run the workflow.
 vi) The calculated column gets added in the output dataset.

Output (edit)

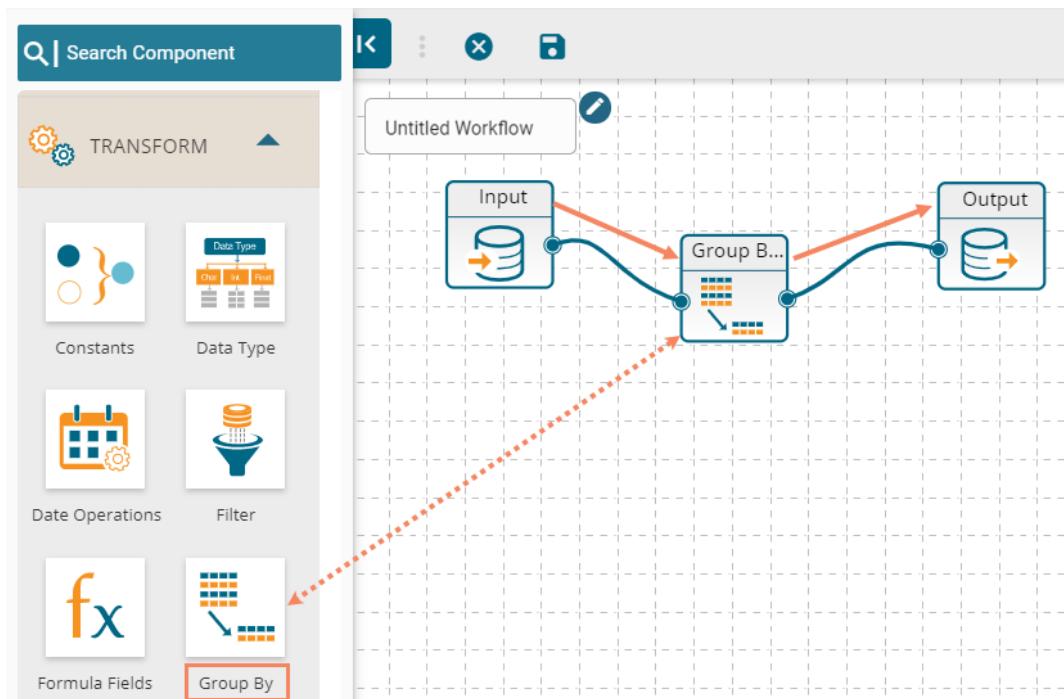

CONFIGURATION DATA PREVIEW

previous_ctc	offered_ctc	monthly_salary	Formula Field Column
2000000.0	1800000.0	150000.0	-200000.0
2000000.0	1500000.0	125000.0	-500000.0
650000.0	1024000.0	85333.0	374000.0
580000.0	650000.0	54167.0	70000.0
500000.0	520000.0	43333.0	20000.0
730000.0	980000.0	81667.0	250000.0
510000.0	650000.0	54167.0	140000.0

5.6. Group By

The '**Group By**' feature allows multiple aggregations on the same or different columns. Users can obtain numerous aggregations in the same transform. The aggregated values are added to a new column.

- i) Navigate to the Workflow editor.
- ii) Connect the '**Group By**' component to the configured input dataset and output component.

- iii) Configure the '**Group By**' component as described below:
 - a. Column Name: Select a column from the drop-down menu
 - b. New Column: Enter a title for the aggregate column
 - c. Column Aggregate: Select a column from the drop-down menu to apply aggregation
 - d. Aggregate Type: Select an aggregation operation from the drop-down menu

Group By

CONFIGURATION

1 Column Name*
(Choose column)

Field Name

2 New Column*
(Aggregate column)

3 Column Aggregate*
(Select column to aggregate)

4 Aggregate Type*
(Select aggregate operation)

5 **Apply**

Add New Column

- iv) Save the workflow.
- v) Run the workflow.
- vi) The aggregated column gets displayed in the output data preview.

Output

DATA PREVIEW

candidate_id	Aggregate Column
191	191
222	222
112	112
113	113
155	155
167	167
198	198

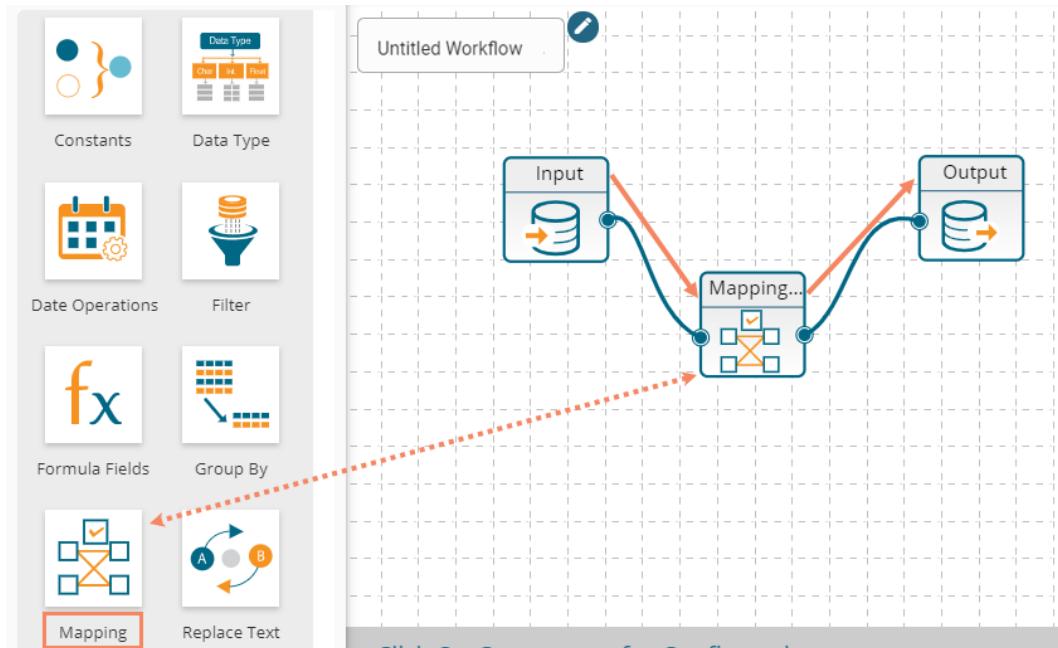

Note: The supported data types and aggregate operations are displayed in the following table:

Data Type	Aggregate
Text	Count
Date	First Value
Date Time	Last Value
Whole Number	Sum
Decimal	Average
Decimal (Fixed)	Minimum Maximum Standard Deviation Count First Value Last Value

5.7. Mapping

Users should be able to select, remove or rename columns in the input dataset to fit the structure of the sink.

