1.2. Overview

This guide covers:

- Explanation and usage of all the menu options
- Connecting to data and creation of dashboards
- Explanation and usage of the dashboard components
- Publishing and sharing of dashboards

1.3. Target Audience

This guide is aimed at users who wish to create and export interactive dashboards by connecting to a wide range of data sources.

1.4. Supported Web Browsers

The BDB Platform is a web browser-based application. The users can run the BDB Platform and its various plugins on the below given versions of the browsers:

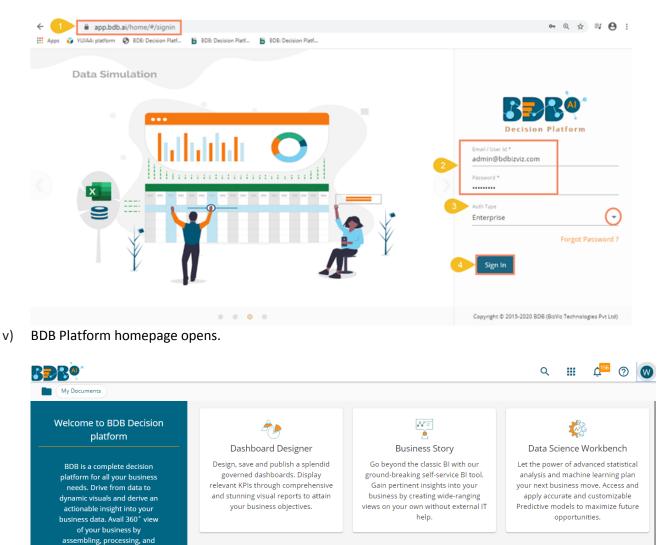

| Mozilla Firefox/ Firefox ESR | Latest Version |
|------------------------------|--|
| Microsoft Edge | Latest Version |
| Apple Safari | 10 |
| Google Chrome | Latest Version (recommended web browser) |

2. Getting Started with BDB Dashboard Designer

This section covers the initial steps to access the BDB Dashboard Designer plugin using the BDB Platform.

- i) Open the BDB Enterprise Platform Link: https://app.bdb.ai
- ii) Enter your credentials to log in to the platform.
- iii) Select an Auth Type from the drop-down list.
- iv) Click the 'Sign In' option.

vii) Select the 'Designer' plugin from the app menu.

viii) A new window opens displaying the Designer homepage.

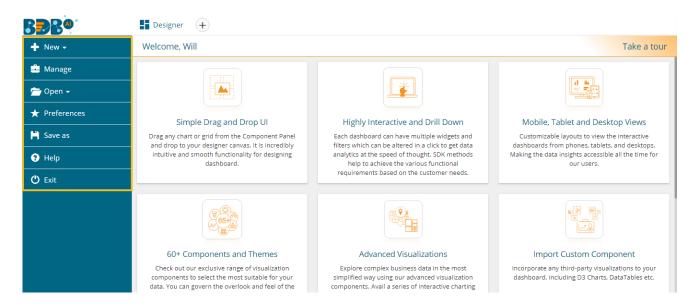

- ix) Click the 'Take a tour' option.
- x) A new window appears initiating the landing page tour.
- xi) Click the 'Next' option to move ahead in the guided tour.

3. Dashboard Designer Homepage

The Designer homepage displays a list of tasks in the left panel that users can perform on a dashboard. The users can add a new Dashboard/Workspace, Manage the existing Dashboard(s)/Workspace(s), set preferences for a dashboard, save the dashboard with a different name or open it from the local disk if saved there and exit the Designer plugin all through this panel.

3.1. New

This option directs users to create a new workspace or dashboard.

- i) Navigate to the Designer homepage.
- ii) Click the 'New' drop-down menu.
- iii) The user gets two options:
 - a. **Workspace**: Clicking this option redirect the users to create a new workspace/place holder for the dashboard.
 - b. **Dashboard**: By clicking this option, the users get redirected to the Designer Canvass to create a new dashboard.

3.2. Manage

- i) Navigate to the Designer homepage.
- ii) Click the 'Manage' option.

| 🕂 New - |
|---------------|
| 🚔 Manage |
| 🗁 Open 🗸 |
| ★ Preferences |
| 💾 Save as |
| ? Help |
| 🖒 Exit |

- iii) The user gets directed to manage the following tasks for a Workspace or Dashboard:
 - a. Tasks for a Workspace
 - i. Search in Workspaces: Searches for a specific Workspace
 - ii. Reload Workspaces: Reloads all the Workspaces
 - iii. New Workspace: Adds a new Workspace
 - iv. Rename: Renames the selected workspace
 - v. Remove: Removes the selected workspace from the list and moves to the 'Trash' Workspace
 - vi. Empty the Trash: Removes all the workspaces from the Trash workspace

| + New - | Workspaces (2) | 3⊕2C1Q |

Or

The user gets directed to the BizViz Platform homepage.

Note: The user can also click the **'Close'** button (the 'X' on the right edge) of the Dashboard Designer tab to leave/close the designer tab.

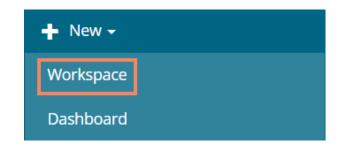

The user gets directed to the BDB Platform home page after closing the designer application.

4. Workspace

4.1. Creating a Workspace

A Workspace is the place holder where users can save multiple dashboards.

- i) Navigate to the Dashboard Designer homepage.
- ii) Click 'New' or Click the 'Add' option 📑
- iii) Click 'Workspace' from the context menu.

iv) A dialog box appears.

- a. Workspace Name: Enter a title for the Workspace in the given field.
- b. Click the 'Save' option.

| , a New work | space | | × |
|------------------------|------------------|--------|--------|
| 1 Name | Sample Workspace | | |
| Constructed for Market | | 2 Save | Cancel |

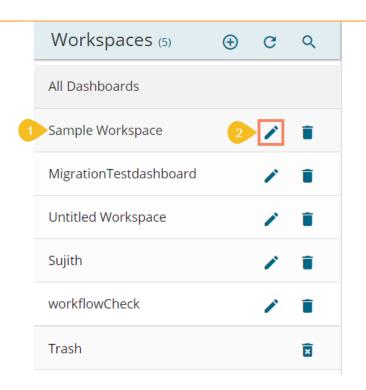

v) The newly created workspace gets saved under the list of the existing **Workspaces**.

| ╋ New - | Workspaces (5) | Ð | G | Q |

| | C Exit | | | · | - | | |
| | 2 | Trash | | | × | | |

d. Click the '**Remove Permanently**' icon from the Trash workspace to delete a workspace or dashboard permanently.

5. Designer Canvas

Dashboard Designer space can be understood as a folder that contains Data Source connections, Components, Dashboard Objects, Component Attributes.

Click the '**New**' drop-down icon on the homepage and select the '**Dashboard**' option to access the Designer space/Canvas.

A wide range of charting components, filters, and Grid components are available on the Designer space to create a dashboard.

Refer to the following image to understand the various components provided on the Designer Canvas:

- **1. Tab:** Place where dashboard design takes place. Drag and drop charts and components here to create dashboards.
- 2. Mobile 2: Displays Dashboard screen like a Mobile device
- 3. Tablet 🛄: Displays Dashboard screen like Tablet
- **4.** Large Screen **—**: Displays Dashboard screen like Desktop
- 5. Save to Local Disk 🚬 Saves the created dashboards to your local disk.
- 6. Save to Another Workspace (Save As) : Saves a copy of the original dashboard to another workspace or the same workspace.
- **7.** Save (Dashboard) **I** : Saves the created dashboards in a workspace.

Copyright © 2015-20 BDB

- **8. Preview L**: Displays the preview mode of the dashboard.
- **9.** Full Screen **5**: Maximizes the dashboard for a better view.
- **10.** Data Connectors E: Connects to a wide range of data sources.
- **11.** Component Library \square : Includes a compelling range of charts, filters, and data grids.
- **12.** Manage Dashboard Components : Option used to lock, hide, and order layout of the components on the dashboard.
- **13.** Component Variables and Script ²: Option used to define component scripts.
- **14.** Guided Tour **2**: Begins the guided tour for the Designer canvas.

| BBB®® | A Home Untitled x + | | - |

| | | 10 | |
| | | •••••••••••••••••••••••••••••••••••••• | • |
| | | 12 1 | E |
| | | 13-13 | 2 |
| | | 14 | Q |

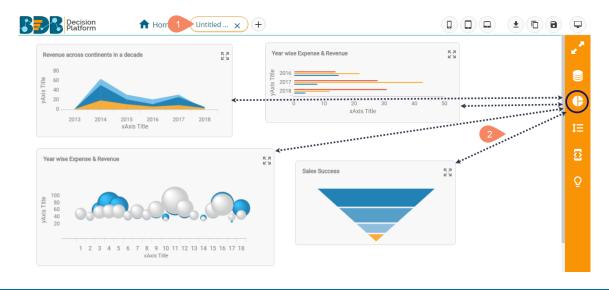

Note:

- a. Users will be redirected to the Designer homepage by clicking the '**Home**' ¹ option.
- b. Use the 'Save As' option to save a dashboard in the same workspace with a different name. The user can save the dashboard in a different workspace.