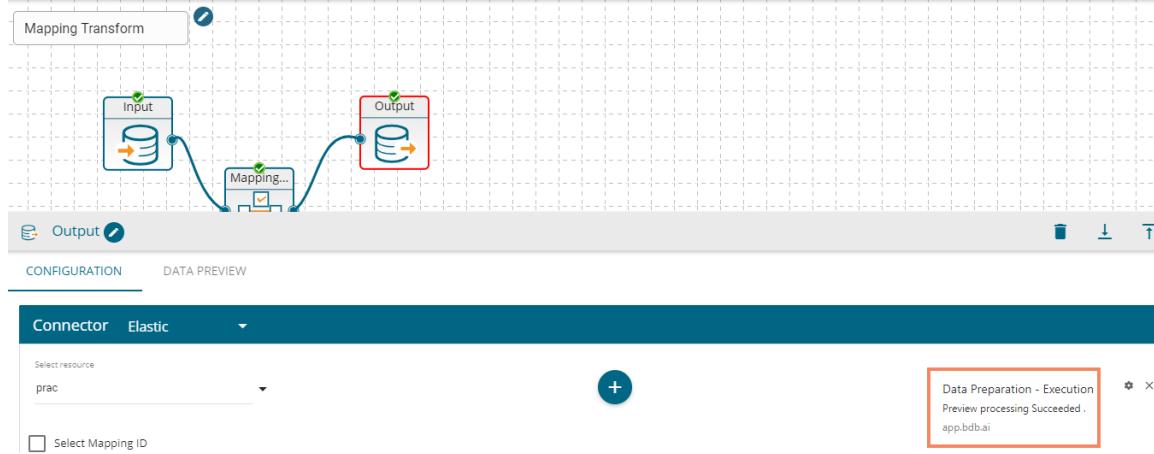

- Navigate to the Workflow editor.
- Connect the '**Mapping**' component to the configured input dataset and output component.

- Configure the '**Mapping**' component:
 - Column Name: Select a Column from the input data using the drop-down menu
 - Rename: Rename the selected column of the input data
 - Choose either of the options from the below given choices:
 - ADD COLUMN: Click this option to add one more column from the input dataset
 - ADD ALL COLUMNS: Click this option to map all the columns from the input dataset
 - Click the '**Apply**' option.

Note: The '**REMOVE ALL COLUMNS**' gets enabled after clicking on the '**ADD ALL COLUMNS**' option.
Click this option to remove all the added columns for mapping.

- iv) A success message appears to confirm the Mapping Component configuration.
- v) Save the workflow.
- vi) Run the workflow.
- vii) The notification messages appear to display the update of the data preview process.
- viii) A notification appears to confirm the successful completion of the Data Preview process. All the components in the workflow get green checkmark at the top.

- ix) The aggregated column gets displayed in the 'DATA PREVIEW' tab of the Mapping or Output component.

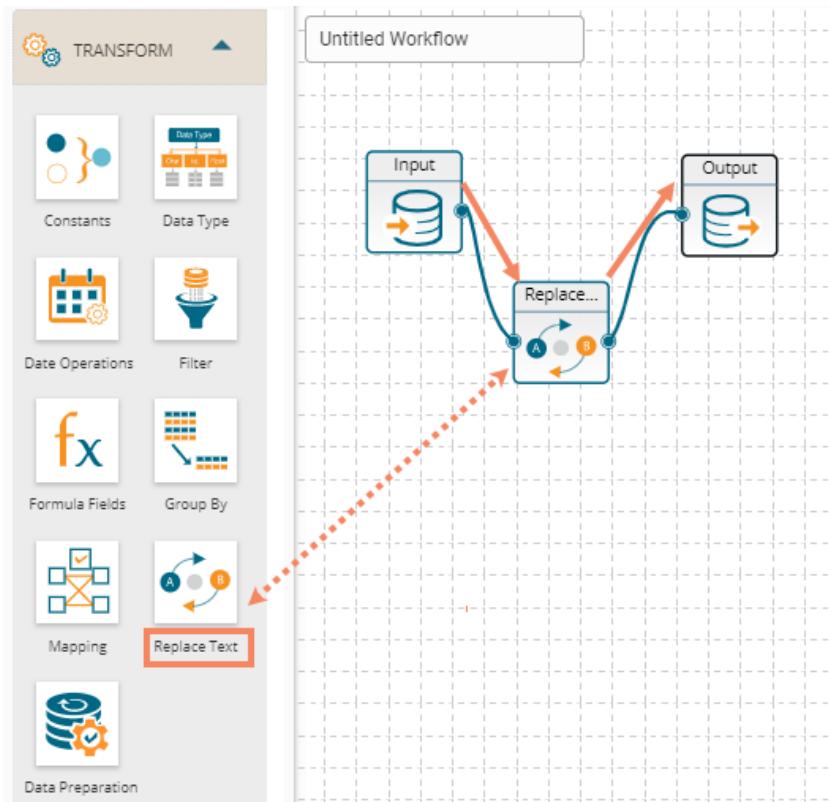

The screenshot shows a 'DATA PREVIEW' table. The columns are 'Candidate ID' and 'Name of Candidates'. The data rows are:

Candidate ID	Name of Candidates
1	Ahsan R
2	Rajive Raveendra Pai
3	Amit Kumar Soni
4	Ritu
5	Vedprakash
6	Shiv Narayan Sahu
7	Animesh Srivastava
8	Vikram Bharti
9	Sudharshan Reddy
10	Ajish.T.Thomas

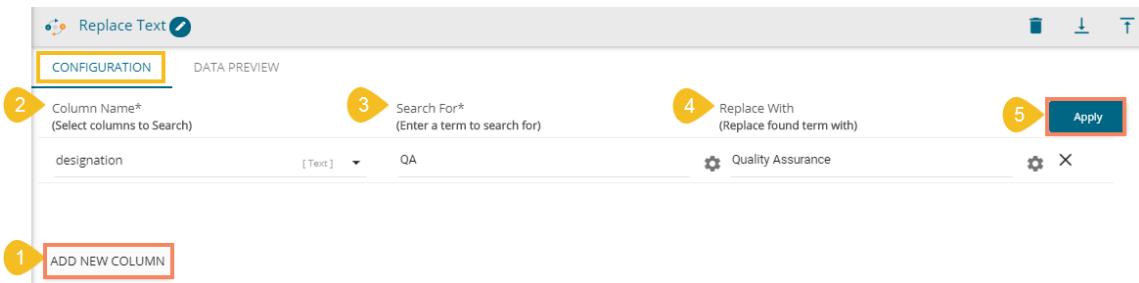

5.8. Replace Text

Users can search by whole word, sensitive to case, search for particular values like NULL or empty strings, or use regular expressions, and then replace with any given constant values or even empty strings. Only text columns can be transformed using this component. Users can replace text for the multiple text columns.

- i) Navigate to the Workflow editor.
- ii) Connect the ‘Replace Text’ component with the configured Input dataset and Output component.

- iii) Configure the ‘Replace Text’ component as described below:
 - a. Click the ‘ADD NEW COLUMN’ option to get the configuration fields.
 - b. Column Name: Select a column from the input data set.
 - c. Search For: Enter a term to search from the selected column.
 - d. Replace With: Enter a term to replace the searched term in the input data.
 - e. Click the ‘Apply’ option.

- iv) Run the workflow.
- v) Save the workflow.
- vi) The notification messages appear to display the update of the data preview process.
- vii) A notification appears to confirm the successful completion of the Data Preview process. All the components in the workflow get green checkmark at the top.
- viii) Open the ‘DATA PREVIEW’ tab from Replace Text or Output to see the replacement of the selected text in the column.

name	gender	source	designation
Ahsan R	Male	Indeed	QE Manager
Rajive Raveendra Pal	Male	Orgspire	QE Architect

Vedprakash	Male	Referral	QE Engineer
Shiv Narayan Sahu	Male	BMS Innolabs	Senior Software Engineer
Animesh Srivastava	Male	Orgspire	AWS Consultant
Vikram Bharti	Male	BMS Innolabs	Senior Software Engineer

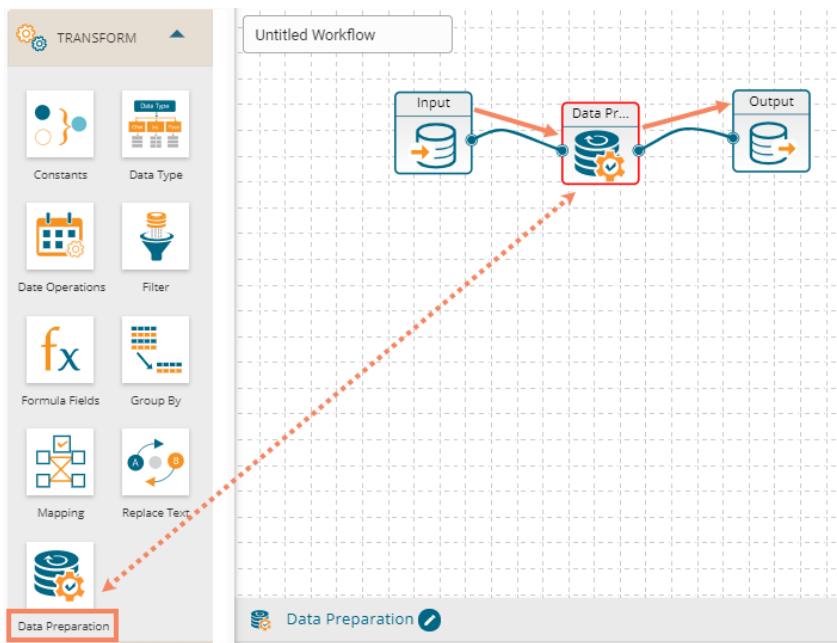

Note:

- The users can click on the '**ADD NEW COLUMN**' option to add multiple columns for any transform component.
- The users can also see data preview of the various transform components by clicking the '**DATA PREVIEW**' tab of the respective options.

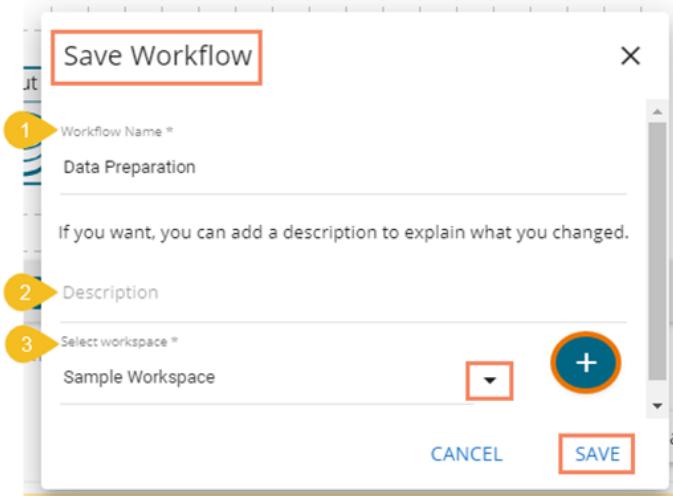

5.9. Data Preparation

The Data Preparation option comes pre-loaded with a series of transforms to be applied to the selected input data set.