5.1. Component Group

Users can create component groups and manage the created groups by using the 'Manage Group' option from the Designer Canvas.

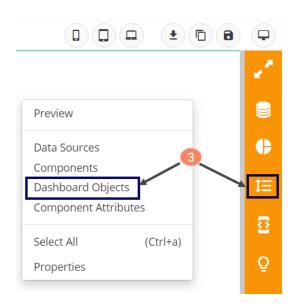

- i) Navigate to the Designer Canvas.
- ii) Select and drag multiple components to the canvas using the 'Component Library' icon.

iii) Use the right click on the canvas to access the 'Dashboard Objects' option.

or Click the **'Manage Dashboard Components' i**con from the canvas menu bar.

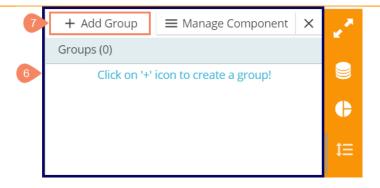

- iv) A new panel opens with the dragged components' names.
- v) Select the 'Manage Group' vicon from the panel.

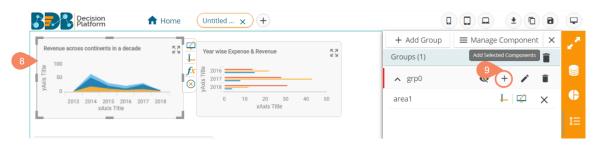

| | | | | ± | | 8 | Ţ |
|---|---|---|------|----------|-------|---|----|
| 4 | Search | 5 | 🔶 Ma | anage (| Group | × | ,* |
| | Objects (4) | | Ø | Ô | Î | Ū | |
| | $\equiv \frac{area1}{area1}$ | | | | Î | þ | |
| | $\equiv \frac{bar2}{bar2}$ | | | | Î | þ | • |

| | $\equiv {{{\rm funnel4}}\over{{_{{\rm funnel4}}}}}$ | | | | Î | Ū | 2 |
| | | | | | | | Ŷ |

- vi) A new window will pop-up to add the group.
- vii) Click the 'Add Group' option to add a new group.

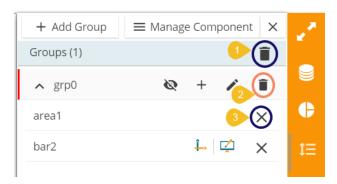

- viii) Select the dragged component that you wish to add to the created group.
- ix) Click the 'Add Selected Component' + icon to add the selected components to the newly created group.

- x) Deleting Group or Component: There are 3 options provided to delete either Group or component.
 - a. Click the 'Remove All' icon (marked as number 1) to delete all the created/added groups.
 - b. Click the '**Delete Group'** icon(marked as number 2) provided next to the group name to delete the group.
 - c. Click the '**Delete from Group**' icon (marked as number 3) provided next to the component to remove the component from the group.

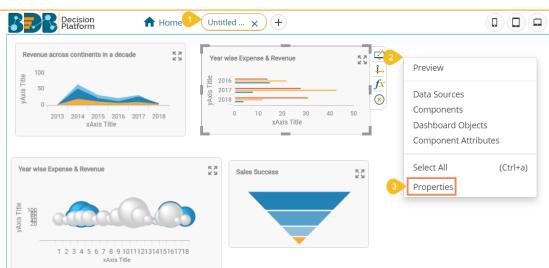

5.2. Canvas Properties

The Designer canvass is provided with specific properties.

- i) Navigate to the Designer canvas.
- ii) Use the Right-click anywhere on the canvas.
- iii) Select the '**Properties**' option from the context menu.

iv) The following Canvas properties will be displayed:

| Dashboard | × | | |

5.3. Context Menu Properties

This section describes properties applied to multiple components when dragged into the designer canvass and selected.

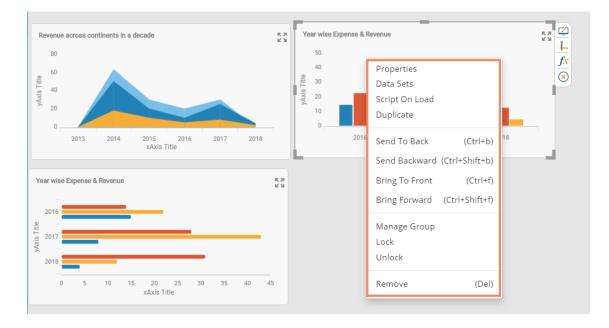

Steps to Access the Context Menu Properties:

- i) Drag multiple components into the designer canvas (At least three components to avail all the properties).
- ii) Select multiple components from the canvas. (At least three)
- iii) Use right-click to open the context menu.
- iv) The following properties will be listed in the context menu:
 - a. Align Left: All the selected components get aligned to the left.
 - b. Align Right: All the selected components get aligned to the right.
 - c. Align Top: All the selected components get aligned to the top.
 - d. Align Bottom: All the selected components get aligned to the bottom.
 - e. Align Horizontal: All the selected components get aligned horizontally.
 - f. Align Vertical: All the selected components get aligned vertically.
 - g. Equal Space (Horizontal): All the selected components get equal space horizontally.
 - h. Equal Space (Vertical): All the selected components get equal space vertically.
 - i. Equal Height: All the selected components get an equal height.
 - j. Equal Width: All the selected components get an equal width.
 - k. Manage Group: The user gets redirected to manage the group.
 - I. Lock Selected: All the selected components get locked.
 - m. Unlock Selected: All the selected components get unlocked.
 - n. Delete Selected: To delete the selected components.

Note: Each dragged component is provided with a context menu containing a list of options as shown in the below image:

6. Connecting to a Data Source

This section explains a step-by-step process to create a connection by using the available data connectors.

- i) Click the '**Data Connectors**' e icon using the Designer canvas.
- ii) A new screen opens, displaying the following data connection options:
 - a. CSV
 - b. Excel
 - c. Web Service
 - d. Predictive Service
 - e. Data Store
 - f. Websocket
 - g. Merged Data

| BBB® | A | Home Untitled x + | | |
|----------------------|----------|---------------------------|-----|---|
| 2 CSV | + | | | × |
| Excel | + | | | • |
| Data Service | + | | | |
| Data Science Service | + | | | |
| Data Store | + | Please create a connectio | | |
| Data Sheet | + | Please create a connectio | 11: | |
| Web Socket | + | | | |
| Merged Data | + | | | |

- iii) Select a data connection type and click the 'Create New Connection' icon.
- iv) A new connection appears below.
- v) Configure the required details to create a data connection.

| | CSV 3 | + | Name | Connection-1 | i x | e. |
|---|----------------------|---|------------------------|----------------------|----------|----|
| 4 | Connection-1 | 5 | Browse | Browse a CSV file | <u>±</u> | |
| | Excel | + | Load at Start | Yes No | | • |
| | Data Service | + | FIELD SET CALCULAT | TED FIELDS CONDITION | | t≡ |
| | Data Science Service | + | | | | 2 |
| | Data Store | + | Fields not available ! | | | Q |

6.1. Connecting to a CSV File

Click the **'Data source'** icon provided to the right side of the canvas, and view the database connectivity options.