- Navigate to the Workflow editor.
- Connect the '**Data Preparation**' component to the configured Input dataset and Output component.
- Click the dragged Data Preparation component.

- The Save Workflow window pops-up.
- Provide the Workflow name and select a workspace to save the workflow.

- vi) After successful execution, the ‘Launch Data Prep’ option gets enabled for the Data Preparation component.

Execute processing finished.

6. Merge

The users can use the '**Merge**' components to combine input data sets and get the required output.

6.1. Append

The '**Append**' feature combines one dataset on top of another. If the datasets are of different structures, still the union is possible, and the output becomes a unified more massive structure with NULL values populated wherever data is missing. Users can choose whether to include only shared columns or all columns to append.

6.1.1. Append All Columns

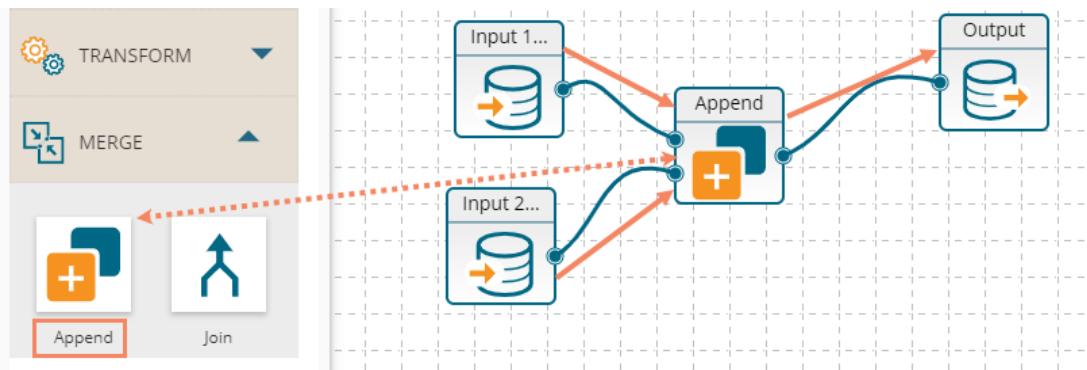

- Navigate to the Workflow editor.
- Configure two input datasets.
- Open the '**SETTINGS**' tab to see the available columns in the respective input dataset.

a. Input 1

Column	Type
actual_joining_date	Text
candidate_id	Whole Number
comments	Text
current_status	Text
designation	Text
expected_joining_date	Date
experience	Decimal

b. Input 2

- iv) Connect the '**Append**' component with the configured Input datasets and an Output component.

- v) Click on the dragged Append component to get the configuration fields.
vi) Select '**INCLUDE ALL COLUMNS**' option using the '**Select Columns**' drop-down menu.

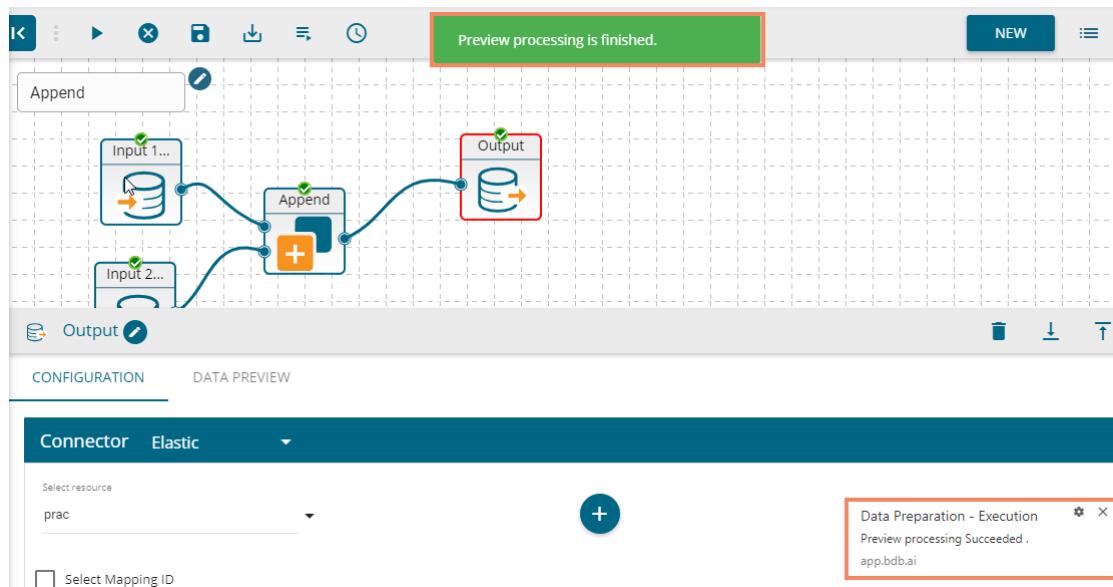

- vii) Click the '**Next**' option.
viii) The columns from both the selected input data sets get displayed.

Output

DATA PREVIEW

name	source	monthly_salary	joining_status
Emp ID 1	internal	87556.33	
Emp ID 2	internal	28155.67	
Emp ID 3	internal	29673.58	
Emp ID 4	internal	63824.17	
Emp ID 5	internal	25603.75	
Emp ID 6	agency	25718.58	
Emp ID 7	portal	56575.33	

- ix) Save the workflow.
- x) Run the workflow.
- xi) The notification messages appear displaying update of the data preview process.
- xii) A notification appears to confirm the successful completion of the Data Preview process. All the components in the workflow get green checkmark at the top.

- xiii) The selected columns of both the input data sets get appended in the '**DATA PREVIEW**' tab of the Append and Output components.

name	source	monthly_salary	joining_status
Emp ID 1	internal	87556.33	
Emp ID 2	internal	28155.67	
Emp ID 3	internal	29673.58

Emp ID 5	internal	25603.75	
Emp ID 6	agency	25718.58	
Emp ID 7	portal	56575.33	

6.1.2. Append Only Shared Columns

- Connect the '**Append**' component to the configured input datasets and an output component (As described in section 6.1.1.).
- Click on the '**Append**' component from the workflow.
- The '**CONFIGURATION**' tab opens.
- Choose '**ONLY INCLUDE SHARED COLUMNS**' as an option to append the datasets.
- Click the '**Next**' option.