- i) Click the 'Data Connectors' icon 📴 to display all the available data connector types.
- ii) Click the 'Create New Connection' icon + provided next to the 'CSV' option.
- iii) A new connection gets added under the CSV connection type.
- iv) Click the connection to display the connection-specific details.

| CSV | 2+ | Name | Connection-1 | () × 🛃 |
|------------------|----------|---------------|-----------------------------|------------|
| 3 Connection-1 | c_1] 🖸 🚺 | Browse | Browse a CSV file | ₽ 0 |
| Excel | + | Load at Start | Yes No | ¢ |
| Data Service | + | FIELD SET | CALCULATED FIELDS CONDITION | t≡ |
| Data Science Ser | vice + | | | 8 |
| Data Store | + | Fields not av | ailable ! | Q |

- v) Configure the following information:
 - a. Name: Name the connection.
 - b. **Browse:** Click the '**Browse**' icon **1** to browse a CSV file.
 - c. Load at Start: Enable this option to get the updated data from the data source before loading it into charts.

vi) The '**FIELDSET**' tab displays all the fields after establishing the data connection.

| | | × |
|---------------|-----------------------------|-------------------|
| Name | Connection-1 | Browse a CSV file |
| Browse | DD Model Data(CSV).csv | ± |
| Load At Start | Yes No | |
| FIELD SET | CALCULATED FIELDS CONDITION | |
| Employee | | |
| Fri | | |
| Mon | | |
| Thu | | |

6.1.1. Condition

- i) Select the 'CONDITION' tab.
- ii) Provide a condition to be applied as a filter on the selected data by putting a checkmark in the given box.

E.g., As displayed in the following image, '**BU 6**' has been selected from the '**team**' field. Hence, only data related to the team BU 6 will be pulled from the data source.

| FIELD SET CALCULATED FIELDS | CONDITION | | |
|-----------------------------|------------|---------|--|
| Fields | Conditions | Actions | |
| Hame | | | |
| offered_ctc | | • | |
| previous_ctc | | • | |
| previous_organisation | | • | |
| referral_of | | • | |
| skills | | • | |
| source | | ▼ □ | |
| team | BU 6 | ▼ 🔽 | |
| usd_billing | | ▼ | |

6.1.2. Calculated Field

The users can add a calculated field by using this tab.

- i) Navigate to the Data Connectors page
- ii) Create a connection by selecting a specific Data Connector type
- iii) Connect to the desired data source to access the available fields
- iv) Click the 'CALCULATED FIELDS' tab
- v) The Calculated Field Editor dialog box opens:
 - a. Name: Provide a name for the calculated field
 - b. Script Editor: Use the Script Editor space to insert the desired calculation formula using the rule given below.
 - i. Enclose field names in square brackets: [total_sales]/[number_of_items]

- ii. Enclose global variable in curly braces: {bar1.profit}*2+[profit_jan]
- c. Click the '**Create**' option to create the calculated field

| | Calculated Fie | ld Editor | × |
|---|----------------|--|------|
| 1 | Name | CalcField1 | |
| 2 | Script Editor | {column2.sales}/2 | |
| | | | |
| | Ö | | 11 |
| c | | nes in square brackets: [total_sales]/[number_of_items] iriable in curly braces: {bar1.profit}*2+[profit_jan] | |
| | | 3 Create Car | ncel |

vi) The newly created calculated field gets added under the 'CALCULATED FIELDS' tab.

| FIELD SET | CALCULATED FIELDS | CONDITION | | |
|--------------|-------------------|-----------|---|---|
| Calculated f | ields | | | + |
| CalcField1 | 1 | | ľ | Î |

6.1.3. Script on Load for a Data Connection

The users can apply their modifications or preferences at the connection level using the Scripting window to get the modified data.

- i) Navigate to the Data Connectors page.
- ii) Select a Data Connector type.
- iii) Create a new Connection and configure it.
- iv) Select the 'Script on Load' $\overline{\Box}$ icon provided next to the connection.

| CSV Script Or | Load | Name | Connection-1 | í) × | 2 |
|--------------------|------|------------------------|-------------------------|------|----|
| Connection-1 | Î | Browse | Browse a CSV file | t | |
| Excel | + | Load At Start | Yes No | | ¢ |
| Data Service | + | FIELD SET CALC | ULATED FIELDS CONDITION | | t≡ |
| Predictive Service | + | | | | Ð |
| Data Store | + | Fields not available ! | | | Q |

v) The Script tab appears to trigger a script to produce some action on the data connection.

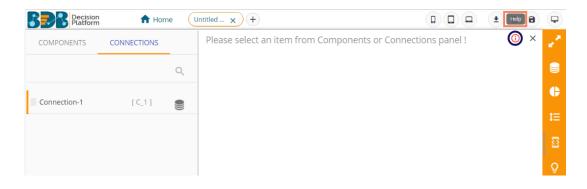

| COMPONENTS | CONNECTIONS | | Script | × | 2 |
|--------------|-------------|---|--|-------|----|
| | | Q | 1 | | |
| Connection-1 | [C_1] | • | | | ¢ |
| | L J | | | | t≡ |
| | | | | | 8 |
| | | | | | Q |
| | | | | | |
| | | | | | |
| | | | Connection-1 Use Ctrl+Space for assistance or visit help section for SDK method de | tails | |

vi) The user can also use a script for the Dashboard, which can be accessed via the '**COMPONENTS**' tab.

| COMPONENTS | CONNECTIONS | Script ① × | < | 2.8 |
|------------|-------------|--|---|-----|
| | Q | 1 | | 9 |
| Dashboard | ý | | | ¢ |
| | | | | t≡ |
| | | | | 8 |
| | | | | Q |
| | | | | |
| | | | | |
| | | Dashboard Use Ctrl+Space for assistance or visit help section for SDK method details | | |

Note:

a. Click the '**Help**' icon from the Script on the Load page.

b. The Scripting Help tab opens with some predefined scripts.

| 🖞 8D8: Decision Platform X 🔓 Dashbard Designer X 🗅 BitViz Dashboard Designer SDK 🗙 🕂 | |

6.2. Connecting to an Excel File

- ii) Click the 'Create New Connection' icon + provided next to the 'Excel' option.
- iii) A new connection gets added under the Excel connection type.
- iv) The connection-specific details get displayed on the right side of the page.

| CSV | + | Name | Connection-1 | () × |
|----------------------|---|---------------|----------------------------|------|
| Excel 2 | + | Browse | Browse an excel file | |
| Connection-1 | 3 | Sheet Name | | C |
| Data Service | 4 | Load At Start | Yes No | t≡ |
| Data Science Service | + | FIELD SET C | ALCULATED FIELDS CONDITION | 3 |
| Data Store | + | | | Q |

- v) Configure the following information:
 - a. Name: Name the connection.
 - b. **Browse:** Click the '**Browse**' icon ¹ to browse an Excel file.
 - c. Sheet Name: Select a specific sheet using the drop-down menu.
 - d. Load at Start: Enable this option to get the updated data from the data source before loading it into charts.
- vi) The 'FIELD SET' tab displays all the fields after establishing the data connection.

| 1 Name | Connection-1 | × |
|---------------|-----------------------------|-----|
| Browse | DD Model Data.xlsx | 2 1 |
| Sheet Name | Column | 3-0 |
| Load At Start | 4 Yes No | |
| 5 FIELD SET | CALCULATED FIELDS CONDITION | |
| Expense | | |
| Revenue | | |
| Year | | |

vii) Select the '**Condition**' tab and provide a condition to be applied as a filter on the selected data by putting checkmarks in the given boxes.

E.g., As displayed in the following image, '**2012**' has been selected from the '**Year**' field. Hence, only data related to the year 2012 will be pulled from the data source.

| FIELD SET | CALCULATED FIELDS | | |
|-----------|-------------------|---|---------|
| Fields | Conditions | | Actions |
| Expense | | • | |
| Revenue | | • | |
| Year | 2012 | • | |

viii) Select the 'Script on Load' $\stackrel{\Box}{\cong}$ icon to trigger a script to produce some action on the connection.

6.3. Connecting to a Data Service

- i) Click the '**Data Connectors**' icon is to display all the available data sources.
- ii) Click the 'Create New Connection' + icon provided next to the 'Data Service' connector.

iii) A new connection gets added under the Data Service connector type.

| Data Service | + |
|----------------------|---|
| Connection-1 [C_1] | 2 |
| Data Science Service | + |

- iv) The configurable connection-specific fields display on the right side of the page as explained below:
 - a. Name: Name the connection.
 - b. Data Connectors: Select a data source from the drop-down menu.
 - c. **Data Services:** Select a data service from the drop-down menu.
 - d. **Load at Start:** Enable this option to get up-to-date data / pull the updated data from the data source before loading it into charts.
 - e. Timely Refresh: Enable this option to get the refreshed data.
 - f. **Refresh Interval:** Set the time for refresh interval. (This field appears when the 'Timely Refresh' the field has been enabled.)
- v) The 'FIELD SET' tab displays all the fields after establishing the data connection.

| 1 Name | Connection-1 | i x |
|-------------------------|-------------------|-----------|
| 2 Data Connectors | BDB_hiring | G |
| 3 Data Services | test04_hiringdata | G 🛓 |
| 4 Load at Start | Yes No | |
| 5 Timely Refresh | Yes No | |
| 6 Refresh Interval | 5 | Minute(s) |
| FIELD SET CALCULATED FI | elds condition | |
| bill_start_date | | |
| candidate_id | | |
| comments | | |

Note:

- a. Click the 'Reload Data Sources' icon to reload the existing data connectors.
- b. Click the 'Refresh Service' icon to refresh all the available data services.
- c. The users can filter the targeted data set using the 'CONDITION' option.

6.4. Connecting to a Data Science Service

- i) Navigate to the Data Connector page by clicking the 'Data Connectors' icon 🥪.
- ii) Click the 'Create New Connection' + icon provided next to the 'Data Science Service' connector.
- iii) A new connection gets created under the Data Science Service connector type.

| CSV | + |
|-------------------------|---|
| Excel | + |
| Data Service | + |
| Data Science Service | + |
| Connection-1 [C_1] | 8 |
| Data Store | + |
| Data Sheet | + |

- iv) The configurable connection-specific fields display on the right side of the page as explained below:
 - a. Name: Name the connection.
 - b. Data Science Workflows: Select a deployed Data Science Workflow from the drop-down menu.
 - c. **Load at Start:** Enable this option to get up-to-date data / pull the updated data from the data source before loading it into charts.
 - d. Timely Refresh: Enable this option to get the refreshed data.
 - e. **Refresh Interval:** Set the time for refresh interval. (This field appears when the '**Timely Refreshed**' field has been enabled.)
- v) The 'FIELD SET' tab displays all the fields after establishing the data connection.

| 1 Name | Connection-1 | (i) X |
|--------------------------|----------------|-----------|
| 2 Data Science Workflows | Basic workflow | G |
| 3 Load at Start | Yes No | |
| 4 Timely Refresh | Yes No | |
| 5 Refresh Interval | 5 | Minute(s) |
| FIELD SET CALCULATED FI | ELDS CONDITION | |

| lat | | |
| lon | | |
| PredictedValues1 | | |

Note:

- a. Click the 'Refresh Workflows' icon to refresh the Data Science Workflows.
- b. The users can filter the targeted data set using the 'CONDITION' option.

6.5. Connecting to a Data Store

- i) Click the '**Data Connectors**' icon 🔤 to display all the available data sources.
- ii) Click the **'Create New Connection**' + icon provided next to the **'Data Store'** connector.
- iii) A new connection gets created under the Data Store connector type.

| Data Store | (+) |
|-------------------------|-----|
| Connection-1 [C_1] | Î |
| Data Sheet | + |

- iv) The configurable connection-specific fields display on the right side of the page as explained below:
 - a. Name: Provide a name for the connection.
 - b. Data Store: Select a datastore from the drop-down menu.
 - c. **Load at Start:** Enable this option to get up-to-date data / pull the updated data from the data source before loading it into charts.
 - d. Timely Refresh: Enable this option to get the refreshed data.
 - e. **Refresh Interval:** Set the time for refresh interval. (This field will appear only when the '**Timely Refreshed**' field has been enabled.)
- v) The 'FIELD SET' tab displays all the fields after establishing the data connection.

| 1 Name | Connection-1 | () × |
|--------------------|-----------------------------|-----------|
| 2 Data Store | BatchDemo | G . |
| 3 Load at Start | Yes No | |
| 4 Timely Refresh | Yes No | |
| 5 Refresh Interval | 5 | Minute(s) |
| FIELD SET | CALCULATED FIELDS CONDITION | |
| monthly_sala | ary | |
| skills | | |
| source | | |

Note:

- a. Click the 'Refresh Data Stores' icon to refresh the selected Data Store data connection.
- b. The users can filter the targeted data set using the '**CONDITION**' option.

6.6. Connecting to a Data Sheet

- i) Click the '**Data Connectors**' icon 📃 to display all the available data sources.
- ii) Click the **'Create New Connection'** + icon provided next to the **'Data Sheet'** connector.
- iii) A new connection gets created under the Data Store connector type.

| Data Store | + |
|--------------------|---------------|
| Data Sheet | (+ |
| Connection-1 [C_1] | 2 🗎 |
| Web Socket | + |

- iv) The configurable connection-specific fields display on the right side of the page as explained below:
 - a. Name: Provide a name for the connection.
 - b. Data Sheet: Select a Data Sheet from the drop-down menu.
 - c. **Load at Start:** Enable this option to get up-to-date data / pull the updated data from the data source before loading it into charts.
 - d. **Timely Refresh:** Enable this option to get the refreshed data.
 - e. **Refresh Interval:** Set the time for refresh interval. (This field will appear only when the '**Timely Refreshed**' field has been enabled.)
- v) The 'FIELD SET' tab displays all the fields after establishing the data connection.

| Name | Connection-1 | () × 🖌 | |
|--------------------|-----------------------------|--------|--|
| 2 Data Sheet | Sample Data Sheet | Ç | |
| 3 Load at Start | Yes No | • | |
| 4 Timely Refresh | Yes No | t | |
| 5 Refresh Interval | 5 Minute(s) | 2 | |
| FIELD SET | CALCULATED FIELDS CONDITION | ç | |
| America | | | |
| Asia | | | |
| Europe | | | |
| Year | | | |

6.7. Connecting to a Websocket

- i) Click the 'Data Connectors' 📃 icon.
- ii) Click the '**Create New Connection**' ⁺ icon provided next to the '**Websocket**' connector.
- iii) A new connection gets created under the Web Socket connector type.

| Data Sheet | + |
|--------------------|---------------|
| Web Socket | () |
| Connection-1 [C_1] | 2 |
| Merged Data | + |

- iv) The configurable connection-specific fields display on the right side of the page as explained below:
 - a. Name: Provide a name for the connection
 - b. URL: Enter a URL link
 - c. **Load at Start**: Enable this option to get up-to-date data / pull the updated data from the data source before loading it into charts.

| CSV | + | Name | Connection-1 | í | × |
|----------------------|---|---------------|----------------------|---|---|
| Excel | + | URL | wss:// /websocket/ws | | |
| Data Service | + | Load at Start | Yes No | | |
| Data Science Service | + | | | | |
| Data Store | + | | | | |
| Data Sheet | + | | | | |
| Web Socket | + | | | | |
| Connection-1 | Î | | | | |
| Merged Data | + | | | | |

v) The websocket connection gets established.

6.8. Connecting to a Merged Data

- i) Click the 'Data Connectors' 📃 icon
- ii) Create new connections using any data connector option (In this case, Excel connections are created. E.g., Connection-1, Connection-2)
- iii) Create a connection under the 'Merged Data' connector. (E.g., Connection-3)
- iv) Configure the new connection created for Merged data by mapping the created Excel connections.
- v) Define a condition via the drop-down menu in the Criteria space. (E.g. 'Equal' or 'Not Equal')
- vi) Click the 'Create Criteria' icon.
- vii) The Merged Fields displays all the data fields from the merged connections.

| CSV | + | Name | Connection-3 | | | (j) ; | × |
|----------------------|----|-----------------------|--------------|-----------------|-------------------|-------|----|
| Excel | + | Connection-1 | | Connection-2 | | - 1 | |
| Connection-1 [C_1] | Î | Asia | 5 Equal | Expense | ⊙ € | × | |
| Connection-2 [C_2] | Î | Connection-1 | O | 7 MERGED FIELDS | CALCULATED FIELDS | | |
| Data Service | +/ | Asia Europe | | Asia | | × | i. |
| Data Science Service | 4 | North America Year | | Europe | | × | |
| Data Store | + | | | North America | | × | |
| Data Sheet | + | Connection-2 | C | Year | | × | |
| Web Socket | + | Expense Revenue | | Expense | | × | |
| Merged Data | + | Year | | Revenue | | × | |
| Connection-3 [C_3] | 2 | | | | | | |

Note:

- a. The users can remove the fields added to the merged data connection using the '**Remove**' \times icon.
- b. After clicking the 'Create Criteria' icon, the created criteria gets added to space.

| Name | Connection-3 | () |
|-----------------------|--------------|----|
| C_1.Asia==C_2.Expense | | + |

- c. Trigger a script to produce some action on the connection part using the 'Script on Load' $\stackrel{\Box}{=}$ icon.
- d. Select the CALCULATED FIELDS tab to access Calculated Field Editor and add the calculated fields.
 - 1. Click the 'CALCULATED FIELDS' tab.