Select columns*
(Which columns should be included in this append?)

Review changes
(Review the changes that will be made to each DataSet)

ONLY INCLUDE SHARED COLUM... [Review description]

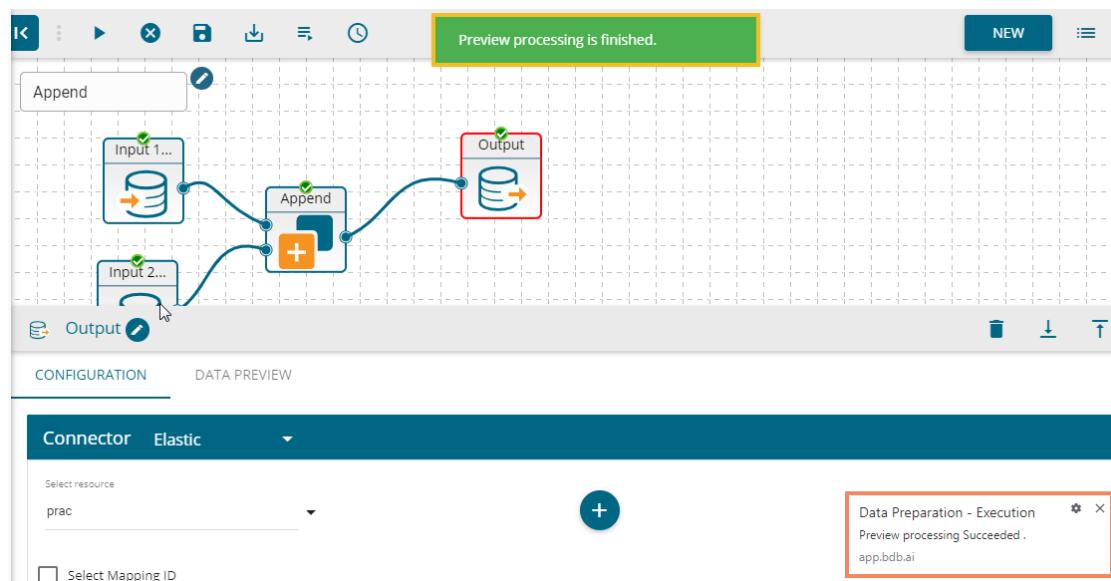

Next

- All the columns from both the input data sets get displayed for the user to select the columns from both the datasets. If the user does not select any column, it automatically takes all the shared columns between both the selected datasets.
- Click the '**Apply**' option to configure the Append component.
- A success message appears if the configuration is successful.

hiring_data_etl_demo (Select column)	ETL_cube (Select column)	Rename column (Set new name)

Item Type	Text
Order Date	Text
Order ID	Decimal
Order Priority	Text

- ii) Drag the 'Join' component to the workspace.
- iii) Connect the 'Join' component to the above-given input datasets and one output component to complete the workflow.

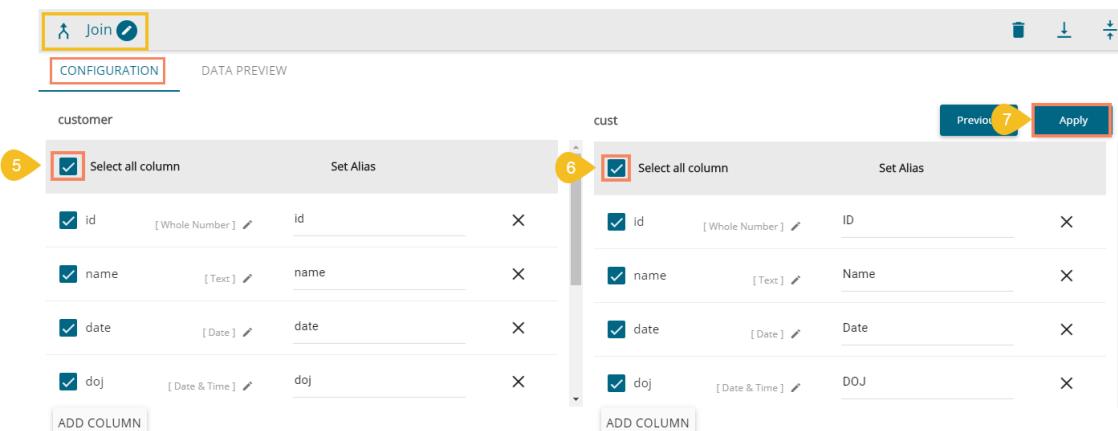

- iv) Configure the 'Join' component as described below:

- Identify Column: Identify a column from the first Input dataset.
- Join Type: Choose a join type to merge the selected datasets out of the given choices
 - Inner
 - Left Outer
 - Right Outer
 - Full Outer
- Matching Column: Select a column from the second Input dataset.
- Click the 'Next' option.

- The next screen appears prompting the user to select columns from both the input datasets. The users can use the '**Select all column**' option to select all the columns. However, they can also deselect any column by removing the checkmark from the box given next to the column name.
- Click the '**Apply**' option to configure the selection of columns.