2. Click the 'Add' icon.

- 3. The Calculated Field Editor window opens.
 - a. Provide a title for the calculated field
 - b. Insert calculation formula inside the Script Editor space.
 - c. Click the 'Create' option.

| | Calculated Fiel | d Editor | × |
|----|-----------------|--|-----|
| -1 | Name | CalcField1 | |
| | Script Editor | | C |
| a | | | /_ |
| | | es in square brackets: <i>[total_sales]/[number_of_items]</i> riable in curly braces: <i>{bar1.profit}*2+[profit_jan]</i> | |
| | | Create | cel |

d. The newly created Calculated field gets added under the CALCULATED FIELDS tab.

6.9. Deleting a Data Connection

The users can delete a created connection using the following steps:

- i) Navigate to the Data Connector page.
- ii) Select a data connection.
- iii) Click the '**Delete**' icon.
- iv) A dialog box appears to assure the action.
- v) Click the 'Yes' option to delete the connection.

| CSV | + | Name | Delete Connection | × |
|---------------------|---|----------------|--|----|
| Excel | + | | | |
| Data Service | + | Criteria | Do you want to delete this connection? | |
| Data Science Models | + | | | 20 |
| Data Store | + | Select a conne | | |
| Web Socket | + | | Yes | No |
| Connection-1 [C_1] | | | | |

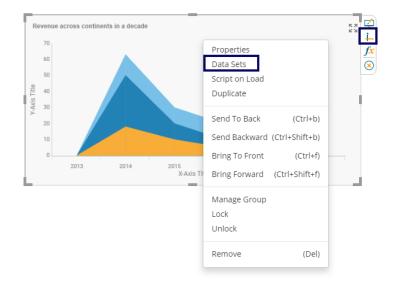

vi) The selected data connection gets deleted from the Data Connectors page.

6.10. Connecting Data Set Connection to a Dashboard Component

- i) Navigate to the Dashboard Canvas.
- ii) Select and drag a charting component into the canvas.
- iii) Click the 'Data Set' 🚣 icon.

OR

Use right click on the dashboard component and click the 'Data Sets' option.

iv) The user gets directed to the Dataset Palette.

6.10.1. Dataset Palette

The Dataset Palette is the window that can be used to configure the dataset fields of a component. Each field has several properties that can be set using this palette.

- a. Map a data connection using the drop-down menu. (Ref. 'Connecting to a Data Source' section)
- b. Drag and drop the required fields as described below:
 - 1. Category: it takes the fields selected as dimensions for the component.
 - 2. Series: it takes the fields selected as measures for the component.
- c. Configure the 'Properties' displayed at the bottom of the window.

| Area1 | $\checkmark f_x \times$ |
|--|---|
| | Connection-1 • C |
| Search | Category |
| Asia | Year |
| Europe | Series |
| NorthAmerica | Asia |
| Year | |

6.10.2. Indicator Tab

The Dataset Palette displays the Indicators tab together with Properties for some components, E.g., Line, Grid. The users can add various data conditions by using the Indicator tab.

- i) Navigate to the Dataset Palette for the selected range of the charting components that contain the Indicator tab.
- ii) Navigate to the Indicator tab.
- iii) Click the 'Add new Condition' icon.

| Line2 | | 4 | f x | × |
|--------------|---------|---------------|------------|---|
| Connections | Connect | tion-1 | • | G |

7. Components

The components are the elements like charts, tables, gauges, metrics which are used to create a dashboard. Users need to drag and drop the components in the canvas and connect them with a data source. Each component contains appearance properties to be configured, which differs as per the component type.

This category includes properties that focus on the appearance of a component.

- i) Navigate to the Designer Canvas.
- ii) Click the **'Component Library**' 🕒 icon from the right edge of the window.
- iii) Various categories of the available charting components get displayed (The 'Charts' category gets selected by default).

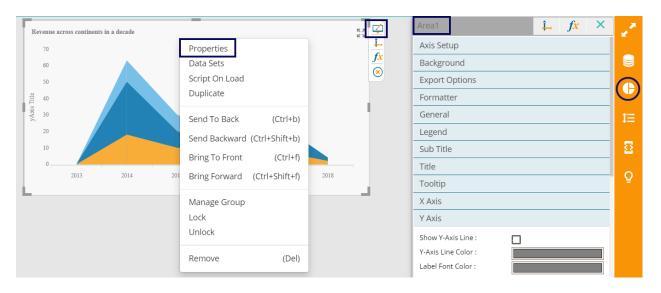

| Search i | n compo | nents | | Q | III × | 1 |
|--|----------|-----------------|-------|-----------|--------------|----|
| LI Charts | Grids | Filters | Advan | 0ther | Custom | |
| | ~~ | | - | | | C |
| A | ea | Ba | ar | Bubl | | t≡ |
| Circu | mplex | Column | | Funnel | | Ø |
| Histo | gram | Inverted Funnel | | 10 | | Q |
| Reference and the second secon | KAN Line | | ap | Mito |) Plot | |
| Miz | Mixed | | e | Project T | imeline | |
| | | | • | M | ٨ | |

- iv) Select and drag a component on the canvas.
- v) Click the '**Properties**' icon OR

Use Right-click on a component and click the 'Properties' option.

vi) The Appearance Properties of the dragged component gets displayed on the right side of the screen.

Note: Explore the Component Gallery section of the BDB Website to know more about each charting component. Use link <u>https://bdb.ai/component-gallery</u> to open the Component Gallery. The users can decide the best pick to visualize their specific business data by going through the below given link as well.

https://08009ad7bf1979094b0b-3488c35d3ab28aac7529e703b5435d94.ssl.cf1.rackcdn.com/BDB%20Documentation%20-%203.0/BDB%20Webite/Dashboard%20Desinger%20Charting%20Components.pdf

8. Dashboard Objects

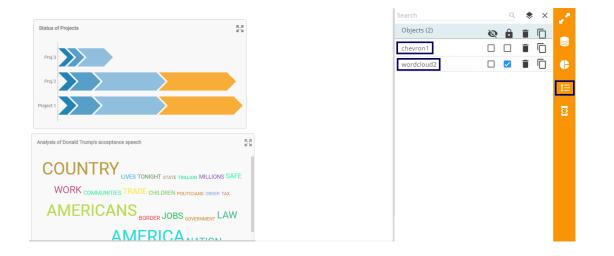

Every component in the dashboard is considered as an object. Object browsers have properties that are used to lock, hide, delete, duplicate, and arrange components on the dashboard.

8.1. Manage Dashboard Components

Every component which is dragged into the canvas gets its properties displayed in the Manage

Component browser window. Click the 'Manage Dashboard Components' 🔲 icon to display the browser window for the dragged Designer components.

E.g. The following image displays two components on the Dashboard (i.e., Chevron and Wordcloud), so the object properties related to those components are displayed on a panel right side. Enable checkmarks in the checkboxes **v** or click on the concerned icon to perform the related action.

8.1.1. Dashboard Object Properties

i) **Hide All** is By clicking on this icon, all the components which are present in the dashboard will be hidden. Users can hide the individual components by enabling the

checkbox ^I provided next to the name of the component.

ii) Lock All a: By clicking on this icon, all the components which are present in the dashboard will be locked, i.e., means components cannot be moved from one place to another. Users can lock the

components individually by enabling the checkbox \blacksquare provided next to the name of the component.

- iii) **Remove** B: By Clicking on this icon, all the components which are present in the dashboard can be deleted. Users can delete the components individually by clicking the remove icon provided next to the name of the component.
- iv) **Duplicate I**: By clicking on this option duplicate component gets produced on the canvas.
- v) **Search:** When the number of dragged charting components increase in a dashboard, it becomes difficult for users to find out the specific component. Use the '**Search**' bar to search for the desired components.

| Becision A Home Untitled x + | | | ± | | 8 | Ţ |

| | | | | | | Q |
| LIVES MILLIONS POLITICIANS | | | | | | |
| NATION LAW HILLARY JOBS SAFE | | | | | | |

9. Data Drill-Down

To drill down deeper into data, the users require to use attributes and values of the components that have been dragged onto the canvas. The data drill-down functionality can be achieved in the following ways:

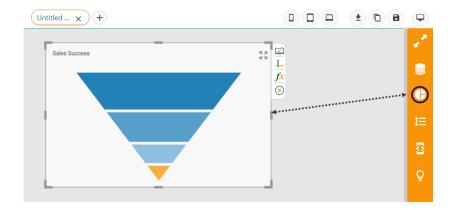

- a) Passing Default Values (Manual Filter)
- b) Performing Dynamic Filtering (through SDK methods)

9.1. Passing Default Values

This section aims to explain how to pass default values in the charts.

E.g., Assume that we have Sales data from some organizations. In this example, we would pass only data of **the years 2014 and 2015**. In the given scenario, we need to perform the following steps:

i) Select a charting component and drag it into the canvas. (in this case, we have dragged a funnel chart)

- ii) Connect an Excel data source of sales data. (Refer to section 7.2. for creating a data source connection using Excel File).
- iii) Click on the Funnel chart's data source connection and select the 'Condition' tab and provide input as '2014, 2015' in the condition textbox (as shown below)

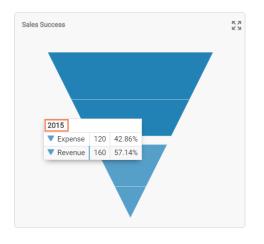

| CSV | + | Name | Sales Data | | | i × | 2 |
|--------------------|---|---------------|-------------------|----------------------|---------|----------|----|
| Excel | + | Browse | | ents_18-07-2019.xlsx | | <u>±</u> | |
| Sales Data [C_1] | Î | Sheet Name | Column | | | • | ¢ |
| Data Service | + | Load At Start | Yes | No | | | t≘ |
| Predictive Service | + | FIELD SET | CALCULATED FIELDS | CONDITION | | | 3 |
| Data Store | + | Fields | | nditions | Actions | | Q |
| Web Socket | + | Expense | | | • | | |
| Merged Data | + | Revenue | | | | | |
| | | Year | 20 | 14,2015 | • 🕑 | | |

- iv) Click the **'Preview'** icon to view the results.
- v) Only data for the years 2014 and 2015 get displayed as per the given condition.

9.2. Performing Dynamic Filtering

This section explains how to perform dynamic filtering using filters and charts. Every component has some attributes and values which can be seen in the **'Component Attributes'** window. The user can pass

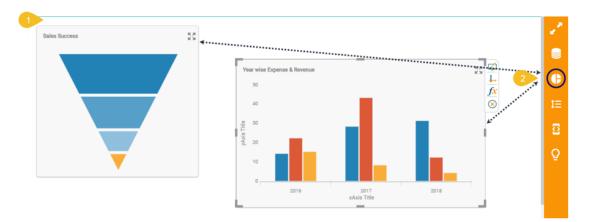

the

values of one component into another component to achieve dynamic filtering functionality.

Scenario: Performing dynamic filtering using a Funnel chart to Column chart

- i) Navigate to the Designer canvas.
- ii) Drag two charting components to the designer canvas using the '**Component Library**' icon (In this case, Funnel and Column charts are dragged to the canvas).

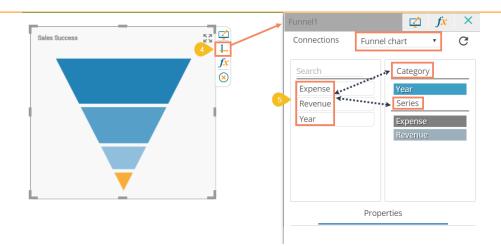

iii) Connect an Excel data source of sales data. (Refer to section 7.2. for creating a data source connection using Excel File).

Note: Use a single data set for both the connections so that they contain the same data while using the data drill.

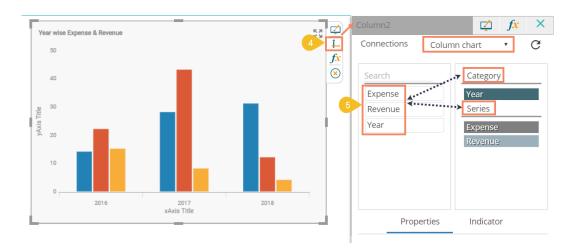

| C | SV | + | Name | Colu | ımn chart | : | | | | × | 2 |
|-----|---|---|---------------|---------------|-----------|--------------------|---|---------|---|------|----|
| 3 E | xcel | + | Browse | owse DD M | | DD Model Data.xlsx | | | | | |
| | Funnel chart [C_1] | Î | Sheet Name | Coli | Column | | | • | ¢ | | |
| | Column chart [C_2] | Î | Load At Start | | Yes | No | | | | | t≡ |
| D | ata Service | + | FIELD SET | CALCULATED FI | ELDS | CONDITION | | | | | 8 |
| Pr | redictive Service | + | | | - | | | | | - 1 | Q |
| D | ata Store | + | Fields | | Cor | nditions | | Actions | | | |
| | | | Expense | | | | • | | | - 14 | |
| W | /eb Socket | + | Revenue | | | | • | | | | |
| | lerged Data //app.bdb.ai/designer/views/designer/desig | + | Year | | | | • | | | | |

- iv) Connect the created data connectors to the respective charting components using the Data Set icon.
- v) Configure the required Dataset Palette fields, as shown below:
 - a. Do the required configurations for the Funnel chart-

b. Do the required configuration for the Column chart-

- vi) Click the 'Component Variables and Script' icon provided to the right side of the canvas.
- vii) Select the Funnel component.
- viii) Follow the below mentioned steps to write the function name:
 - a. Type '**sdk.**' in the given space.
 - b. Use 'Ctrl+Space' keys.
 - c. A function list appears.
 - d. Select the auto-reload function from the pop-up list and use double clicks to add it to the script tab.

| | COMPONENTS | CONNECTIONS | | | | Script | Default field values | <u>(</u>) | × | 2 |
|---|------------|-------------|-----|-----|-------------------|--------|----------------------|------------|---|----|
| | | | Q | 8 1 | sdk.autoReload(); | | | | | |
| | Dashboard | | \$ | | | | | | | ¢ |
| 7 | Funnel1 [| [funnel1] | L 🗳 | | | | | | | t≡ |
| | Column2 [| column2] | | | | | | | 6 | 3 |
| | | | | | | | | | | Q |

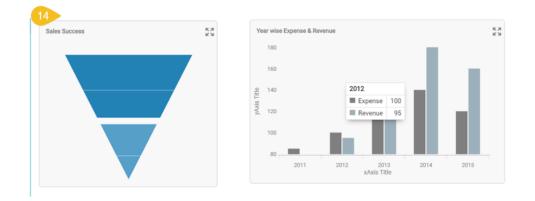

- ix) Select the 'Data Source' icon
- x) Select the data connection details displayed for the Column chart on the right side of the window.
- xi) Click the **'Condition'** option.

- xii) Select the field name using which filtering will be performed (E.g., In this case, using the **'Year'** field we are performing the drill-down action) and pass the condition that connects the Column chart with the Funnel chart (E.g., In this case, {funnel1.year} is used).
- xiii) Enable the 'Actions' checkbox. (as shown in the following image)

| Name | 10 Column chart | | × | 2 |
|---------------|--------------------|------------|------------|----|
| Browse | DD Model Data.xlsx | | <u>1</u> 9 | 0 |
| Sheet Name | Column | | • | ¢ |
| Load At Start | Yes No | | | t≡ |
| FIELD SET | | | | 8 |
| Fields | Conditions | Actions | | Q |
| Expense | | • | | |
| Revenue | | • | | |
| Year | 12 {funnel1.Year} | √13 | | |

xiv) Click the 'Preview' icon to open the preview mode for the concerned components.

- xv) Select a specific year value using the Pie-chart.
- xvi) The sales information for the selected year displays via the Column chart.

10. Scripting Window

BDB offers a scripting mechanism in the Designer plugin to help the users experience the next level of customization in dashboard creation. BDB offers script support at the component level to display the intended UI actions and at the data connection level to apply data related back-end changes. The scripting mechanism makes the creation of complex dashboards easy and quick. The users require basic scripting knowledge to create dashboards using the BDB Designer tool.

This section aims to provide a basic understanding of writing scripts and functionality. **Scenario**: We wish to have a checkbox that, when enabled displays a column chart, and when disabled, shows an area chart. This concept is called **Dynamic Visibility**.