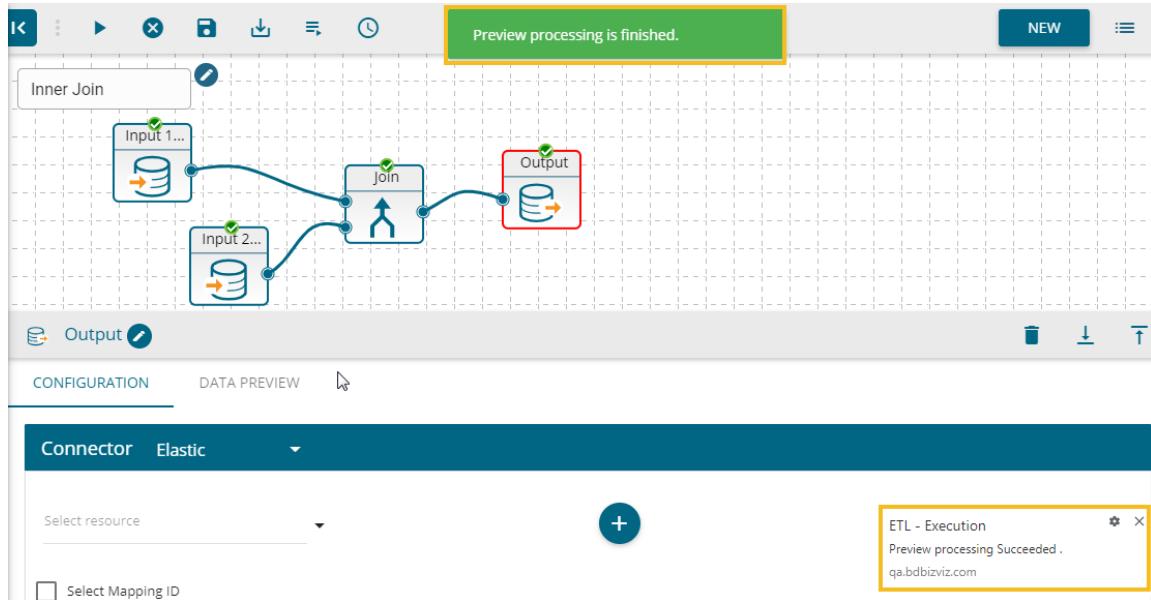

- A notification appears to confirm the status of the configuration process. (Success or error status is communicated through the color-coded pop-up messages.)

Note:

- The '**Inner**' is the default Join Type.
 - Users can apply multiple joins by using the '**ADD COLUMN**' tab.
- v) Save the workflow.

- vi) Run/Execute the workflow for data preview.
 - vii) The notification messages appear to display the update of the data preview process.
 - viii) A notification appears to confirm the successful completion of the Data Preview process. All the components in the workflow get green checkmark at the top.
- Note: The notification message also gets displayed for an error in the data preview process.

- ix) Open the 'DATA PREVIEW' tab using the Join or Output component to see the merged data based on the selected Join type.

The screenshot shows the "DATA PREVIEW" tab for a "Join" component. The table displays the following data:

id	name	date	doj
1	naincy	2019-06-10	2019-06-06T12
2	hai	2019-06-10	2019-06-06T13

6.2.1. Join Types

The 'Join' feature offers four types of join to merge datasets.

The sample data sets used to describe the supported join types are:

1. Input Dataset 1

2. Input Dataset 2

a) Inner Join

- Connect the join component to the configured input datasets and output component to create a workflow.
- Configure the 'Join' component for the 'Inner' join type.

- iii. Save and run the workflow to get data preview of the merged data.
- iv. Click the 'DATA PREVIEW' tab using the Join or Output component to view the merged datasets.
- v. The DATA PREVIEW displays only matching columns.

Join			
CONFIGURATION		DATA PREVIEW	
		id	name
		1	naincy
		2	nai
		date	doj
		2019-06-10	2019-06-06T12
		2019-06-10	2019-06-06T13

b) Left Outer Join

- i. Connect the join component to the configured input datasets and output component to create a workflow.
- ii. Configure the 'Join' component for the 'Left Outer' join type.

ADD COLUMN

- iii. Save and run the workflow to get data preview of the merged data.
- iv. Click the 'DATA PREVIEW' tab using the Join or Output component to view the merged datasets.
- v. The 'DATA PREVIEW' tab displays the complete data from the left input dataset and matching columns from the other input data set.

Join			
CONFIGURATION		DATA PREVIEW	
		id	name
		1	naincy
		6	ranjeet
		5	update
		7	manjhari
		2	nai
		date	doj
		2019-06-10	2019-06-06T12
		2019-06-06	2018-08-20T12
		2019-06-07	2018-07-09T15
		2019-06-08	2018-08-31T16
		2019-06-10	2019-06-06T13

c) Right Outer Join

- Connect the join component to the configured input datasets and output component to create a workflow.
- Configure the 'Join' component for the 'Right Outer' join type.

The screenshot shows the configuration of a 'Join' component. The 'Join Type*' dropdown is set to 'Right Outer'. The 'CONFIGURATION' tab is active. The 'DATA PREVIEW' tab is visible at the top. Below the configuration tabs, there are sections for 'Identifying Column*', 'Join Type*', 'Matching Column*', and 'ADD COLUMN'.

- Save and run the workflow to get data preview of the merged data.
- Click the 'DATA PREVIEW' tab using the Join or Output component to view the merged datasets.
- The 'DATA PREVIEW' tab displays the complete data from the left input dataset and matching columns from the other input data set.

The screenshot shows the 'DATA PREVIEW' tab for the join component. It displays a table with four columns: 'new_column', 'add new1', 'ID', and 'Name'. The 'new_column' column has two rows ('bizviz' and 'bizviz'). The 'add new1' column has multiple rows (1, 2, 16, 121212, 44, 12, 19). The 'ID' and 'Name' columns have corresponding values for each row in the 'add new1' column. This visualizes how the right outer join preserves all rows from the 'bizviz' dataset even if they don't have a match in the 'new_column' dataset.

Note: The output data preview appears aligned with the selected left input dataset.

d) Full Outer

- Connect the join component to the configured input datasets and output component to create a workflow.
- Configure the 'Join' component for the 'Full Outer' join type.

The screenshot shows the configuration interface for a 'Join' component. The 'Configuration' tab is active. In the 'Join Type' section, 'Full Outer' is selected. The 'DATA PREVIEW' tab is visible at the top right.