- i) Navigate to the Designer homepage.
- Select the 'Dashboard' option using the 'New' drop-down menu to create a new dashboard.
 OR

Designer + RRR/ Welcome, admin Take a tour 🕂 New 🗸 Workspace 🚊 Manage Simple Drag and Drop UI Highly Interactive and Drill Down Mobile, Tablet and Desktop Views 产 Open 🗸 Drag any chart or grid from the Component Panel Each dashboard can have multiple widgets and Customizable layouts to view the interactive and drop to your designer canvas. It is incredibly intuitive and smooth functionality for designing filters which can be altered in a click to get data analytics at the speed of thought. SDK methods dashboards from phones, tablets, and desktops. Making the data insights accessible all the time for ★ Preferences dashboard. help to achieve the various functional our users. requirements based on the customer needs 💾 Save as Help 🕑 Exit 60+ Components and Themes Advanced Visualizations Import Custom Component Check out our exclusive range of visualization Explore complex business data in the most Incorporate any third-party visualizations to your components to select the most suitable for your data. You can govern the overlook and feel of th simplified way using our advanced visualization components. Avail a series of interactive chartin dashboard, including D3 Charts, DataTables etc.

Click the 'Designer' option given on the header of the homepage.

- iii) The dashboard canvass opens for the Untitled Dashboard.
- iv) Click the 'Component Library' icon.
- v) Drag and drop the 'Checkbox,' 'Column Chart', and 'Area Chart' components into the canvas.
- vi) Click on the '**Properties**' icon next to the Checkbox component.

vii) Set **Checked Value to '1'** and **Unchecked Value to '0'** (as shown below) using the '**General**' properties tab of the Checkbox component.

| Checkbox1 | f <mark>x</mark> × | | | | | |
|----------------------|--------------------|--|--|--|--|--|

| | Merged Data | + | NorthAmerica | | | |
| | | | range | | | |
| | | | ser | | | |

ix) Click on the **'Script on Load'** icon f provided next to the Checkbox component.

x) The script window for the Checkbox component opens.

| COMPONENTS | CONNECTIONS | | 10 Script | Default field values 🛈 🗙 | 2 |
|------------|-------------|---|---------------------|--|----|
| | | Q | 1 | | |
| Dashboard | | ⊄ | | | ¢ |
| Area2 | [area2] | | | | t≡ |
| Column3 | [column3] | | | | 5 |
| Checkbox3 | [checkbox3 | ⊄ | | | |
| | | | | | Q |
| | | | checkbox3 Use Ctri+ | Space for assistance or <u>visit help section</u> for SDK method details | |

- xi) Write the relevant script for the action mentioned above, as explained in the following steps:
 - a. Write the if statement for the script following the order of "changedItem.attributes.Value"
 - b. Pass 'Value==1' (In other words, it suggests that checkbox is enabled)
 - c. Either click the '**Help**' icon ⁽ⁱ⁾ or use '**Ctrl+Space'** keys to get the assistance in writing the script.

| COMPONENTS | CONNECTIONS | | Script | Default field values | 12 0 |
|------------|-------------|---|---------------------------------------|---|----------------------|
| | | Q | 1 if(changedItem.attributes.Value==1) | | |
| Dashboard | | ⊈ | | | |
| Area2 | [area2] | | | | |
| Column3 | [column3] | | | | |
| Checkbox3 | [checkbox3 | ⊭ | | | |
| | | | | | |
| | | | checkbox3 Use Ctrl+Sp | ace ⁱ or assistance or visit help section fo | r SDK method detail: |

d. The 'Designer Scripting Help' window opens.

| | Scripting Help Advanced Scripting |
|---|---|
| I. Auto Reload | ± |
| Method : sdk.autoReload() | |
| Arguments : Not required | |
| This method should be written on Filters/ Grids/ Charts. Those connections will be reloaded automatical | lly which has the filter key in their condition |
| | |
| 2. Reload All Connections | 1 |
| 2. Reload All Connections Method : sdk.reloadAll() | ž |
| | ± |

e. Select the 'Show and Hide' function as per the requirement from the Designer Scripting Help window.

| | | Scripting Help | Advanced Scripting | |
|----|--|----------------|--------------------|---|
| | | | | |
| 14 | 5. Hide Component(s) | | | ± |
| | Method : sdk.hideComponent(["bar_1", "column_2"]) | | | |
| | Arguments : An array of component id's. Here bar_1 and column_2 are the component id's | | | |
| | Method : sdk hideComponent("bar_1") | | | |
| | Argument : Component id as string (Used to hide single component) | | | |
| | | | | |
| 15 | 6. Show Component(s) | | | ± |
| | Method : sdk.showComponent(["bar_1", "column_2"]) | | | |
| | Arguments : an array of component id's. Here bar_1 and column_2 are the component id's | | | |
| | Method : sdk.showComponent("bar_1") | | | |

- f. If the 'Value == 1' (in other words, if the Checkbox is enabled) the Column chart should be displayed. For this to occur,
 - i. Place the 'Hide Component' and 'Show Component' functions under the 'if' function.
 - ii. Pass Area chart value to the 'Hide Component' function.
 - iii. Pass the Column chart value to the '**Show Component**' function to make sure that the Column chart will be hidden when the Area chart is displayed.

| COMPONENTS | CONNECTIONS | | | Script | Default field values | Ð | × |
|------------|-------------|--------|----|--|---|--------|---|
| Dashboard | | Q 2 | 16 | 1 if(changedItem.attributes.Value==1) 2 { 3 sdk.hideComponent(['area2']); 4 sdk.showComponent(['column3']); | | | |
| Area2 | [area2] | Ŧ | | <pre>4 sdk.showComponent(['column3']); 5 }</pre> | | | |
| Column3 | [column3] | | | | | | |
| Checkbox3 | [checkbox3 | ø | | | | | |
| | | | | checkbox3 Use (| Ctrl+Space for assistance or visit help section for SDK method (| detail | S |

g. If the 'Value == 0' (in other words, if the checkbox is disabled), we need to do the reverse of the function that we used earlier. So that when users uncheck Check Box, the 'Area chart' gets displayed and the 'Column chart' remains hidden.

To accomplish this, users need to write the highlighted portion of the script:

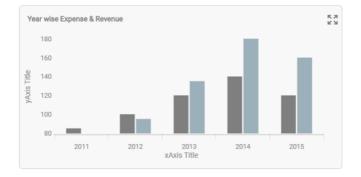

| COMPONENTS | CONNECTIONS | | Script | Default field values 🛈 🗡 |
|----------------------|-------------|--------|--|--|
| Dashboard | | Q ⊈ | <pre>1 if(changedItem.attributes.Value==1) 2 { 3 sdk.hideComponent(['area2']); 4 sdk.showComponent(['column3']);</pre> | |
| Area2 | [area2] | 1 | 5 | |
| Column3 Checkbox3 | [column3] | | <pre>9 sdk.hideComponent(['column3']); 10)</pre> | |
| | L | | checkbox3 Use Ctrl+Spa | ice for assistance or visit help section for SDK method details |

xii) After entering the above script successfully, click the '**Preview**' icon \square to view the results.

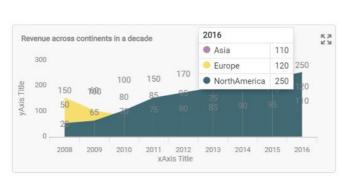

xiii) In the below screen capture, since the 'Checkbox' is checked, the 'Column chart' is displayed.

xiv) By unchecking the 'Checkbox' displays the 'Area chart.'

Label

11. Managing Options for a Dashboard

Manage and share your work with others. This section explains how to edit, save, and publish the dashboards created by users.

Generally created dashboards are saved under a workspace. Based upon the requirement, the users can edit the dashboards by adding some modifications and saving them to the disk. This tutorial explains how to edit, open, and save dashboards.

The created and saved dashboards can be shared among the users for a purpose. There are options provided to move and publish dashboards.

The Below given description helps you how to access those options in the Designer.

- i) Navigate to the Designer homepage.
- ii) Click the 'Manage' option.
- iii) A list of 'Workspaces' gets displayed.
- iv) Choose a workspace.
- v) A list of all the saved dashboards under the selected workspace gets displayed.
- vi) Options provided next to a dashboard name can be used to manage or move that dashboard.

| | Decision Platform | Desig | gner | | | | | | | | |
|---|----------------------|-------|--------------------|----------|---|---|----------------------|-------------|---|---|----|

Options provided to a Dashboard:

| Option | Name | Description |
|-----------------------|-------------------|--|
| I ↑ | Open in Designer | To open a created dashboard in the designer canvas. |
| $\mathbf{\mathbf{O}}$ | Publish to Portal | To publish a created dashboard onto the portal. |
| Ĩ | Remove | To remove the dashboard from the list of saved dashboards. |
| • | Actions | To provide more actions to be applied to the selected dashboard. |

Explaining the Actions Menu:

| Option | Name | Description |
|--------|---------|--|
| | Preview | Opens preview for the selected dashboard |

| ↓ | Export to Local Disk | Exports the dashboard to a local disk |
|----------|----------------------|---------------------------------------|
| 1 | Rename | Renames the dashboard |
| | Move To | Moves the dashboard |

Note: The users can also use the 'Manage' option to manage the created workspaces.

- i) Click the '**Rename**' icon provided next to a workspace to rename the workspace.
- ii) Click the '**Trash**' **i**con to remove a workspace from the list.

11.1. Opening a Dashboard

The users can open the desired dashboard into the designer workspace once they have created and saved it to a workspace.

- i) Click the 'Manage' option on the Designer homepage.
- ii) Select and click on a workspace from the list of Workspaces.
- iii) Select a Dashboard from the list of all the saved dashboards under the selected workspace.
- iv) Click the '**Open in Designer**' 🖬 icon.

| | + New - | Workspaces (2) | Ð | C | Q | Dashboards (2) | Q |

| | 🖒 Exit | | | | | | |

v) The selected dashboard opens in the designer workspace.

Note: The users can also open a dashboard in the designer canvas by using double clicks on the dashboard name from the list of saved dashboards.

11.2. Publishing a Dashboard

Dashboards need to be published for end-users to access them. This section explains the steps to publish dashboards.

- i) Click the 'Manage' option on the Designer homepage.
- ii) Select and click on a workspace from the list of Workspaces.
- iii) Select a Dashboard from the list of the saved dashboards under the selected workspace.
- iv) Click the 'Publish to Portal' 🔷 icon.

| | + New - | Workspaces (2) | ⊕ | C | Q | Dashboards (14) | | | | ۹ |
|---|---------------|--------------------|---|---|---|-----------------|----------|---|---|---|
| 1 | 🚊 Manage | All Dashboards | | | | Group Bar | F | 0 | Î | ÷ |

| testUserGrou | qu 🗌 |
| | |
| | 7 Publish Cancel |

viii) Two success messages appear to assure the completion of the action.

ix) The selected dashboard gets published at the desired place.

Note: For the published dashboard, the below given dialog box appears while clicking the '**Publish to Portal' ()** icon.

- Select an action option out of 'Re-Publish' or 'Publish as New.' Note:
 - a. The '**Republish'** option if selected displays the following details:
 - i. The available version(s) of the published dashboard. The user can select a version to republish it. ii. The selected user(s) or user group(s) gets appeared in the dialog box.
 - b. The 'Publish as New' action allows the user to publish the selected dashboard as new.
- ii) Click the 'Publish' option to complete the action.

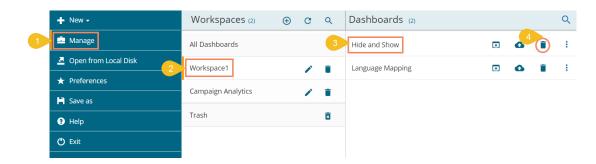

| Publish | | | × |

11.3. Deleting a Dashboard

Users can delete a dashboard by following the steps explained over here.

- i) Click the 'Manage' option on the Dashboard Designer home page.
- ii) Select and click on a workspace from the list of all the Workspaces.
- iii) Select a Dashboard from the list of all the created dashboards under the selected workspace.
- iv) Click the '**Delete**' **I** icon.

- v) A pop-up window appears to confirm the deletion.
- vi) Select the '**Remove**' option from the pop-up window.

| ad | Remove × |
|-----|---|
| arc | |
| 1 | Are you sure to remove the dashboard "Hide and Show"? |
| ۹n | |
| L | Remove Cancel |

- vii) The selected dashboard gets removed from the list.
- viii) A message appears to notify the completion of the action.

11.3.1. Restoring the Deleted Dashboard

By default, the dashboard gets moved to the Trash Workspace. The users can open the Trash Workspace and restore the dashboard to the desired workspace.

- i) Click the 'Manage' option from the Designer homepage.
- ii) Navigate to the 'Trash' workspace created under the list of all the workspaces.
- iii) Select a deleted dashboard that you want to restore and click the '**Restore**' ² icon.

| + New - | Workspaces (2) | Ð | C | Q | Dashboards (1) | Q |

| | | | | | | | | |

12. Saving a Dashboard

Users are provided with multiple options to save a dashboard. All the '**Save**' options are provided on the Header menu bar provided on the Designer Workspace. This section explains all the available options to save a dashboard.

12.1. Save

- i) Click the 'Save' 💼 icon from the Designer canvas header menu.
- ii) A pop-up window appears with the following details:
 - a. Dashboard Name: The name of the selected dashboard gets displayed.
 - b. Workspace: Select a workspace via the drop-down menu.
 - c. Click the 'Save' option.

| Save Dashboard | | × |
|----------------|------------------|--------|
| Dashboard Name | Hide and Show | |
| 2 Workspace | Workspace1 | 0 C |
| | 3 Export Save | Cancel |

d. A success message appears to assure the same.

e. The dashboard gets saved to the selected workspace.

| Workspaces (2) | Ð | G | ۹ | Dashboards (2) | | | | Q |
|--------------------|---|---|---|------------------|-----|---|---|---|
| All Dashboards | | | | Hide and Show | (f) | 4 | Î | : |
| Workspace1 | | / | Î | Language Mapping | (†) | 0 | Î | : |
| Campaign Analytics | | / | Î | | | | | |
| Trash | | | × | | | | | |
| | | | | | | | | |

Note: Click the 'Export' option from the Save Dashboard window to download the selected dashboard.

12.2. Save to Another Workspace

- i) Click the 'Save to Another Workspace' icon from the Designer canvas header menu.
- ii) The 'Save As' pop-up window appears asking to save a copy of the selected dashboard.
 - a. Name: The dashboard name gets displayed as 'Copy_of_ the original Dashboard Name.'
 - b. Workspace: Select a workspace from the workspace drop-down menu.
 - c. Click the 'Save' option.

| Save As | | × |
|-------------|-----------------------|----------------|
| 1 Name | Copy_Of_Hide and Show | |
| 2 Workspace | Campaign Analytics | . C |
| | 3 Save | Cancel |

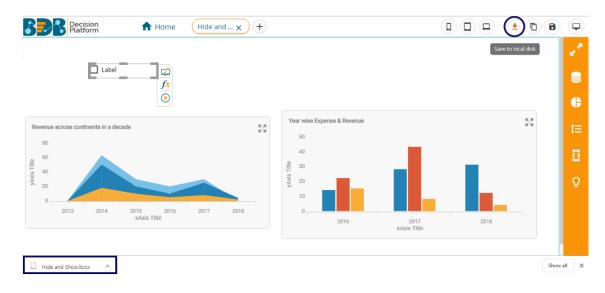

iii) A copy of the selected dashboard gets saved in another workspace.

| Workspaces (2) | Ð | C | Q | Dashboards (3) | | | | Q |
|--------------------|---|---|---|--------------------|----|---|---|---|
| All Dashboards | | | | Copy_Of_Hide and S | ſ | ٥ | Î | : |

| Campaign Analytics | | / | Î | new copy Campaign | ſſ | 6 | Î | : |
| Trash | | | × | | | | | |

12.3. Save to Local Disk

Dashboard which is created by users can be saved to local disk via the 'Save to Local Disk' option.

- i) Click the 'Save to Local Disk' icon from the Designer canvas header menu.
- ii) The selected dashboard gets saved to the local system.

13. Options Provided to Published Dashboards

The user can publish various analytics dashboards to the BDB Platform homepage via the '**Publish to Portal**' option provided in the Dashboard Designer plugin.

- i) The user needs to navigate to the dashboard list provided in a workspace.
 - Access the 'Publish to Portal' option from the list of Dashboards.

ii)

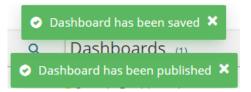

| | igner | | | | | | | | |
|---------------|----------------|---|---|---|------------------|-----|---|---|---|
| + New - | Workspaces (2) | Ð | C | Q | Dashboards (1) | | | | Q |
| 🖻 Manage | All Dashboards | | | | Sample Dashboard | (f) | | Î | : |