- iii. Save and run the workflow to get data preview of the merged data.
- iv. Click the 'DATA PREVIEW' tab using the Join or Output component to view the merged datasets.

new_column	add new1	ID	Name
bizviz	121212	1	d
bizviz	121212		
		16	fff
bizviz	121212		
bizviz	121212		
bizviz	121212	2	entry
		1212	ffw223

7. Scheduler

The 'Scheduler' section displays the schedule monitoring details. Users can see a list containing all the scheduled workflows.

- i) Click the 'Navigator' icon.
- ii) Select the 'Scheduler' option from the drop-down menu.
- iii) The 'Schedule Monitoring' page opens.
- iv) The scheduled workflow gets listed on the Schedule Monitoring page.
- v) By clicking a scheduled workflow from the list, the following schedule details appear:
 - a. Scheduler Name
 - b. Last Updated Date
 - c. Recurrence (Date and Time)
 - d. Status

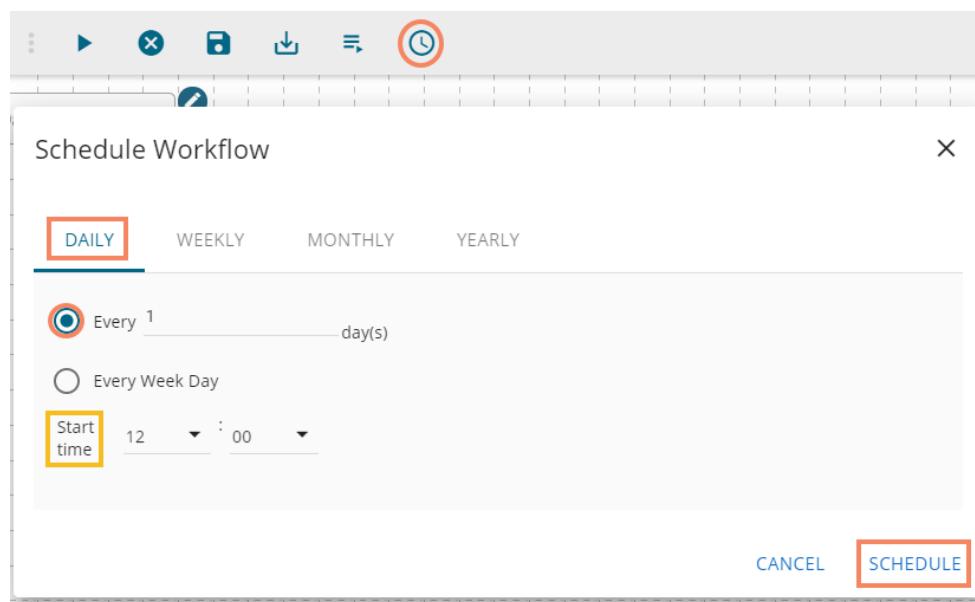

Scheduler Name	Last Updated Date	Recurrence	Status
Incremental_laodtestQA	6/10/2019, 10:58:00 PM	6/11/2019, 10:58:00 PM	Successfully started the scheduled query
Incremental_laodtestQA	6/7/2019, 10:58:00 PM	6/8/2019, 10:58:00 PM	Successfully started the scheduled query
Incremental_laodtestQA	6/6/2019, 10:58:01 PM	6/7/2019, 10:58:00 PM	Successfully started the scheduled query
Incremental_laodtestQA	6/5/2019, 10:58:00 PM	6/6/2019, 10:58:00 PM	Successfully started the scheduled query
Incremental_laodtestQA	6/4/2019, 10:58:01 PM	6/5/2019, 10:58:00 PM	Successfully started the scheduled query
Incremental_laodtestQA	6/3/2019, 10:58:00 PM	6/4/2019, 10:58:00 PM	Successfully started the scheduled query

7.1. Schedule Configuration Options

These options are provided to configure a range of time for a scheduled workflow. The user can select only one option at a time from the given menu.

1. Daily: User can schedule the job daily by using this option.

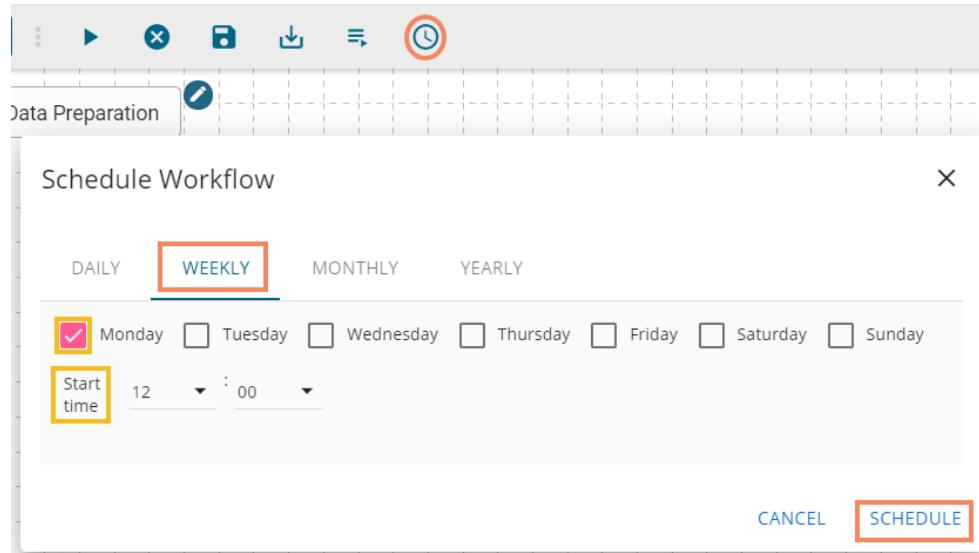

- Click the 'Scheduler' icon on the workflow editor.
- Choose the 'DAILY' option from the 'Schedule Workflow' window (It is a default option).
 - Select an option out of the given choices
 - Every __ day(s)
 - Every Weekday
 - Set the start time using the drop-down
 - Click the 'SCHEDULE' option.

2. Weekly: The user can schedule the job weekly by using this option.

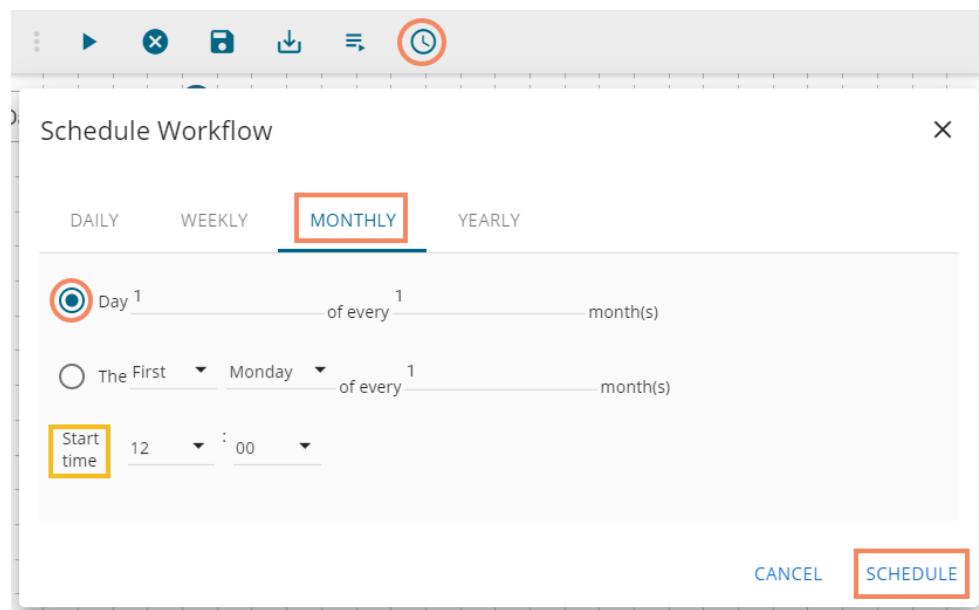

- Click the 'Scheduler' icon on the workflow editor.

- b. Choose the '**WEEKLY**' option from the '**Schedule Workflow**' window.
 - i. Select an option out of the given choices.
 1. Choose the days of the week by check marking in the box.
 2. Set the start time using the drop-down.
 - c. Click the '**SCHEDULE**' option.

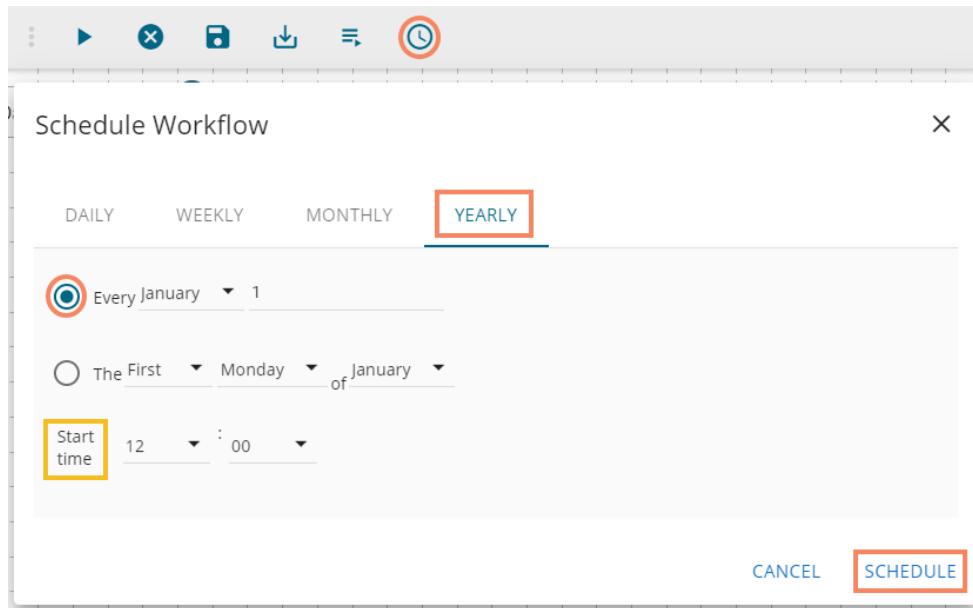

3. **Monthly:** User can schedule the job monthly by using this option.

- a. Click the '**Scheduler**' icon on the workflow editor.
- b. Choose the '**MONTHLY**' option from the '**Schedule Workflow**' window.
 - i. Select an option out of the given choices to choose a day for each month.
 - ii. Set the start time using the drop-down menu.
 - c. Click the '**SCHEDULE**' option.

4. **Yearly:** User can schedule the job yearly by using this option.

- a. Click the '**Scheduler**'  icon on the workflow editor
- b. Choose the '**YEARLY**' option from the '**Schedule Workflow**' window.
 - i. Select an option out of the given choices
 1. Specify either a day or date of a specific month in a year
 2. Set the start time using the drop-down
- c. Click the '**SCHEDULE**' option.

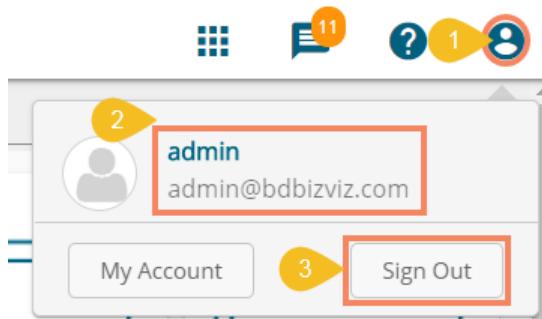

8. Signing Out

It is possible for a user to log out from the BDB ETL plugin at any given stage. Users need to click on the '**Close**'  option to close the ETL page.

The following steps describe how to log out from the BDB Platform.

- i) Click the '**User**' icon  on the Platform homepage.

- ii) The details of the logged in user appears.
- iii) Click the 'Sign Out' option.

- iv) The user successfully signs off from the **BDB Platform**.

Note: By clicking the 'Sign Out' option, the user gets back to the Sign in page of the BDB platform.
